<b>Date and Time Products Delivered to Incident:</b> 0200 PDT 8/11/2018			
<b>Comments /notes on tonight's mission and this interpretation:</b>  Started interpreting tonight using IR perimeter delivered 8/10.  The Murphy perimeter did not change since yesterday. There is no intense heat and only one area of scattered heat at the north/upslope portion of the fire. There are a few isolated heat sources within the perimeter.  Two isolated heat sources were noted away from the fire that do not appear to be associated with the incident: <ul style="list-style-type: none"> <li>• one was at Campbell lake, about 4 miles west of the perimeter.</li> <li>• The other was in Belden, about 2 miles east of the perimeter.</li> </ul> Since these two are not associated with the fire, they are not on the incident map. They are present in the shapefile and kmz.
