Fire Growth from 09/12 - 09/13, used as ignition for fire simulation

4 Burn Periods, 11:00-17:00, nosuppression active

09/13

09/14

09/15

09/16

SRF Corral Complex

Nearterm Fire Behavior

09/13 - 09/17

Nearterm fire behavior analysis, 4 day and 8r burn window each day 11:00-17:00. Bighill RAWs used for weather and 7 day conditioning. Model assumes no fire suppression. Ignitions source was the fire perimeter growth from 09/12 - 09/13 as shown from IR flights. Model assumes no fire suppression, although earlier day's perimeter was masked as unburnable fuels to prevent simulation within already burned areas.

**Firelines on the map were retrieved from the NIFC FTP site; They were dated 09/10 and were the last recorded firelines on the site.
