Comments /notes on tonight's mission and this interpretation: Started interpretation with perimeter provided by the incident. No intense heat was detected. The southeastern portion has some scattered heat islands and isolated heats. The northwest portion is scattered heat throughout. Northern portion where firing operation occurred is cooling at the edge and scattered towards the interior. Most acreage growth due to incident team filling a burned meadow that had been called unburned. Fire remains west of Hwy139 and north of Hwy 299/139.
