FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: WILDFIRE
FIRE NAME: CALDOR CAENF-024030	OPERATIONAL PERIOD: 8/23-8/24/21 0700-0700

INPUTS

WEATHER SUMMARY:

Temperatures will be in the low 80's with minimum relative humidity 27-32%. Winds will be out of the southwest 4-9mph gusting to 15mph after 11:00. Ridgetop winds will be gusty from the south southwest 9-13mph. Winds will slow overnight returning to the diurnal flow down canyon 2-6mph, and return to the south flow up canyon in the early morning. Nighttime temperature will be in the mid 50's with humidity rising up to 50-55%. Clear air will signal the break up of the inversion and increase potential of fire activity.

OUTPUTS

FIRE BEHAVIOR

FUEL MODEL	RATE OF SPREAD FT/MIN	FLAME LENGTH FT	SPOTTING DISTANCE	PROBABILITY OF IGNITION
TIMBER	8	7	.5 miles	86%
UNDERSTORY	17	10	.5 miles	86%
BRUSH	50	9	.3 miles	86%

GENERAL:

*****Group tree torching is expected with rates of spread up to 64 ft/min*****

Fuels in the area is extremely dry and receptive to ignition. Single and group tree torching will occur due to the abundant low ladder fuels and tight canopies. Increased fire activity will be present in areas where the drainages are in alignment with the winds. Current ERC's and BI's are above the 90th percentile, 1000 hr fuels are below the 3rd percentile. Local live fuel moistures are above critical levels, but brush fields still maintain an abundant amount of dead material within them due to the prolonged drought and will produce moderate rates of spread.

SPECIFIC:

- Spotting will occur throughout the shift due to the southwest winds and abundant surface and ladder fuels in conjunction with very receptive fuel beds.
- Multiple drainages containing heavy fuels are in alignment with the winds and topography and will produce critical rates of spread and long-range ember cast.
- Fire activity will moderate overnight allowing for good windows of opportunity to conduct firing operations and direct line control tactics.

AIR OPERATIONS:

Smoke clearing in the early morning, with increased visibility and increased fire activity by 11:00. Transport winds out of the south southwest 15mph with a mixing height of 6,000' AGL. Expect erratic winds across the ridgetops. Air resources may be limited or ineffective due to the increased winds and reduced visibility.

Sunset 19:45 Sunrise 06:27

SAFETY:

- Getting frequent spot fires across the line.
- Be alert. Keep calm. Think clearly. Act decisively.
- Expect any fire weakened timber to release without warning in the gusty wind conditions.

Fuels and Fire Behavior Advisory Northern California

August 17, 2021 to August 31, 2021

Subject: Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

Discussion: Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify through out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97th percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

DEMOBILIZATION PLAN - SUMMARY CALDOR FIRE INCIDENT CA-ENF-024030

GENERAL INFORMATION

The Demobilization Plan is developed to facilitate the orderly removal and checkout of resources on the incident. By definition, surplus personnel are available for release if they have rested for a minimum of 8 hours, are cleaned up, outfitted and have a vehicle ready to depart to their next destination.

GENERAL GUIDELINES

- **NO RESOURCES WILL LEAVE THE INCIDENT UNTIL AUTHORIZED TO DO SO BY THE DEMOB UNIT.**
- Efforts will be made to ensure that all released personnel arrive at their destination prior to 2200 hours.
- All Resources will arrive at the Demobilizations Unit at their scheduled time Only.
- All government and hired vehicles leaving the incident will have a safety inspection. If a vehicle is within 1,000 miles of a "B" service, it is the responsibility of the resource to contact Ground Support and have an oil change prior to their scheduled demobilization time.
- **All Rental Vehicles will receive a safety inspection prior to leaving the incident.**
- All trainees are to keep their time up to date and report to the Training Specialist with their task books and evaluations prior to completion of the demobilization process.
- All strike team leaders are responsible to call **North Ops at 1-530-224-2466** immediately upon being released from the incident

RESPONSIBILITIES

Unit Leaders will declare resources excess to their **Section Chief**. **Section Chiefs** will declare excess resources to the Planning Section Chief through the **Resource Unit Leader**. This should be done 36 hours in advance of anticipated release. Use the **Declaration of Excess Resources sheet or General Message Form (ICS-213)** to list all excess resources. Include the resource name, request number, name of person, date and time of declared excess, and time in which the resource will be eligible to leave. Send to the **RESOURCE UNIT** where the resource will be determined to be surplus to the incident. Surplus resources will then be able to report to the **DEMOB UNIT**, receive a Demobilization Checkout Form (ICS 221), get the appropriate ICS 221 signatures, and then return the completed ICS 221 to the DEMOB UNIT prior to final release or reassignment. Resources are not to contact **South Ops** or the expanded dispatch center unless instructed to do so by the Demobilization Unit.

RELEASE PRIORITIES

1. **Organized fire departments**
2. **OES engines**
3. **Hired personnel and equipment**
4. **Other agencies (USFS, BLM, etc.)**
5. **Out of region CAL FIRE forces**

- If approached and questioned by the media and or the public, talk about your assignment or task at hand. Remember to wear all the appropriate PPE.
- If needed call for an incident PIO through the chain of command.
- Never speculate, give opinions or speak for others.
- There is no such thing as an "off the record" comment.
