<b>IRIN Comments on imagery:</b> good imagery with some edge distortion		<b>Weather at time of flight:</b> Clear	<b>Flight Objective:</b> heat perimeter
<b>Date and Time Imagery Received by Interpreter:</b> Sept 2, 2017 0030 PDT		<b>Type of media for final product:</b> shapefiles, pdf, kmz, log  <b>Electronic file sent to:</b> /incident_specific_data/calif_n/!2017 FEDERAL_Incidents/CA-KNF-6098_Eclipse_Complex/IR/20170902	
<b>Date and Time Imagery Delivered to Incident:</b> Sept 2, 2017 0200 PDT			
<b>Comments /notes on tonight's mission and this interpretation:</b> I started with the previous nights perimeter. The imagery was fine for mapping purposes, the northern most fire Young had some distortion ever the intense heat was visible. The Young Fire is still separate from the much larger Oak fire.
