OUTPUTS

FIRE BEHAVIOR

FUEL MODEL	RATE OF SPREAD FT/MIN	FLAME LENGTH FT	SPOTTING DISTANCE	PROBABILITY OF IGNITION
TIMBER LITTER	9	6	.6 miles	88%
UNDERSTORY	22	11	.6 miles	88%
BRUSH	67	11	.3 miles	88%

GENERAL:

BRANCH I... Continued hot material along the control lines will be a source for ember cast and rollout. Be alert for shifting upcanyon/downcanyon winds in the early morning and late evening.

BRANCH 10... Heavy fuels will slowly burnout as at as the fire nears the river. Continued active burning in Div I, with group tree torching and short-range spotting possible.

BRANCH 20... The fire will continue to be active in Div N. Expect spot fires to continue to be found and initiate new fires. Interior islands, heavy fuels, and timber will continue to burn out and threaten the control lines.

BRANCH 30... Hot material will continue to be found near the control lines. Interior islands will have the potential to burn out causing ember-cast that could create new spot fires.

SPECIFIC:

- Erratic winds and fire behavior will be possible in all the drainages, especially those along Hwy 50, Div I, Div N.
- Fuels remain extremely dry. Review the Fuels and Fire Behavior Advisory.
- Spotting from group and single tree torching will continue to be the major source of fire spread.

AIR OPERATIONS:

Limited visibility until the inversion layer burns off early in the morning. Transport winds out of the south 9mph with a mixing height of 5,500' AGL. Air resources may be limited or ineffective due to reduced visibility.

Sunset 19:27 Sunrise 06:36

SAFETY:

-Deceptively quiet areas of large fires. Always keep your situational awareness up.
- On a hillside where rolling material can ignite fuel below you.
- Fire weakened timber, hot ash pits, and stump holes remain all over the incident area.

Fuels and Fire Behavior Advisory

Northern California

September 1, 2021 to September 15, 2021

Subject: Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

Discussion: Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Events with wind have led to extreme rates of spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify throughout the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97th percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

DEMOBILIZATION SAFETY MESSAGE

We would like to thank you for your assistance. We wish you safe travels home or to your next assignment. Below are a few reminders to make your trip safer:

**CALDOR INCIDENT WEST ZONE
RISK ANALYSIS (ICS 215-A)**

DIV	HAZARDOUS ACTIONS/CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	FATIGUE & COMPLACENCY	Don't underestimate the task at hand. Adhere to work/rest cycle for all tasks. Watch for stack-effect of fatigue and exhaustion, REST & plan operations. Be alert for signs of fatigue and distractions; remain engaged. Drink water before, during and after shifts, up to 1.5 gal. per shift. Have the correct radio clone. Know your adjoining forces and FREQUENCIES.
ALL	COVID 19, ILLNESS, & HYGIENE	Adhere to local, state, federal and CDC health guidelines. Maintain social distancing. Wear a mask regardless of vaccination status when in clusters, briefings, chow lines, etc. Report any illness symptoms immediately to a supervisor. Hygiene, hand washing, and disinfecting of surfaces & handles often, including vehicles. Enact practices that protect all assigned resources despite personal opinions. Err on the side of the potential best outcome to protect against all infectious diseases.
ALL	GRAVITY HAZARDS: ROLLING DEBRIS AND SNAGS/ WEAKENED TREES	The ones that haven't fallen yet; look up, look around Identify Hazard Trees . Drought-Stressed Trees are weakened – dry soils provide no support for root systems! Communicate the hazard. Flag and make proper notifications. Use equipment to mitigate hazard trees where feasible. Do not fall trees out of your certification level. Evaluate wind and lean prior to cutting.
ALL	DRIVING HAZARDS	SLOW DOWN! That means ALL resources and agencies! Use headlights – avoid “auto headlight” settings that may not activate in smoke or do not trigger taillights to turn on. Do 360s before moving vehicles. Utilize chocks, spotters, and backers. Be alert for increased civilian presence in repopulated areas. Watch speed through communities; public perception and safety are key. Keep roadways clear for through traffic and park away from travel paths.
ALL	IGNITION POTENTIAL/ FIRE BEHAVIOR	Monitor weather conditions and forecasts. Make sure all personnel receive a briefing. Critically low fuel moistures will contribute to rapid fire growth and rates of spread. Expect spotting in receptive fuel beds adjacent to active burning. Evaluate unburned islands for re-burn potential. Identify escape routes, temporary refuge areas and safety zones.
ALL	MOP UP AND PATROL/ ASH PITS	Use all required PPE at ALL times. Be alert for overhead hazards and uneven terrain. Scout out work areas when under tree canopy and assess risk vs. gain. White ash may indicate deep ash pits and root cavities with hot coals. Use caution while travelling through the burn. Watch for vehicles along roadways.
ALL	STEEP TERRAIN	Watch your footing while hiking in steep terrain. Expect loose/rolling debris, particularly in areas that fire has burned away surface fuels. Maintain Situational Awareness . Reassess Tree hazards frequently in the work area. Watch for trees and rocks falling across roads and fire lines. Avoid working below other personnel and equipment when possible.
ALL	BEARS, REPTILES & BEES	This incident area is home to RATTLESNAKES, bees, and wasps. Be bear aware: secure food, trash and sleeping locations to deter possible interactions. Be cautious with other animals and the hazards associated with each.
ALL	AIRCRAFT OPERATIONS	Monitor air-to-ground frequencies; they are your eyes in the sky. Use air-to-ground frequency to communicate with aircraft. Use clear, concise statements when directing aircraft; CLEAR THE LINE! Do not rely on aircraft: visibility & priorities can change quickly.

DEMOBILIZATION PLAN - SUMMARY CALDOR FIRE INCIDENT CA-ENF-024030

GENERAL INFORMATION

The Demobilization Plan is developed to facilitate the orderly removal and checkout of resources on the incident. By definition, surplus personnel are available for release if they have rested for a minimum of 8 hours, are cleaned up, outfitted and have a vehicle ready to depart to their next destination.

GENERAL GUIDELINES

- **NO RESOURCES WILL LEAVE THE INCIDENT UNTIL AUTHORIZED TO DO SO BY THE DEMOB UNIT.**
- Efforts will be made to ensure that all released personnel arrive at their destination prior to 2200 hours.
- All Resources will arrive at the Demobilizations Unit at their scheduled time Only.
- All government and hired vehicles leaving the incident will have a safety inspection. If a vehicle is within 1,000 miles of a "B" service, it is the responsibility of the resource to contact Ground Support and have an oil change prior to their scheduled demobilization time.
- **All Rental Vehicles will receive a safety inspection prior to leaving the incident.**
- All trainees are to keep their time up to date and report to the Training Specialist with their task books and evaluations prior to completion of the demobilization process.
- All strike team leaders are responsible to call **North Ops** at **1-530-224-2466** immediately upon being released from the incident

RESPONSIBILITIES

Unit Leaders will declare resources excess to their **Section Chief**. **Section Chiefs** will declare excess resources to the Planning Section Chief through the **Resource Unit Leader**. This should be done 36 hours in advance of anticipated release. Use the **Declaration of Excess Resources sheet** or **General Message Form (ICS-213)** to list all excess resources. Include the resource name, request number, name of person, date and time of declared excess, and time in which the resource will be eligible to leave. Send to the **RESOURCE UNIT** where the resource will be determined to be surplus to the incident. Surplus resources will then be able to report to the **DEMOB UNIT**, receive a Demobilization Checkout Form (ICS 221), get the appropriate ICS 221 signatures, and then return the completed ICS 221 to the DEMOB UNIT prior to final release or reassignment. Resources are not to contact **South Ops** or the expanded dispatch center unless instructed to do so by the Demobilization Unit.

RELEASE PRIORITIES

1. **Organized fire departments**
2. **OES engines**
3. **Hired personnel and equipment**
4. **Other agencies (USFS, BLM, etc.)**
5. **Out of region CAL FIRE forces**
6. **Within Region CAL FIRE Forces**
7. **Unit CAL FIRE Forces**

TRAVEL INFORMATION

- If approached and questioned by the media and or the public, talk about your assignment or task at hand. Remember to wear all the appropriate PPE.
- If needed call for an incident PIO through the chain of command.
- Never speculate, give opinions or speak for others.
- There is no such thing as an "off the record" comment.
