Comments /notes on tonight's mission and this interpretation: The appeared to be large growth to the South East above Selad Valley. The was small growth to the North East and the North West as well as the left flank. There were portions of the fire on the Eastside that were hard to connect for true fire area. I found 3 Isolated Heats North East of the main fire. The Eastern most one appears to be in some type of camp ground based on topo map. These have been flagged with Lat and Long lables.
