Comments /notes on tonight's mission and this interpretation: <p>The fire was most active on the North East part of the head with portions of intense heat noted.</p> <p>There was isolated hear on the Southern Portion of the main fire. with what appeared to be isolated heat sources outside the line on the south east corner.</p> <p>There is also a small body of fire located between the two fire North West of the south fire.</p> <p>I believe the two fires are connected however I could not detect enough heat to see where to connect them. With good field we should be able to have them connect on Wednesday IR flight.</p>
