Comments /notes on tonight's mission and this interpretation:

Perimeters based on IR perimeter from 10/02/2019.

Middle: Just one isolated heat source detected tonight inside the perimeter. It was in the same place as the isolated heat detected with the flight two nights ago. No perimeter growth detected. A map is included, shapefile made for the unchanged perimeter and one for the isolated heat source. A kmz file was also created.

Jakes: Jakes was flown, and imagery was clear. No "fire" detections on the imagery tonight in the area of the Jakes fire. A map is included, shapefile made for the unchanged perimeter. A kmz file was also created.
