OUTPUTS

FIRE BEHAVIOR

GENERAL:

Similar conditions to what we saw yesterday, except for a couple key points that impact fire behavior: wind speeds and solar radiation (sunshine). Today's forecasted higher windspeeds and gusts in the afternoon. Wind is a critical component to flare ups, spotting, and overall increased fire activity. This will increase any fires resistance to control, especially in areas already challenging. Fire weather forecast identifies that afternoon is "... likely to increase smoke, possibly becoming dense, at times". Smoke shields direct solar radiation from raising fuel temperatures, where solar radiation is a component that increases fire behavior activity, as a result dense smoke may shield or diminish activity. So, today's fire behavior will have a lot do with "it depends ...". Where your work assignment is, is key to "if" you will experience increased or decreased fire activity from wind and/or smoke.

Key Points:

- Still critically low fuel moistures (~90th percentile conditions) make all dead and down fuels available for burning, continue to lower into weekend.
- Low nighttime Rh recovery continues to contribute to critically low and decreasing fuel moisture in dead fuels.
- Expect afternoon winds to increase fire activity and spotting.
- Torching and spotting has contributed significantly to fire spread and reduced control efforts. Watch for holdover heat near control lines. Northern Sierras PSA NC07

ERC 71 (no change, below 90th percentile) BI 51 (▲up +1, below 90th percentile)

100 HR Dead Fuel Moisture: 8.0% (▼down -0.6, below 90th percentile)

1000 HR Dead Fuel Moisture: 7.0% (▼down -0.8, greater than 90th percentile)

SPECIFIC:

Branch IV & V: Sheep fire - Greatly reduced fire activity over most of Sheep fire today. Do not become complacent with diminished fire activity, if fire gets outside of containment lines expect active fire spread and behavior, especially in the afternoon. Smoldering and minimal fire activity in most areas of fire except where activity has occurred over last couple days.

Key Points:

- Div H little activity in area where spread has been consistently flanking to the east. Watch for spots in afternoon WSW winds and gusts.
- Div B and B/D break, watch for spotting in this area with recent fire activity in this area as fuels burn down or are mopped up for when afternoon winds pickup.

Expected ROS, FL, and PIGs below if fire spots or slops outside of control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS creeping to 1-10 ch/hr. Prob. Of Ignition (PIG): 81-89%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FLs creeping to <1-5 ft.

Branch II: Claremont Fire - Watch out for potential spotting upslope or downwind across containment lines in Div Z, south of Feather River and possibly Div X near Lee's Summit.

Key Points:

- Div Z: Fire behavior modeling (continues) projects fire spread to the E, parallel with Middle Fork Feather River spreading towards Sloat.
- Fire activity in Div Z continues to try spread/spot across line in area near and west of Harrison Flat over 23N10 road, where upslope runs from Bray Creek can impact control efforts or firing operations on the 23N10 road.
- Watch for spotting from individual tree torching or heavy down fuels holding heat spring back to life with winds and solar heating in the afternoon near control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS 1-8 ch/hr. Prob. Of Ignition (PIG): 81-89%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL creeping to <1-5 ft.

Branch X: Bear Fire - Fire activity continues to spread up Little Bear and Bear Creeks, low rate of spread yesterday. Fire has backed down to the Middle Fork of the Feather River, approximately in the middle portion of fire, between Little Bear Creek and Bear Creek. Flanking upcanyon in the top third of the slope has reached Deadman Spring Trail, in the Middle Fork of the Feather River east of Bear Creek. Key Point:

Watch out for roll-out with material igniting below with uphill runs in drainage, and in afternoon spotting continues to be a significant component of fire spread (spotting distances 1/10 to 1/25 of mile). In addition, to actively backing and flanking, and uphill/updrainage spread in most

Prob. Of Ignition (PIG): 81-89% Rate of Spread (ROS): max 10-90 ch/hr, min 1-8 ch/hr.

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

AIR OPERATIONS:

Air operations are likely to be hindered by smoke inversions and dense afternoon concentrations if present.

SAFETY

Mop up should be more extensive in areas that could generate wind-blown embers across the line.

SAFETY MESSAGE North Complex and Sheep Fire August 29, 2020

USE LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES, SAFETY ZONES WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS

Brief your crews on all components of the IAP

Well into fire season, keep a close check on your crews' fatigue level. Multiple days of smokey conditions can have a compounding effect. Sick crew member? Leave them in camp to get well and check in with medical.

Long hours of daylight tend to make people stay up late, ensure your crews are getting enough rest. Speak up if you are having trouble due to fatigue. Remember, "It's OK to not be OK".

Hazards from snags and burning green trees are second only to aviation accidents when accounting for the fatality and injury rate due to fire suppression activities.

Strengthening snag/hazard tree awareness for all firefighters. Emphasize snag/hazard tree hazards at all briefings and tailgate sessions before crews are committed. Flag known hazards and identify to all crewmembers. White Spruce is the biggest hazard, shallow root system and large size make the a Watch Out Situation.

Work rest guidelines state "Plan for and ensure that crews, overhead personnel, and support personnel are provided a minimum 2:1 work to rest ratio(for every 2 hours of work or travel, provide 1 hour of sleep and/or rest."

There are numerous deer in the area and hitting them on the roads is a common problem in this area. Drive defensively and be ready to react.

Region 5: Employee Self-Assessment Questions
June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

- 1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of looking."
- 2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
- 3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider <u>or</u> until 14 days after date of exposure. If you develop symptoms, see #1.
- 4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
