

INCIDENT ACTION PLAN

AUGUST COMPLEX

SOUTH ZONE

CA-MNF-000753 P5NFP4 (0508)

The Incident Command System (ICS) relies on interagency communications between firefighting resources for collaborative fire suppression. This Standard Firefighting Order shows a variety of firefighting resources working together to effectively suppress a wildland fire.

Known radio frequencies and channels enable instant communication within and between firefighting resources. This Watch Out shows a crew physically separated without any obvious method for communication among crew members or their supervisor.

MONDAY, NOVEMBER 2, 2020
DAY OPERATIONAL PERIOD 0700-1900

COVID-19 MITIGATION ACTIONS AND LEADER'S INTENT

- Assigned resources will practice social distancing (to the extent possible) and be in alignment with the "module of one" concept. When interacting outside the "module of one" face-coverings are required; this includes ICP, established businesses and fireline interactions outside of the "module of one".
- Frequent handwashing is encouraged.
- Please utilize the virtual check-in and demob procedures to reduce potential exposures.
- All personnel entering the ICP will be temperature screened by Incident Medical Staff.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 22	TYPE OF FIRE: Wildland Fire
FIRE NAME: August Complex South Zone	OPERATIONAL PERIOD: Day Shift, November 2, 2020
DATE ISSUED: November 1, 2020	TIME ISSUED: 1900
UNIT: Mendocino National Forest	SIGNED: Mike Beasley, FBAN 

INPUTS

WEATHER SUMMARY: For Specifics Please see the attached Incident Weather Forecast.

WEATHER: Little change from yesterday. Sunny, very dry.

MAX TEMP: 69-85° **MIN RH:** 9-15%

20 FOOT WINDS: Ridges: Southwest 4-8 mph w/ gusts around 12 mph;

Slope/Valley: Upslope/upvalley 3-9 mph

Chance of Wetting Rain: 0%

FUELS: The fire is burning in mixed fuels, i.e. grasses, duff, brush, and conifer at the lower elevations with mixed conifer in the upper elevations. Fuels remain extraordinarily dry for this time of year.

Ignition Receptiveness: Probability of Ignition @ peak of the burn period: Below 3000': 65-88% unshaded/60-82% shaded, Above 3000': 63-86% unshaded/58-80% shaded

Dryness: Dead and down fuel moistures :1-hour 3-7%, 10-hour 5%, 100-hour 5-8%, and 1000-hour <10%.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

No perimeter growth is expected. Dry conditions will continue to encourage emergent hot spots in dozer berms, logs, standing snags, and a even a thin layer of litter from scorched needles that have been recently blown off the standing trees. This smoldering fire behavior will continue in the Hell Hole Canyon area (Division S). The fuels outside of the fire perimeter will remain dry and highly receptive to fire. Any escaped fire would likely only exhibit short-range spotting. Fine fuel moisture continues to rise with the increased shading from shortening day length.

SPECIFIC: Division S: Smoldering within the perimeter in stumps, logs, and in aerial fuels (candles). Watch for newly available fuel from needlecast. Any fire moving into new fuels will exhibit active fire behavior w/ short-range (< ¼ mile) spotting. Active fire behavior only during the 2-3 hours at the peak of the burn period. Only creeping with low flame lengths in the morning and evening hours.

All Other Divisions: Interior smoldering.

AIR OPERATIONS: No issues.

"Teamwork is the ability to work together toward a common vision. The ability to direct individual accomplishments toward organizational objectives. It is the fuel that allows common people to attain uncommon results."

— American businessman Andrew Carnegie

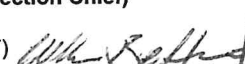

"In the depth of winter, I finally learned that within me there lay an invincible summer."

— Philosopher Albert Camus

"I shall pass this way but once; any good that I can do or any kindness I can show to any human being; let me do it now."

— Quaker missionary Etienne de Grellet

Appendix A: Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet. Waterbars should be dug as dips, not constructed from fill.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1-5	200
6-20	125
21-40	60
41-60	40
>60	25

Waterbars constructed by hand on hand line should be at least two Pulaski widths (4-6 inches) wide and 6-12 inches high.

Waterbars constructed by heavy equipment on dozer lines should be at least 12 inches wide and 12-18 inches high.

Water bar construction

- a. Space water bars based on gradient, following the chart above.
- b. Build water bars at a 30-45° relative to perpendicular to the fireline.
- c. The outlet of the water bar must be cleared and open to ensure proper drainage and prevent ponding or pooling of water. The outlet must extend beyond the edge of the fireline.
- d. Water bars should be located so they drain onto vegetative cover, slash, rocks, duff, or other less erodible material. Water bars should not drain directly into drainages or unstable areas.
- e. Excavate water bars as dips into firm soil instead of building as dikes from fill material.
- f. Wherever possible, water bars should drain onto the unburned side of the line. On ridges, alternate direction of water bars (herringbone pattern) to prevent concentrating water on one side of the fireline.
