

7 Day FPRO analysis simulating 1500 fires. Weather station used for ERC; Bighill RAWS, weather station for winds Backbone RAWS (local intel was that Backbone RAWS captured historical late season east winds best). Ignition source for simulations was the fire growth from 09/11 morning IR to 09/11 nighttime IR. Model assumes no suppression, although fire perimeter was masked to reflect unburnable fuels and 2009 Backbone fire area was masked to reflect fuel model 181.

Analysis: 0912 fs pro 7 day 1500
Analyst: Amy Ziegler
Fires: 1500

RAWS: ERC=Bighill, Winds=Backbone
Duration: 7 Days

SRF Corral Complex Fire Spread Probability 09/12 - 09/19
