Comments /notes on tonight's mission and this interpretation: <p>There was large growth on the North end of the fire. I could not find place to complete the polygon for all the areas burning to the North.</p> <p>There was also growth seen on the South end of the fire as well.</p> <p>There was a little growth along the South West edge.</p> <p>There was one isolated heat of interest on the left shoulder of the fire, this has been noted with a lat and long.</p> <p>Depending on expected fire growth next period I would recommend expanding the IR scan box.</p>
