**WEATHER DISCUSSION:** Local and regional generated smoke is expected to suppress temperatures once again today as winds remain diurnally driven and light (gusts less than 10 mph) as high pressure builds back over the region. Relative humidity will begin to slowly increase tomorrow but should still drop into the teens this afternoon. Overnight recoveries will begin to improve. Temperatures will be highly dependent on smoke cover but if clearing occurs expect a temperature differential of 10 degrees or more.

**TODAY:**

**TRANSPORT WIND:** SSE 4-7 mph. **INVERSION:** Weak inversion developing.

**EXTENDED OUTLOOK: Friday through Monday:** Expect light diurnal/terrain driven winds of less than 10 mph through Saturday with slowly improving RH values. Light transport winds aloft will result in lingering smoke across the area through the end of the week as well. A low pressure trough is expected to affect northern California Monday and Tuesday bringing increased S-SW winds and a chance of precipitation to the area Tuesday. Temperatures will be in the 80s across the fire area with cooler weather early next week.

**INPUTS** 

**WEATHER SUMMARY:** \*\*\*Smokev. Dry and Cooler \*\*\*

Smoke shading will greatly diminish solar effect; resulting in slightly lower temperatures and light winds. Under an overall dry airmass, RH recoveries will be poor to fair over the entire fire area.

Max.Temperature: 75-82 degrees Min. Humidity: 11- 13% Winds(Day): Upslope 2-5 mph/Gusts to 10 mph Min. Temperature: 57-61 degrees Max. Humidity: 20-23% Winds(Night): Diminishing, Light Downslope

#### **OUTPUTS**

#### **FIRE BEHAVIOR**

UNIT: CA-SHF-00001358

#### **GENERAL:**

- Identify all areas where slope reversals are likely... Expect Rapid, Intense Up-Slope Runs!
- Fine Dead Fuel Moisture 3-6%! PIG up to 90%! REVIEW ATTACHED FUELS ADVISORY!
- Very dry large fuels (<10%-1000 hr.) will retain heat and fire until engaged or fully consumed!
- Expect drift smoke from regional fires to affect your visibility.... AND situational awareness!
- This is still the peak of local fire season!...Constantly dry air means constantly available fuels!
- Any break in the inversion will greatly accelerate fire behavior....Watch your column for clues!
- Fire and winds have weakened trees considerably. Carefully evaluate all paths of travel!

#### SPECIFIC:

All Divisions: Well Established, *High Intensity* ,Fuels Driven, Surface Fire... Isolated Torching, and Short Crown Runs in Steep, Aligned Topography......

Flame Lengths- 4 to 6 ft. in Grass, Up to 30 ft. in Brush...only slightly diminishing overnight!

Rate of Spread- 40 chains/hour in Grass, Up to 80 chains/hour in Brush... Diminishing Overnight

Spotting Distances- Up to .25 miles in Grass/Brush, Up to .5 miles in Timber (From Torching)

Probability of Ignition- 60% Shaded, 90% Unshaded; Down to around 30% overnight

#### **AIR OPERATIONS:** Sunrise: 0645 Sunset: 1928

Very still air. Expect poor smoke dispersion into the afternoon with only limited clearing possible from light transport winds from the south and southeast. Mixing heights will raise to 5000' by 1600, up from 800' early in the shift. Anticipate greatly reduced visibility early, especially before the peak of afternoon heating.

#### **SAFETY**

Do Not Let Limited Visibility Lull You into a False Sense of Security.

# **Fuels and Fire Behavior Advisory**

# Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack, Late spring moisture during the heart of the low-mid elevation growing season led to above normal fine fuel loading. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

#### Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

#### Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at https://gacc.nifc.gov/oncc/predictive/weather/index.htm or potential Red Flag conditions from the National Weather Service and weather at https://www.wrh.noaa.gov/fire2/cafw/.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

# SAFETY MESSAGE

Elkhorn Fire CA-SHF- 001358

Day/Night Shift

09/10-11/2020 0700-0700

#### **MAJOR HAZARDS:**

- Potential for EXTREME FIRE BEHAVIOR.
- Snags, rolling rocks and debris with steep, unstable terrain.
- Dangerous road systems. Narrow roads with poor visibility due to dust and smoke.
- Communications. Comm Plan has some variance due to location on the fire.
- Heavy Equipment Operations.
- Rattle snakes, bees, poison oak.

# Fire Order of the Day - Base all actions on current and expected behavior of the fire.

- > Aggressive risk management is our primary means of maintaining safe wildland fire operations. Consistently evaluate fireline tactics and do not hesitate to adjust tactics as environmental and human factor conditions change - Review Risk Management Process in IRPG, page 1.
- > Dehydration, Heat Stress, and Fatigue Constantly monitor firefighter's water and electrolyte intake to avoid dehydration. Dehydration and long work hours, coupled with poor air quality ad high temperatures all impact fatigue. Provide rest opportunities.

#### FIRING OPERATIONS SAFETY:

- Conduct thorough briefing for all personnel involved (inside rear cover IRPG).
- All personnel to be fully qualified for their assignments. Trainees must have qualified trainers.
- Utilize Risk Mgmt. Process (IRPG p. 1) for implementing the plan.
- Required PPE to be worn by all personnel involved.

LCES must be established prior to implementing burning operations (IRPG p. 7).

### COMMUNICATIONS RESPONSIBILITIES

All firefighters have five communication responsibilities:

- Brief others as needed.
- Debrief your actions.
- Communicate hazards to others.
- Acknowledge messages.
- **ASK** if you don't know or are unclear.

In addition, all leaders of firefighters have the responsibility to provide complete briefings that include a clearly stated "Leader's Intent."

# Suicide Prevention Week September 6-12, 2020

We are in unprecedented times in our Nation and the world. We are being told to social distance and isolate. Studies show that these factors can have a significant impact on physical and mental health. It is important to realize that while we are talking about taking care of ourselves, we need to continue to watch out for each other, this includes our mental health. Suicide is the 10<sup>th</sup> leading cause of death in the US. Each year 47,000 Americans die by suicide. A study done in 2017 showed that more firefighters died by suicide than in the line of duty. This tragic loss of life has increased every year and does not discriminate. Exposure to traumatic events has a high impact on your mental and physical health and wellbeing.

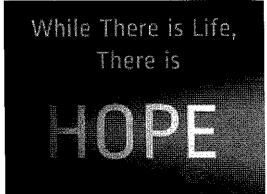

There is no single cause to suicide. No one is beyond it, so take the time today to check in with each other. There should be no shame or embarrassment in identifying and reaching out for help.
