<b>Comments /notes on tonight's mission and this interpretation:</b> <p>Most of the fire growth was noted on the South West shoulder of the fire will a little growth to the South East and some due North.</p> <p>There appears to short range spots just ahead of the main fire. I found a body of fire almost 2 miles ahead of the main fire fire and this is noted with Lat and long. and is North East of the fire.</p>
