FIRE BEHAVIOR SUMMARY

Fuel moisture will be driven down over the next several days. Energy Release Component values have fallen below the 90th percentile in recent days, but are forecast to rise back above that line with hot and dry conditions in the forecast.

Most of the control lines throughout the South Zone have had no heat for the last week and pose very minimal threat. Potential for containment issues will remain focused around Lake Pillsbury, especially with hot and dry winds out of the northeast beginning Saturday afternoon/evening. This type of wind event has been known to produce large fire growth in the region.

Any fire established outside control lines could exhibit very active fire behavior, especially later in the weekend when exposed to gusty winds.

AIR OPERATIONS

Smoke produced during any significant fire activity on the North Zone could create visibility issues at times.

SAFETY

Increasing winds make hazard trees even more dangerous.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

Radio Cloning Procedures:

- At operational briefings, one representative from each module should be cloned by Communications Unit, then subsequently share the radio code plug/program with the module.
- Cloning procedure:
 1. COMT puts on gloves and face covering.
 2. COMT clones radio (COMT is only person that handles cloning cable and cloner).
 3. COMT wipes down customer radio with appropriate disinfecting solution or wipes and returns the radio.
 4. COMT wipes down cloner, cable, and gloves.
 5. Move on to the next radio.
- Module representatives, single resources, and cooperators will maintain social distancing as they line up for service.
- As practical, cloning areas should be set up outdoors in well-ventilated areas with enough space for social distancing.

Training Message

Training Watch-Out - You see your trainer driving out of camp, heading home, and you haven't gone over your Task Book.

The Training Specialist has demobed. Trainees currently on the incident will be responsible to ensure, prior to either of you demobing, that the Trainer/Evaluator makes the necessary entries in the Task Book and completes an Incident Performance Rating for them.

Don't wait until the last minute to update your task book.

Please Send Us Your Fireline Photos:

Email them to 2020.augustcomplex@firenet.gov and include the date, location, and a photo credit.

PAUSE BEFORE POSTING IMAGES

Consider agency guidelines and potential ramifications before posting pictures of:

- fireline personnel not wearing full PPE
- identifiable structures (i.e. addresses)
- burning / burned structures
- inmate crews
- faces of children
- accident or investigation scenes
- sensitive natural or cultural resources (or QR codes to maps that identify them)
- whiteboards / flipcharts with passwords or internal contacts listed

Media in California

The media in California have unlimited access to the fire area, with very few exceptions.

California Penal Code 409.5(d): Nothing shall prevent a duly authorized representative of any news service, newspaper, radio or television station or network from entering the areas closed pursuant to this section. Exceptions are crime scenes or deliberately interfering with incident operations.

Only California and New Jersey have laws which allow unlimited access to emergency areas to legitimate press. Journalists do not have a general right to access private property. Consent is between the journalists and persons having control of the property; not the public safety agency.

The California Penal Code allows media access to scenes of disaster, riot, or civil disturbance, but not to crime scenes. Media access cannot be prevented for safety reasons unless their presence would impede firefighting operations. If entering a location is hazardous, they should be advised of the situation.

Contact your incident Public Information Officer at (530) 487-4602 with any questions.

Human Resource Message

C o m m u n i c a t i o n

Communication is a two way street. When communication becomes a one way, it becomes a traffic jam and turns into an issue.

Some examples are:

- ❖ **Someone irritating you and getting on your nerves, but you don't say anything until it boils over and causes a crash.**
- ❖ **A misunderstanding of what someone was trying to communicate to you, but you didn't take the time to clarify what was said and just stewed about it.**
- ❖ **It can be like the telephone game. It starts with specific information and by the time it gets to the end it very different than what was first communicated.**

Whatever it is, clear the communication lines in a respectful manner and make it a smooth safe flowing two way street!

“The single biggest problem in communication is the illusion that it has taken place”....by George Bernard Shaw

The Human Resources Specialists are here on assignment to help you and your teams manage the operational stress keeping your crews safe, positive, and productive increasing your situational awareness.

HEALTH AND SAFETY MESSAGE

SAFETY starts with *YOU*

We are ALL accountable for SAFE behaviors

For Day/Night Operations: September 25-27, 2020

INCIDENT: **August Complex**

TIME: Day-0600 Night-1900

Major Hazards and Risks:

- **DRIVING:** Drive defensively. Be aware of ALL VEHICLES on roadways and fire area. Remember, traffic and recreational visitors & hunters will be very heavy throughout the fire and non-fire areas.
- **HEAT RELATED ILLNESS (HRI):** Temps on the increase. Monitor yourself and others. Drink plenty of water/fluids, take frequent breaks, get 8 hours of sleep and get enough food to support your task of the day. Drink often! Stay Hydrated!!!! Don't get behind the hydration curve.
- **HAZARD TREES:** Look up, Look down, Look around for signs of fire weakened trees.

Fire Order of the Day:

#4: Identify escape routes and safety zones and make them known

- Utilize IRPG pg. 7 and brief all resources on LCES established for your assigned area
- While identifying safety zones take a close look at the fire behavior predictions
- LCES **MUST** be established and known to all firefighters before it is needed!

Watch Out Situation of The Day

7. NO COMMUNICATION LINK WITH CREW MEMBERS/SUPERVISOR

Watch for Over Confidence During Mop Up

Driving: As you become more familiar with the road systems we tend to increase speeds. Please be aware of this and keep speeds down, watch for people and vehicles along the roads, and drive defensively.

PPE: Please recognize that in low stress situations like mop up it is easy to over-look the importance of wearing the appropriate PPE include eye protection.

Work Area: Familiarity with your work area can result in a lowering of awareness, especially as conditions change.

DURING TRANSITION

Know who you are working for.
Review medical plan and procedures.
Review communications plan.
Review and communicate current Plans, Tactics and Strategies.

Driving Safety

Vehicles/Roads Category

Driving is one of the most hazardous things we do because we literally perform the task hundreds of times in the course of our daily lives – we tend to take it for granted. Based on recent accident trends, vehicle accidents are the source of more deaths and serious injuries to wildland firefighters than any other single cause.

- To be a safe driver you have to *want* to be one. Take a good hard look at your driving habits. Are you training yourself to do the right things the right way, like fastening your seat belt, checking your mirrors, and maintaining safe following distances?
- Inattentiveness is a major contributing factor in motor vehicle accidents within the wildland firefighting community. Since the average adult attention span is 15-20 minutes we must develop techniques that allow us to refocus our attention on our driving.
- Many things can lure our attention away from our driving such as fatigue, eating and drinking, reading directions and maps, writing, cell phone and radio use, conversation within the vehicle, and music.
 - ✓ Drive only when you are well-rested and alert and avoid driving during the hours of 10:00 PM and 6:00 AM. Take a 10- to 15-minute break after every 2 hours.
 - ✓ Practice situational awareness; be aware of what is happening in front, behind, and on both sides of your vehicle.
 - ✓ Never drive when taking medications that make you drowsy.
 - ✓ Delegate navigation and communication to a passenger or pull over.
 - ✓ By constantly moving your vision, checking mirrors and distant road conditions, you can avoid highway hypnosis and daydreaming.
 - ✓ Avoid eating or drinking while driving.
 - ✓ When talking with passengers, keep your eyes on the road and both hands on the steering wheel. Avoid serious or argumentative conversations.
 - ✓ Switch off driving with others if multiple people are in the vehicle.
 - ✓ Do not be in a hurry, be patient.
- Safe driving starts with a safe vehicle. Something as simple as under-inflated tires can have serious consequences. Before operating any vehicle, do a walk-around to look for potential problems, make sure the lights and blinkers work, and adjust your seat and mirrors. If it is the first time you have driven the vehicle, make yourself aware of where everything is.
