FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 16	TYPE OF FIRE: Wildland Fire
FIRE NAME: August Complex South Zone	OPERATIONAL PERIOD: Day Shift, October 27, 2020
DATE ISSUED: October 26, 2020	TIME ISSUED: 1900

INPUTS

RED FLAG WARNING IN EFFECT UNTIL 5PM TODAY

WEATHER SUMMARY: For Specifics Please see the attached Incident Weather Forecast.

WEATHER: Critical fire weather conditions continue today with winds decreasing late in the day. Poor humidity recovery overnight on higher terrain. Sunny, very dry, and windy.

MAX TEMP: 62-82° MIN RH: 7-12%

20 FOOT WINDS: NE 10-20 mph w/ gusts up to 30 mph in the morning Decreasing to 7-14 mph w/

gusts around 20 mph in the afternoon

Chance of Wetting Rain: 0%

FUELS: The fire is burning in mixed fuels, i.e. grasses, duff, brush, and conifer at the lower elevations with mixed conifer in the upper elevations. Fuels remain extraordinarily dry for this dime of year.

Ignition Receptiveness: Probability of Ignition: nearly 100% on the driest unshaded slopes, 75-95% shaded and on

cooler slopes

<u>Dryness:</u> Dead and down fuel moistures :1 hour – 1-2%, 10 hour– 2-3%, 100 hour–7-8%, and 1000 hour– <10%.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

While no perimeter growth is expected, the recent dry airmass has increased the number of interior smokes and patches of open flame in dozer berms, candles and a thin layer of litter from scorched needles that have been recently blown off the standing trees. This smoldering fire behavior will continue in the Hell Hole Canyon area (Division S). The fuels outside of the fire perimeter will remain dry and highly receptive to fire. If fire is established outside of the perimeter expect to see very active fire behavior, including group torching, short crown runs and long-range spotting in excess of a mile.

SPECIFIC:

Division S: Smoldering and open flame within the perimeter in stumps, logs, and in aerial fuels (candles). Watch for newly available fuel from needlecast and freezing temperatures. Winds will increase through the saddle above Hellhole Canyon. Any fire moving into new fuels will exhibit very active fire behavior.

All Other Divisions: Interior smoldering increasing with winds throughout the day.

AIR OPERATIONS: No visibility issues, though high winds may restrict some aircraft.

SAFETY

How dry is it?

Aside from the usual similes about dryness...."Dry as a bone, dry as the desert dust", and the all-time favorite, "Dry as a popcorn fart", try these on for size:

" Dry as the shell on the sand."

—Oliver Wendell Holmes

"Dry as the leaves in winter."

-Walter Savage Landor

"Dry as fossil truths."

—Henry D. Thoreau

How to Avoid a Fuel Geyser

Felling Safety Category

Follow these instructions when a Stihl saw is running poorly and "vapor lock" is suspected.

DO NOT remove the cap it won't fix the problem!

The following restart process should be started immediately.

Saws are air cooled and continue to build heat when not running.

- 1. Check Fuel Level via the Transparent Tank
 If tank is over 1/2 full DO NOT remove the cap.
- 2. Close Choke

Pull starter rope until saw fires, or up to 20 times maximum.

Once Saw FiresPlace choke lever in starting position.

Pressure

- 4. Pull Starter Rope Until Saw Runs, or up to 10 Times Maximum
- If Saw Does Not Start
 Discontinue use. Let saw cool completely. DO NOT remove the cap.
- 6. Once Saw is Cool, Start this Process Over.

	Key Points	
A "hot" saw with a tank half or more full could geyser. Check fuel level before removing cap.	Newer Stihl saws (MS460/461) w/¼ turn fuel caps are more prone to geyser.	Always assume fuel tanks and fuel containers are pressurized.
Move away >20' from open flame before opening cap.	Open cap slowly and cover to contain potential spray.	Saws take a considerable amount of time to cool to a safe level.

For more information or to report a fuel geyser go to the Fuel Geyser Awareness website.
