<b>Comments / notes on tonight's mission and this interpretation:</b> <p>Tonight's mapping used the previous night's IR as a base, with perimeter additions provided by the incident GISS including infill of interior islands mostly in the vicinity of Papouse Peak.</p> <p>Perimeter growth was mapped primarily along the southern perimeter. Additional growth was mapped in the vicinity of Dry Flat, where previous firing operations continue to show additional depth. Areas of growth in this area included pockets of intense heat. Intense heat was also mapped along the fire perimeter in the south of Papouse Peak, along the fire's edge in Div G., and on the western perimeter near Wheeler Peak.</p> <p>Much of the fire continues to show high concentrations of scattered heat, and isolated heat sources were found throughout the fire area.</p> <p>The reported spot fire in Div F near DP 30 was not visible in tonight's imagery.</p>
