FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 07	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex	OPERATIONAL PERIOD: 8/27/20 Day
DATE ISSUED: 8/26/20	TIME ISSUED: 2100
UNIT: Plumas NF	SIGNED: /s/ Patrick Doyle, FBAN-t

INPUTS

WEATHER SUMMARY:

Temps: Highs 73-91° RH: min. 15-25%

Winds: morning SE 0-5 mph, transitioning in the afternoon to W 5-10 mph

Ridges: afternoon W 10-15 mph afternoon (see Fire Wx Forecast, previous page) Gusts W 15 mph ridgetop afternoon.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Expect increased activity today, with forecasted hotter temperatures and much lower Rhs (**down 10-15%**). There will be lower fire activity in the morning, transitioning to increased fire activity in afternoon with lifting smoke and haze. As fire responds to increased temperatures, windspeeds, and decreased Rh. Watch areas that have heavier fuels, that are holding heat and waking up with warmer temps and lower Rhs.

Key Points:

Critically low fuel moistures (~90th percentile conditions) make all dead and down fuels available for burning, continue to lower into weekend.

Northern Sierras PSA NC07

- Low nighttime Rh recovery continues to contribute to critically low and decreasing fuel moisture in dead fuels.
- Expect afternoon winds to pick up lifting out smoke and inversion with increased fire activity and spotting.
- Torching and spotting has contributed significantly to fire spread and reduced control efforts. Watch for holdover heat near control lines.

Bl 53 (▲up +2, near 90th percentile) ERC 73 (▼down -3, near 90th percentile) 100 HR Dead Fuel Moisture: 7.4% (▲up +0.8, near 90th percentile)

1000 HR Dead Fuel Moisture: 7.7% (▲up +0.1, greater than 90th percentile)

SPECIFIC:

Branch IV / V: Sheep fire - East of Div A / M break continues to be challenging with increased activity in the afternoon, with fire wanting to spread N-NE with wind. Div D/F/H even though a lot of work has gone into securing these lines, spotting from holdover heat standing and down heavy fuels near line will be a concern. Fire spread in grass and sage-steppe in foothills and flats near Susanville and Janesville will support rapid rates of spread (up to 180+ ch/hr) with afternoon winds.

Key Points:

- Diy A / M break, watch-check white ash near control lines for holdover heat from recent activity waking up in the afternoon.
- Watch fire activity in Div D & F timber stringers for holdover heat near line for spotting in afternoon.
- Div H will continue to flank on mid-to-upper slopes in timber, actively flanking with torching and spotting.
- Spotting from individual tree torching and passive crown fire activity has contributed significantly to increased fire spread rates and reduced control efforts.

Prob. Of Ignition: 79-90% Rate of Spread (ROS): max 20-180 ch/hr, min ROS 1-10 ch/hr.

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch II: Claremont Fire - With much diminished fire activity in the Claremont fire area, be diligent in seeking out that heavier fuels are retaining heat and will awake in the afternoon. Watch out for potential spotting upslope or downwind across containment lines. Area east of main fire, towards Sloat have most active behavior in Claremont fire from Div X around and mainly in Div Z.

Key Points:

- Div Z: Fire behavior modeling (continues) project fire spread to the E, parallel with Middle Fork Feather River spreading towards Sloat.
- Expect afternoon winds to pick up, lifting out smoke and inversion, and increased fire activity and spotting from torching trees and shrubs.
- Watch for spotting from individual tree torching or heavy down fuels holding heat spring back to life with winds and solar heating in the afternoon near control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS 1-8 ch/hr.

Prob. Of Ignition: 79-90%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch X: Bear Fire - Fire has backed down to the Middle Fork of the Feather River, approximately in the middle portion of fire, between Little Bear Creek and Bear Creek. Watch for afternoon spotting to the northeast of main fire in Bear Creek. Key Point:

- Watch out for roll-out with material igniting below with uphill runs in drainage, and in afternoon spotting continues to be a significant component of fire spread (spotting distances 1/10 to 1/25 of mile). In addition, to actively backing and flanking, and uphill/updrainage spread in most

Rate of Spread (ROS): max 10-90 ch/hr, min 1-8 ch/hr.

Prob. Of Ignition: 79-90%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

AIR OPERATIONS:

Air operations window may be affected by inversion and thunderstorm development in area.

SAFETY

Mop up should be more extensive in areas that could generate wind-blown embers across the line.

Safety Message North Complex – Sheep Fire

INCIDENT: North Complex Date: 8/27/2020 Safety Officers: Doug McKelvey CC Christensen

- **Driving:** Drowsy driving is a major problem. The risk, danger, and sometimes tragic results of drowsy driving are alarming. Drowsy driving is the dangerous combination of driving and sleepiness or fatigue. This usually happens when a driver has not slept enough.
- Structure Protection: Firefighter safety first, stay mobile. Back equipment in and know the road system. Use and a spotter when backing. Refer to Page 12 in the IRPG for WUI. Check for plastic culverts. Avoid parking and working under powerlines. ID all hazardous materials. LCES, monitor fire and spread. Have a trigger point established with a known rally point.
- Slips, Trips, and Falls: Take your time while traveling on foot. It is steep and quite easy to step in the wrong place or in the wrong way and blow out a knee, sprain an ankle, or make a one-point landing on your head. Take extra precautions on steep slopes. Be aware of your location, the time it took on foot to your location, and what resources you will need if someone gets injured out on the fireline.

Create a bigger safety margin for yourself, your crew, and your adjoining resources by:

- Taking your time: No need to rush tasks, always come up with contingency plans. (IWI)
- Assess the situation: Scout the work area, look for hazards, communicate them, and mitigate using sound risk management decision processes.
- *Make Good Decisions:* Use all the info you have gathered, look for blind spots in your plan, and above all else... Keep your people informed.

<u>IWI</u>

Identify who is on your division and qualified EMT. Know who is adjoining your division and can assist with an IWI If one should happen. Make sure you,

- Have a plan in place
- Fill in box 6 in the Med Plan
- Have a contingency plan
- IRPG page 118 & 119

Fail to plan, plan to fail!

Smart firefighters are hydrated firefighters!
