1.2.1.1. Content

**Incident Information** 

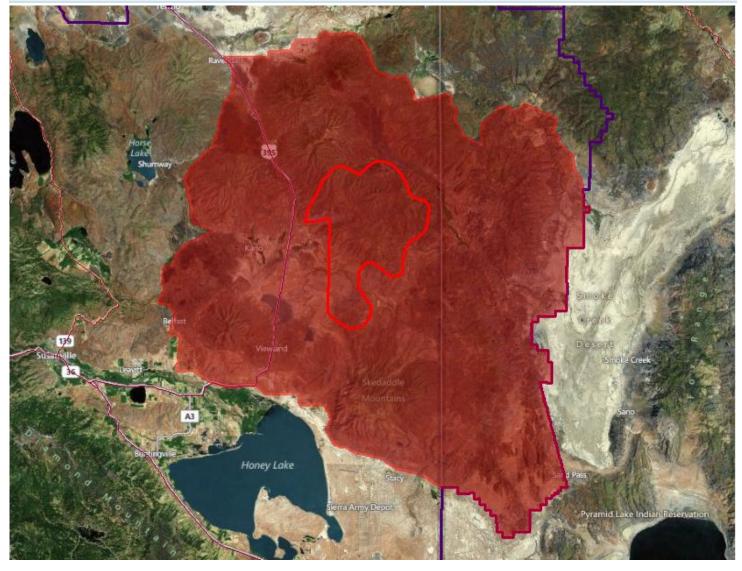

NAME	VALUE
Incident Name	CANOD Rush R-1
Unique Fire Identifier	2012-CANOD-003490
Responsible Unit Name	Northern California Region - BLM
FireCode	G5Z8
Incident Size	57,263 acres
Incident Cause	Natural
Incident Discovery	08/12/2012 18:42
Contained	
Controlled	
Out	
Jurisdictional Unit	CANOD - Northern California Region - BLM
Jurisdictional Agency(s)	BLM
Geographic Area	Northern California
Point of Origin	40.62111 N / 120.15222 W
Owner Name(s)	James Newman, Mark Beterbide, ed merrill, Clif Motheral
Nationally Significant	No

# Incident Objective List

Active	Inactive	Incident Objective
08/13/2012		Provide for the protection of private property, associated improvements, and infrastructure. Prevent the loss of structures where possible.
08/13/2012		Minimize loss of high value habitat to include preliminary priority sage grouse habitat, mule deer winter and summer range, big horn sheep habitat, and antelope range.
08/13/2012		Minimize or mitigate threats to known cultural resources and utilize trained resource advisors / archaeologists to avoid sensitive areas.
08/13/2012		Minimize threats and impacts to riparian areas, critical watershed, and other high value natural resources.
08/13/2012		Minimize impacts to grazing allotments and associated improvements, work closely with permittee(s) to identify concerns.
08/13/2012		Communicate concerns regarding safety, control problems, and significant costs to the Agency Representatives.
08/13/2012		Evaluate all suppression activities to determine appropriate repair.
08/14/2012		Incident objectives are:
		<ol> <li>Keep the fire South of County Road 503 (Horn Road) and the northern boundary of Twin Peak WSA</li> <li>Keep the fire West of Eagle Lake Field Office Boundary / Winnemucca District Boundary (Nevada BLM)</li> <li>Keep the fire North of Wendel Road / Hwy 395</li> <li>Keep the fire East of County Road 536 (Horse Lake Road)</li> </ol>
08/14/2012		

Active	Inactive	Incident Objective
		Minimize impacts to:
		<ul> <li>Private residences and ranches</li> </ul>
		<ul> <li>Various residences along both sides of Hwy 395</li> <li>Shinn Ranch</li> <li>Smoke Creek Ranch</li> <li>Rush Creek Ranch</li> </ul>
		Wilderness Study Areas:
		<ul> <li>Five Springs WSA</li> <li>Twin Peaks WSA</li> <li>Dry Valley Rim WSA</li> <li>Skedaddle WSA</li> </ul>
		<ul> <li>Nobles Emigrant Trail</li> <li>Sage grouse habitat</li> <li>Cultural resource sites</li> <li>Natural springs</li> <li>Grazing allotments</li> <li>Wild Horse Habitat Management Areas</li> <li>Habitat for game and BLM sensitive wildlife/plant species</li> <li>Sierra Army Depot</li> <li>Shaffer Mountain Multi-Agency Primary Communication Site</li> <li>Biscar Wildlife Area</li> <li>Tuscarorra Natural Gas Pipeline and Compressor Station (near Deep Cut Road)</li> <li>Honey Lake Power Cogeneration Power Plant</li> <li>Nevada Energy High Tension Transmission Line</li> <li>BLM Wild Horse Lichfield Corrals</li> <li>Dry Valley OHV Area</li> </ul>
08/14/2012		<ul> <li>Follow the sage grouse protection direction as stated in IM 2011-138.</li> <li>IM will be provided to IMT.</li> <li>Exceptions will be documented and provided to the IMT <ul> <li>Dozer use within WSAs will be allowed per State Director approval</li> <li>Indirect line construction and burning operations will be allowed within Sage Grouse habitat, per Field Manager approval</li> </ul> </li> </ul>
08/14/2012		Implement area, road, and trail closures, as necessary, to protect the health and safety of the public, permittees, contractors, and cooperators. • Shinn Ranch Road • Ramhorn Road • Stoney Creek Road • Deep Cut Road • Smoke Creek Road • Wendel Road • Karlo Road • Brubeck Springs Road • Skedaddle Ranch Road

# Incident Objective List

Active	Inactive	Incident Objective
08/14/2012		Utilize appropriate suppression methods to keep the fire to the smallest possible size where safe and possible to do so.
		<ul> <li>Indirect line construction and burnout operations are allowed</li> </ul>
08/14/2012		Minimize potential for noxious / invasive species being transported into and out of the fire area. Coordiate with Resource Advisor to identify mitigation measures.
08/14/2012		Use Field Office, District, and Incident Management Team Public Information officers to communicate and coordinate to keep the public abreast of the fire status and any safety concerns.

# Incident Requirement List

ActiveInactiveIncident Requirement08/13/2012Provide for the safety of all personnel assigned to the incident. Assure that safety of firefighter, aviation, support personnel, and public is the highest priority at all times for the duration of the incident.08/13/2012Work with the assigned Resource Advisor(s) (READ) to coordinate concerns regarding federally protected species and cultural and natural resources.08/13/2012Suppress wildfire in sensitive vegetation communities (e.g. sagebrush, mahogany, bitterbrush) to reduce the detrimental effects on priority wildlife (sage grouse, mule deer, pronghorn, big horn) dependent on those communities. Firefighter safety is a primary concern due to the high rates of spread in this fuel type.08/13/2012Avoid the application of fire retardant or foam within 300 feet of a stream channel or waterway, when possible, except for the protection of life and property. Aerial application and use of retardants and foams would be consistent with national policy guidelines established by the National Office of Fire and Aviation, as amended.08/13/2012When observable cultural resources are encountered, leave them intact and document there location. If a READ is available on the fire, notify them immediately. If cultural resources are encountered during line construction, avoid where possible based on terrain and safety.08/13/2012Monitor smoke impacts to the public and small communities, isolated ranches that could be affected by the incident.08/13/2012Monitor smoke impacts to the public and small communities, isolated ranches that could be affected by the incident.08/13/2012Monitor smoke impacts to the public and small communities, isolated ranches that could be affected by the

Active	Inactive	Incident Requirement
		Suppression Repair
		<ul> <li>A suppression plan will be prepared and provided to the IMT for implementation on the fire, where appropriate.</li> <li>GPS'ing of the following locations will be conducted and provided to the IMT/BLM Field Office to assist in the preparation of the Suppression Repair Plan: <ul> <li>Where heavy equipment has been/is/will be employed;</li> <li>Where fencing has been broken due to line construction;</li> <li>Where line construction crosses a riparian zone or stream;</li> <li>Where line construction crosses into WSA, wilderness, or ACEC</li> </ul> </li> </ul>
08/14/2012		Utilize as many naturally occurring fire barriers and the existing trail and road system to aid in fire suppression actions when possible.
		<ul> <li>Exception – minimize aerial retardant use on rock outcroppings, where possible</li> </ul>
08/14/2012		All springs will be avoided during line construction, exception where life and property take precedence. There will be no line construction within 100 feet of any spring location, except as noted.
		<ul> <li>If line construction occurs within a spring, the site will be GPS's and provided to the BLM Field Office and the IMT for potential suppression repair.</li> </ul>
08/14/2012		Wilderness Study Areas:
		The use of bulldozers for wildland suppression requires BLM State Director authorization; either directly or through delegation to another authorized official.
		<ul> <li>Approval has been provided by the BLM California Associate State Director. The following</li> </ul>
		<ul> <li>As use is required within the WSAs, Field Manager/Agency Administrator will be notified for approval.</li> <li>Minimize blade depth during line construction.</li> <li>Maintain straight line as possible, as opposed to following exact fire perimeter.</li> <li>Resource Advisors are present during ground disturbance.</li> <li>Use only when operation of mechanized equipment will stop or hinder fire spread.</li> </ul>
		<ul> <li>Aircraft, motorized vehicles, and mechanized equipment may only be used in special or emergency cases involving public welfare of wilderness visitors, protection or wilderness values, or situations that threaten life, property, and public welfare.</li> <li>Suppression actions must be executed to minimize surface disturbance and alterations of the natural landscape. Methods and equipment which least alter the landscape or disturb the land surface are considered the best.</li> </ul>

Active	Inactive Incident Requirement
	<ul> <li>Suppression structures and improvements must be located outside the wilderness, except those that are the minimum necessary to protect life, property, public welfare, and wilderness objectives.</li> <li>Use Minimum Impact Suppression Tactics (MIST).</li> <li>All equipment used for fire suppression activities must be removed upon completion of use and all sites must be rehabilitated to as natural a state as possible.</li> <li>Helibases, helisports, and camps requiring motorized access should be located outside of the wilderness area unless authorized by the Agency Administrator. Where possible, avoid establishing spike or coyote camps in wilderness and wilderness study areas.</li> </ul>

# Strategic Objective List

Unit/FMU	Active	Strategic Objective
CANOD/ CABLM-Eagle Lake-01	06/07/2010	<ul> <li>Minimize wildland fire impacts to Sage Grouse habitat, deer habitat, sensitive plant species and known Cultural Areas.</li> <li>Protect resource values associated with the Skeddadle, Dry Valley, Five Springs, Twin Peaks, Buffalo Hills and Poodle Mountain WSA's.</li> <li>Protect resource values associated with the Buffalo Creek Canyon, Lower Smoke Creek Areas of Critical Concern (ACEC's) and Nobles Immigrant Trail / Military Patrol Road.</li> <li>Protect private property and WUI within this FMU.</li> </ul>

NVCCD	05/24/2011	Fires within the view shed of major communities and major transportation routes shall be managed to minimize visual impacts.
NVCCD/ NV_03_01	07/29/2010	Protect life and private property in the developing wildland urban interface. (CCD FMP pp. 42)
NVCCD/ NV_03_01	07/29/2010	Suppression techniques and tactics will be used that protect life and property in WUI areas <b>and</b> avoid long-term impacts to high value wildlife habitat and sensitive visual resources. Suppression activities will be concentrated between the fire and populated areas. (CCD FMP pp. 42)
NVCCD/ NV_03_01	07/29/2010	Prevent catastrophic fire impacts to private property in WUI areas. (CCD FMP pp. 42)
NVWID	10/01/2011	<ul> <li>To minimize wildfire damage to life, property and resources. (Planning document reference: Paradise-Denio MFP, 1982)</li> <li>Utilize existing barriers/breaks to halt fire spread to the extent practicable.</li> <li>Minimize/mitigate impacts to cultural resources and pristine vegetative communities.</li> <li>Avoid whenever possible burning out unburned islands of native vegetation.</li> <li>Special Fire Mgt. Considerations/Areas: Resource advisors will be required on scene.</li> <li>For resource protection the priorities in order of importance are: threatened and endangered species habitat, sensitive species habitat, and wildlife habitat (i.e. sage-grouse leks, nesting, brood rearing and winter habitat; and Bighorn sheep, Mule deer, and pronghorn habitat).</li> <li>Protect adjacent functioning ecosystems (sagebrush habitat, designated critical habitat, habitats for federally listed, BLM sensitive, state listed, and/or federal candidate species).</li> </ul>

Unit/FMU	Active	Strategic Objective
NVWNA	06/17/2011	2003 WFMP Pg. 7 & 8
		II. RELATIONSHIP TO LAND MANAGEMENT PLANNING AND FIRE POLICY
		B. Fire Management and Tribal Goals and Objectives
		The following proposed Tribal fire management objectives were developed in response to scoping of issues, concerns, identified values at risk, and land management direction, for the Western Nevada Agency and the Tribes served, cooperating agencies, and scientific investigators working in related fire management areas. In priority order:
		<b>Objective 1:</b> Manage wildland fires and fuels to protect life, property, and other identified values by ensuring that no fatalities or serious injuries occur to either the public or firefighters.
		<b>Objective 2:</b> Manage wildland fires so that all resources (natural, cultural, and improvements) are protected from damage by suppression actions and unwanted fire, use minimum-impact suppression techniques whenever possible, and rehabilitate disturbed areas as needed.
		<b>Objective 3:</b> Minimize the adverse affects of smoke from fire management activities to ensure that air quality thresholds are not exceeded.
		<b>Objective 4:</b> Promote understanding, appreciation, and support among tribal leaders, members, and neighbors for the wildland fire management program through tribal information channels and programs in local schools.
		<b>Objective 5:</b> Develop and use tactics and practices to improve plant diversity in wildlife habitats.
		Pg. 8 & 9
		III. WILDLAND FIRE MANAGEMENT STRATEGIES
		B. Wildland Fire Management Goals
		These goals are programmatic in direction and are intended to provide safe and effective implementation of the fire management plan.
		<b>Goal 1</b> : Make firefighter and public safety the highest priority of every fire management activity.
		<b>Goal 2</b> : Suppress all unwanted and undesirable wildland fires regardless of ignition source to protect the public, private property, and natural and cultural resources of the Agency, by using the appropriate management response.
		<b>Goal 3</b> : Manage wildland fires in concert with federal, state, and local air quality regulations.

Unit/FMU	Active	Strategic Objective
		Goal 4: Employment of tribal members for fire management activities. (also EA pg 3 - strategies to meet objectives)
		<b>Goal 5:</b> Facilitate reciprocal fire management activities through the development and maintenance of cooperative agreements and working relationships with pertinent fire management entities.
		<b>Goal 6:</b> Employ prescribed fire and mechanical and/or hand methods to reduce wildland fire hazard around developed areas and adjacent to cultural and historic sites.
		<b>Goal 7:</b> Employ prevention, education, and rehabilitation strategies and techniques for wildland and prescribed fires.
NVWNA	06/17/2011	2003 WFMP Pg. 32
		B. Wildland Fire Suppression (continued)
		8. Rehabilitation Guidelines
		When suppression action is taken, rehabilitation is appropriate. The most effective rehabilitation measure is prevention of impact through careful planning and the use of minimum impact suppression tactics.
		Rehabilitation will be initiated by the Incident Commander or the Natural Resource Officer. Rehabilitation will be directed toward minimizing or eliminating the effects of the suppression effort and reducing the potential hazards caused by the fire:
		<ol> <li>Backfill control lines, scarify, and seed with native species.</li> </ol>
		2. Install water bars and construct drain dips on control lines to prevent erosion.
		3. Install check dams to reduce erosion potential in drainages.
		4. Flush cut stumps and camouflage with soil and moss.
		5. Place cut vegetative materials in random positions.
		6. Position felled and bucked material so as to be least noticeable to visitors, and camouflage where possible.
		7. Restore natural ground contours.
		8. Remove all flagging, equipment, and litter.
		9. Completely restore recreation sites and improved helispots.
		10. Consider and plan more extensive rehabilitation or revegetation to restore sensitive impacted areas.
NVWNA	06/17/2011	2003 WFMP Pg. 29 & 30
		B. Wildland Fire Suppression
		4. Initial Attack

Unit/FMU	Active	Strategic Objective
		The Bureau of Land Management has responsibility for initial attack on Agency lands, but is encouraged to use the following criteria, resources, and procedures:
		a. Priority setting during multiple fire occurrences:
		<ul> <li>Vegetative cover map; any fire with continuous fuels up to and across the boundary or structures.</li> <li>Cultural and historic site map</li> <li>Agency facility map</li> </ul>
		b. Criteria for appropriate initial attack response consistent with GMP/RMP objectives:
		<ul> <li>Public and firefighter safety</li> <li>Protection of cultural, historic, and natural resources</li> <li>Protection of improvements and private property</li> <li>Minimum fire-line construction</li> <li>Available suppression resources and response times</li> <li>Fire danger as determined by fuels, weather, and topography</li> <li>Use aircraft and mechanized equipment only where necessary to support above-listed criteria</li> </ul>
		c. Confinement as a Strategy:
		<ul> <li>A confinement strategy may be selected for initial attack as long as it is not being used solely to meet resource management objectives.</li> <li>Resource benefits may be a by-product, but the strategy must be based upon the criteria listed above.</li> <li>A confinement strategy may also be selected in the WFSA process when initial attack has failed to contain a wildland fire.</li> </ul>
		Pg. 31 - 5. Extended Attack and Large Fire Suppression
		a. Extended Attack Needs:
		Extended attack needs will be determined by considering the following:
		<ul> <li>Threats to life, property, and Agency resources</li> <li>Availability of suppression forces</li> <li>Current and expected fire behavior</li> <li>2</li> </ul>
		Pg. 31 C. Wildland Fire Use *** This option has been rejected for use.
NVWNA/FMZ 2	06/17/2011	2003 WFMP Pg. 11
		This zone located just north of Reno surrounding and including Pyramid Lake. There is a small amount of agricultural land; with the majority being designated open range area.
		, ,

# Management Requirement List

Unit/FMU	Active	Management Requirement
CANOD/ CABLM-Eagle Lake-01	06/07/2010	Heavy equipment use within this FMU will need special approval in WSA's , Areas of Critical Concern (ACEC's) and the Nobles Immigrant Trail/Military Patrol Road.
CANOD/ CABLM-Eagle Lake-02	06/07/2010	Heavy equipment use within this FMU will need special approval in the North Dry Valley Areas of Critical Concern (ACEC).
CANOD/ CABLM-Eagle Lake-04	07/25/2010	Heavy equipment use within this FMU will need special approval in the Eagle Lake, Susan River and Willow Creek Areas of Critical Environmental Concern (ACEC) and the Tunnison WSA.
CANOD/ CABLM-Eagle Lake-05	06/07/2010	Heavy equipment use for suppression efforts within this FMU will need special approval in the Pine Dunes ACEC.
CANOD/ CABLM-Eagle Lake-06	06/07/2010	Heavy equipment use within this FMU will need special approval in the Tunnison and Skeddadle WSA's, Willow Creek Area of Critical Environmental Concern (ACEC) and the Nobles Immigrant Trail.
CANOD/ CABLM-Eagle Lake-07	06/07/2010	Heavy equipment use within this FMU will need special approval in the Tunnison WSA , Areas of Critical Concern (ACEC's) and the Military Patrol Road
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	<b>District Manager or Field Office Manager approval</b> is required for dozer use in ACECs and special designation areas.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	In areas where cultural sites are known or suspected to occur, heavy equipment use will not be allowed.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Provide for protection of "Values at Risk" or "Communities at Risk" from wildland fire.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Large islands of remaining vegetation between the fire line and already burned areas will not be "burned out", as these areas become extremely important to wildlife and for post fire seed sources for years following a large fire. This same rationale can be applied to snags and logs which are used by many birds and small mammals. Cold trail and leave intact wherever possible.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Provide for firefighter and public safety.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Except where human life and private property are threatened, wildland fire managers will request and work closely with, a Resource Advisor for all wildland fires exceeding or expected to exceed initial attack suppression efforts.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Fires occurring in Special Management areas (ACEC and or WSA) and known cultural sites will require notification to the on-duty Resource Advisor (READ).
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Provide for fire suppression efforts commensurate with human and resource values at risk.

# Management Requirement List

Unit/FMU	Active	Management Requirement
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Fire retardant will not be applied within 300 feet of streams, wetlands, ponds, springs, or riparian areas.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Tailor strategies and tactics to avoid areas with significant constraints including critical wildlife habitat, T&E species, areas of soil instability, areas with cultural resource value and sensitive plant communities.
CANOD/ CABLM-Eagle Lake-ALL	06/07/2010	Provide aggressive initial attack along the wildland urban interface to protect life and property, and for in-holdings throughout the FMU.
CANOD/ CABLM-Eagle Lake-	06/07/2010	<b>BLM State Director approval is required for the use of Dozers</b> in BLM Wilderness and Wilderness Study Areas.
Wilderness		<b>District Manager or Field Office Manger approval is required</b> for use of other mechanical equipment in Wilderness or WSA, including aircraft, motorized vehicles, chainsaws, pumps, other mechanized equipment, helispots, and spike camps.
		Suppression actions within wilderness and wilderness study areas must be executed to minimize surface disturbance and alterations of the natural landscape. Use MIST protocols within wilderness and wilderness study areas, as described in the Incident Response Pocket Guide.
		Fire camps, support facilities, and helibases must be located outside the wilderness.
		Approved spike camp operations or helispots within wilderness and wilderness study areas must be removed upon completion of use and all sites must be rehabilitated to as natural a state as possible.
		Lop and scatter any cut brush or tree limbs. Cut stumps and brush stobs flush with ground and camouflage with organic matter.
NVCCD	05/24/2011	Cultural and paleontological resources will be protected to the maximum extent practicable, consistent with other resource values. (CCD CRMP Cul-1.1) Except in cases of <b>immediate</b> threat to life and property, consult with a resource advisor prior to initiating suppression strategies that create significant soil disturbance (dozers, etc) to protect sensitive habitat and cultural resource values.
NVCCD	05/24/2011	Firefighter and public safety is always the first priority.
NVCCD	05/24/2011	Avoid surface disturbing fire suppression activities in sensitive drainages, wetlands, and riparian areas. Do not apply retardant or other fire suppressants on riparian vegetation or within 100 feet of surface water.
NVCCD/ NV_03_01	07/29/2010	In the event of multiple resources at risk and suppression/protection prioritization, the following hierarchy shall be used:
		<ol> <li>Developing WUI areas are the first priority.</li> <li>Protection of high value Sage grouse habitat, Mountain quail habitat, and mule deer winter range.</li> </ol>

Unit/FMU	Active	Management Requirement
		<ol> <li>Recently burned areas susceptible to or dominated by cheatgrass and areas where fire rehabilitation/stabilization activities have occurred.</li> <li>Protection of forage values for wild horse herd management areas.</li> <li>Major watersheds where more than 1/4 of the area has recently burned.</li> <li>Sensitive cultural and paleontological resources.</li> <li>(CCD FMP pp. 42)</li> </ol>
NVCCD/ NV_03_01	07/13/2010	There are numerous occupied Sage grouse and Mountain quail sites within the FMU. In order to preserve habitat values, avoid firing unburned islands in all vegetation types. (CCFO FMP pp. 42-43)
NVWNA	06/17/2011	2003 WFMP Pg. 20
		1. Western Nevada Agency Fire Management Unit (s)
		<ul> <li>b. Strategic and Measurable Fire Management</li> <li>Objectives</li> </ul>
		1. Ensure that all wildland and prescribed fire operations sustain no injuries to members of the public or firefighters.
		<ol><li>100% of all prescribed fires are conducted consistent with Federal, State, and local smoke management requirements.</li></ol>
		3. Manage suppression actions so that rehabilitation costs are less than 10% of suppression costs.
		c. Management Considerations
		These constraints, considerations, or decision criteria will influence all fire management activities within the fire management unit.
		1. No unacceptable impacts to cultural resources or threatened and endangered species.
		2. Ensure socio-political economic impacts, including wildland urban interface (WUI) are considered in developing implementation plans.
		3. Ensure that the public, organizations, and cooperating agencies are aware of any suppression or prescribed fire operation that may have an impact on them.

# 1.4. Course of Action

## 1.4.1. Content

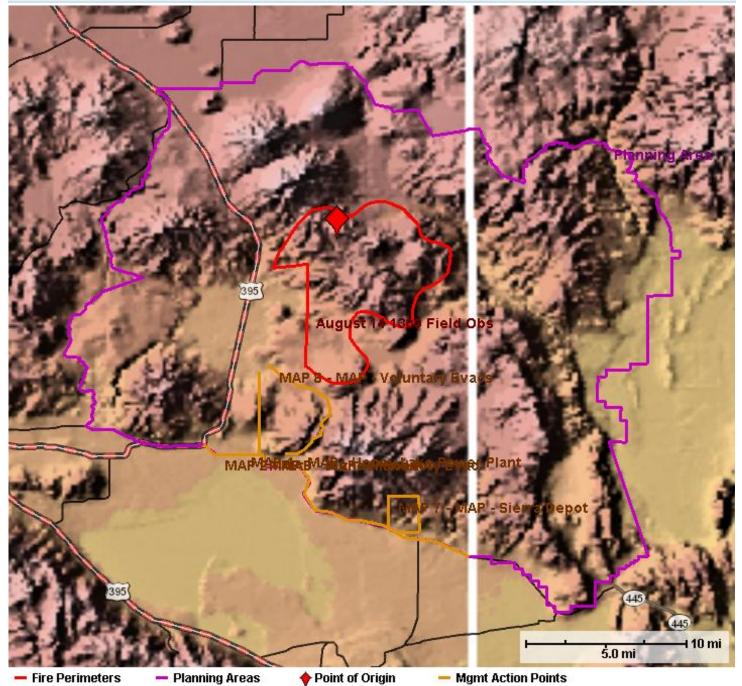

# **Estimated Cost**

NAME	VALUE
Estimated Cost	\$4,750,000
Method(s) Used	Other

# Course of Action

Active	Inactive	Action Item
08/13/2012		Follow the planned initial response.
08/13/2012		Apply direct attack and indirect attack tactics to minimize loss of and/or impacts to critical habitat for sage grouse, mule deer, pronghorn, and big horn sheep.
08/13/2012		Where steep, treacherous terrain results in unacceptable risk exposure to firefighters, use previously identified contingency lines as primary containment lines for indirect line and burnout operations.
08/13/2012		Develop and implement structure protection plans to protect inhabited residences and ranch's infrastructure.
08/13/2012		To the extent possible, locate wildfire suppression facilities (i.e., base camps, spike camps, drop points, staging areas, heli-bases, etc.) in areas where physical disturbance to sage-grouse habitat can be minimized. These include disturbed areas, grasslands, near roads/trails or in other areas where there is existing disturbance or minimal sagebrush cover.
08/13/2012		Power-wash all firefighting vehicles, to the extent possible, including engines, water tenders, personnel vehicles, and ATVs prior to deploying in or near sage-grouse habitat areas to minimize noxious weed spread.
08/13/2012		Minimize unnecessary cross-country vehicle travel during fire operations in sage-grouse habitat.
08/13/2012		Minimize burnout operations in key sage-grouse habitat areas by constructing direct fireline whenever safe and practical to do so.
08/13/2012		Utilize retardant and mechanized equipment to minimize burned acreage.
08/13/2012		As safety allows, conduct mop-up where the black adjoins unburned islands, dog legs, or other habitat features to minimize sagebrush loss.
08/14/2012		Utilize appropriate suppression methods to keep the fire to the smallest possible size.
		<ul> <li>Use of indirect line construction and burnout operations is allowed</li> </ul>
08/14/2012		Scout for contingency lines on all flanks of the fire.
08/14/2012		<ul> <li>dog legs, or other habitat features to minimize sagebrush loss.</li> <li>Utilize appropriate suppression methods to keep the fire to the smallest possible size.</li> <li>Use of indirect line construction and burnout operations is allowed</li> </ul>

Deactivated	

# Condition

Fire burns across Wendel road, southern boundary of the Planning Area.

# Actions

A new decision will be required and additional management requirements.

Begin notification for evacuation of scattered private residences.

• Structure protection of scattered primary residence and the Amedee Hot Springs Ranch.

Sierra Army Depot will need to be notified.

Contact SIFC to implement response for structure protection.

Unified Command may be implemented with local fire protection agencies.

### Resources

#### Management Action Point 3

NAMEVALUEIncident NameCANOD Rush R-1CostShapeActivated08/14/2012Deactivated

# Condition

Fire burns to within one miles of the Tuscarorra Natural Gas Compressor.

# Actions

Implement point protection around the Compressor site.

No dozers to the north or south side of the site due to the location of the pipe line that runs north/side into the compressor. The pipe line is not deep enough underground to withstand heavy equipment travel across the pipe.

Heavy equipment (e.g. dozers) can only cross the underground pipe line on compacted existing roads.

Activated	08/14/2012
Deactivated	

## Condition

Fire burns within 3 miles of the Honey Lake Power Plant.

# Actions

Notify the Honey Lake Power Plant Manager and/or Operations Manager. They will implement a sprinkler system to potentially reduce impacts to the facility.

### Resources

NAMEVALUEIncident NameCANOD Rush R-1CostShapeActivated08/14/2012DeactivatedValue

# Condition

Fire burns adjacent to / under / along the Nevada Energy High Tension Transmission Line adjacent to HWY 395.

Impacts to the transmission line are predicted to be primarily dense smoke that may cause arcing and/or shorts in the line.

Note: The primary concern is firefighter safety.

### Actions

Notify Nevada Energy Company.

Request that the High Tension Transmission Line be de-energized during suppression activities under and adjacent to the transmission line.

### Condition

There is a high potential that fire will burn near primary residences within the Planning area (as noted within Incident Objectives).

### Actions

Implement point protection of structures, if safe to do so based on fire intensity, defensible space around the structure(s), and availability of an escape route / safety zone if conditions require their use.

### Resources

# 1.5. Validation

### 1.5.1. Content

### Validation History

Date (CDT)	User	Action	Comments
08/14/2012 14:53	Newman, James	Decision created	
08/14/2012 20:40	Newman, James	The proposed Course of Action will satisfy the Objectives	Full and aggressive suppression of this fire is clearly indicated due to season severity, time of year, values at risk, forecasted weather, and logistical/operational needs to support the expected need of suppression resources required to contain the fire. Due to these factors combined with the fire behavior that was exhibited along with expected fire behavior in the previous and upcoming burn periods, a Type 2 IMT is managing the RUSH fire.

#### Relative Risk

NAME	VALUE
Relative Risk	High
Duration	Medium
Saved By	Newman, James
Completed	08/13/2012 16:40 CDT

# **Relative Risk Notes**

Due to fire burning in the middle of the historic fire season and the topographically challenging area the fire is burning within, a Type 2 Incident Management Team is needed to manage this incident for the Eagle Lake Field Office, BLM California.

# Hazards Notes

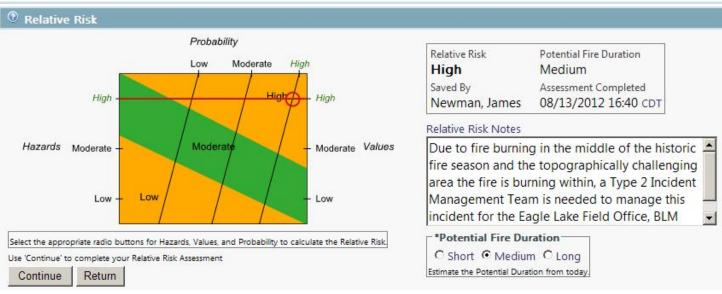

The fire is continuing to experience rapid growth daily. Non-normal weather conditions for this time of year. Higher potential for large and long duration fires. Live fuel moistures are lower than normal for this time of year.

# **Values Notes**

The fire is currently burning in priority habitat for sage grouse, with the potential to impact larger areas of sage grouse priority and general habitat, containing active lek sites. Priority sage grouse throughout the whole planning area. Cultural resources sites located throughout the planning area.

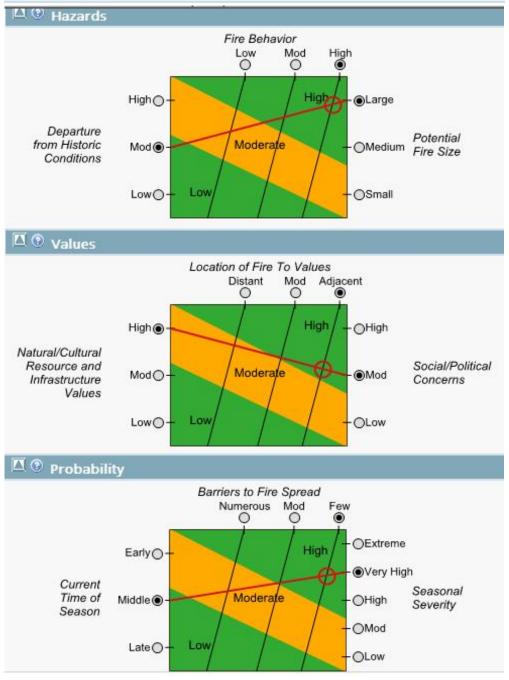

# **Probability Notes**

There are not many natural and man-made barriers around the current fire perimeter. The seasonal severity is very high based on the low live and dead fuel moistures through the planning area.

#### Relative Risk Main Table

### Relative Risk Sub Tables

### What are the critical values at risk?

### Values at Risk – Within the Planning Area

- Private residences and ranches
  - Various residences along both sides of Hwy 395
  - Shinn Ranch
  - Smoke Creek Ranch
  - Rush Creek Ranch
  - Wilderness Study Areas:
    - Five Springs WSA

- Twin Peaks WSA
- Dry Valley Rim WSA
- Skedaddle WSA
- Nobles Emigrant Trail
- Sage grouse habitat
- Cultural resource sites
- Natural springs
- Grazing allotments
- Wild Horse Habitat Management Areas
- Habitat for game and BLM sensitive wildlife/plant species
- Sierra Army Depot
- Shaffer Mountain Multi-Agency Primary Communication Site
- Biscar Wildlife Area
- Tuscarorra Natural Gas Pipeline and Compressor Station (near Deep Cut Road)
- Honey Lake Power Cogeneration Power Plant
- Nevada Energy High Tension Transmission Line
- BLM Lichfield Corrals
- Dry Valley OHV Area

### Values at Risk – Outside the Planning Area

- · Scattered private residences and ranches
  - Town of Doyle
  - Town of Herlong
  - Sierra Army Depot additional lands south of Wendel Road
  - Wandering Skipper habitat
  - State Wildlife Areas
    - Doyle
    - Honey Lake
    - Fort Sage OHV Area
    - BLM Nevada, Carson City District DPA
    - Plumas National Forest

### What is the chance the critical values will be impacted, and if so what are the consequences?

Yes, critical values have been impacted and will continue to be impacted as the fire continues to spread.

The following are the affected critical values and the current consequences due to fire spread:

- Private residences and ranches
  - Loss of / damage to primary residence.
  - Displacement of individuals/families to evacuation centers or for longer periods based on damage to homes
  - Loss of revenue from loss of livestock and/or infrastructure

- Wilderness Study Areas:
  - · Loss of wilderness values will continue as the fire continues to spread
  - Loss of characteristics for extended periods based on severity of suppression activities
- Nobles Emigrant Trail
  - Loss of characteristics for extended periods based on severity of suppression activities
  - Impacts to visual qualities
  - Potential impacts to recreation experiences
- Sage grouse habitat
  - As the fire continues to spread, there will be a continual loss of pristine habitat for sage grouse
  - There will be continued affects to sage grouse within active leks that are being lost due to fire spread; and indirect effects from suppression activities and smoke.
  - Cultural resource sites
    - Loss of non-replaceable historical structures
- Natural springs
  - Sedimentation into springs due to loss of ground cover
- Grazing allotments
  - Loss of forage will continue as the fire burns through allotments
  - Impacts to springs, that are water sources for cattle, through the use of water for suppression activities and future sedimentation into springs due to loss of ground cover
  - Impacts to and loss of springs that are water sources for cattle through impacted from active burning.
  - There will be impacts to cattle within the affected allotments being displaced to adjacent allotments. This will also impact cattle within the adjacent allotments to completion for limited forage and water.
  - Loss of range allotment structures (e.g. fences, salt licks, etc.)
- Wild Horse Habitat Management Areas
  - Loss of forage will continue as the fire burns through the HMA.
  - Impacts to springs, that are water sources for wild horse, through the use of water for suppression activities and future sedimentation into springs due to loss of ground cover
  - Impacts to and loss of springs that are water sources for wild horse through impacted from active burning.
  - There will be impacts to horses within the HMA being displaced to adjacent HMA areas. This will also impact horses within the adjacent HMAs to completion for limited forage and water.
- Habitat for game and BLM sensitive wildlife/plant species
  - Long term loss of habitat (e.g. breeding, browse, brood rearing, travel corridors

- Sierra Army Depot
  - Danger to firefighters and the public from possible unexploded ordinance in the area
- Shaffer Mountain Multi-Agency Primary Communication Site
  - Loss of communication in the local area for multiple agencies including: Office of Emergency Services, CalFire, Lassen County and the Bureau of Land Management
  - · Loss of the back-up communication channel for radio traffic from the Rush Fire to SIFC
  - Biscar Wildlife Area
    - Loss of upland game bird and water fowl nesting habitat.
    - The area is co-managed with California Department of Fish and Game
- Tuscarorra Natural Gas Pipeline and Compressor Station (near Deep Cut Road)
  - · Possible loss of a critical transfer station on the pipeline
- Honey Lake Power Cogeneration Power Plant
  - Possible involvement of the chip pile
  - Damage to this transmission line will result in loss of revenue to the power company each day the line is not providing service to customers.
  - Smoke is continuing to cause shorts and arcing.
  - Safety of suppression resources working under and adjacent to the transmission line is a significant safety concern.
  - 0
- BLM Lichfield Corrals
  - Loss of a critical corral for the holding of wild horse and burros
- Dry Valley OHV Area
  - Impacts to OHV users that will be displaced as the fire burns though the OHV area
  - Impacts to OHV users during suppression repair and potentially ES&R activities.

# 1.6. Rationale

### 1.6.1. Content

Due to fire burning in the middle of the historic fire season and the topographically challenging area the fire is burning within, a Type 2 IMT has been ordered and will be managing this incident for the BLM Eagle Lake Field Office.

### DOZER APPROVAL

The BLM California Associate State Director has approved the use of heavy equipment within all five WSAs that are either currently being impacted or may be impacted by this fire. This approval is based on the following:

- As use is required within the WSAs, Field Manager/Agency Administrator will be notified for approval.
- Minimize blade depth during line construction.
- Maintain straight line as possible, as opposed to following exact fire perimeter.
- Resource Advisors are present during ground disturbance.
- Use only when operation of mechanized equipment will stop or hinder fire spread.

Is the wildfire continuing to meet the strategic objectives, management requirements, incident objectives, and incident requirements?

Yes.

The fire is being managed for full suppression.

Has the Relative Risk Assessment changed (higher or lower), which would alert the agency administrator to change or modify the current strategy or decision?

No

Is the risk still commensurate with the potential benefits?

Yes

Is the fire expected to burn outside the current Planning Area?

No

The fire did burn out the previous Planning Area boundary on the southern perimeter.

It is unknown at this time if the fire will continue to burn outside of the new Planning Area. The observed and predicted fire behavior has not changed and will continue for the next several days.

Currently there is a lack of available resources to be assigned to this incident based on the large number of active fires across California and the western states. Until adequate suppression resources are provided to the incident, the fire will continue to spread to the east/northeast and south/southeast based on predicted weather and fuels continuity and topography.

Additional intel is being obtained by the IMT. The planning area will be reviewed based on new intel to determine if the existing boundary is adequate or a new boundary will need to be created.

There is and will continue to be later afternoon thunder cell activity with predicted dry lightning. There is a prediction that after today, the thunder cells may begin to have more moisture.

Is the fire behavior modeling completed consistent with the current fire behavior, spread, and intensity that is being observed on the wildfire? Have any of the fire behavior or weather prediction products expired?

Yes.

Modeling has been completed for 1 to 4 days Near Term analysis. It displays significant growth of the fire perimeter, primarily to the North and South.

An FSPro analysis was completed based on the fire perimeter from 8/14. The results are consistent with the current fire behavior, spread, and intensity that is being observed on the wildfire.

No.

Current weather forecasts are updated daily by the IMT IMET.

Has the intensity and spread of the wildfire exceeded the original assumptions and risk assessment expectations?

Yes.

The fire continues to experience significant spread rates and distances across control lines during daily thunder cell activity. This will continue until either weather conditions change or additional suppression resources become available in numbers and types to construct control lines along the head/flanks of the fire during periods of minimal fire spread and flame length.

Have any of the Management Action Points (M.A.P.s) been breached or threatened since the last Periodic Assessment? If so, were they implemented effectively and documented? Have new M.A.P.s been developed?

Yes.

The M.A.P from the previous Decision has been breached along the Smoke Creek Road.

Several new M.A.P.s have been created based on the fire growth and direction experienced after the publication of the last decision.

Is there other proximate fire activity that may influence the safety of firefighters and/or the public and/ or influence the intensity and spread of the wildfire the agency administrator is assessing?

Yes.

There are a large number of large fires within California, Nevada, and Oregon both on federal lands and non-federal lands that are also experiencing extreme fire behavior. Additional

suppression resources are currently unavailable in large numbers to assist in the suppression of this fire.

Currently, SIFC has activated the lighting plan around the fire area. New fires are likely if lightning occurs due to predicted dry lighting and lack of large numbers of initial attack resources.

Are there any other factors or issues that may influence the original decision on the wildfire, which would change or require the decision to be modified?

Yes.

- Daily dry lighting may ignite new fire starts adjacent to the existing fire perimeter that may alter containment tactics.
- Reassignment of incident resources to assist in initial attack within BLM DPA, CAL FIRE DPA, and/or local response areas.

Is the current management organization adequate or is span of control exceeded?

Yes.

The current management organization is adequate for the complexity of the fire at this time. The issue is that there are not adequate numbers of resources available to minimize acres burned.

Is the estimated initial overall cost of the wildfire exceeded by current estimates due to an increase in wildfire activity and complexity?

No.

The current and expected costs are expected to be stay within the threshold of \$4.75 million. The threshold is not expected to be exceeded due to the lack of suppression resources (ground resources, aviation assets) that are predicted to not be assigned to this incident within the foreseeable future based on fire activity throughout the western states.
