**3. Objective(s):**

**Leaders Intent:** Suppress the North Complex and Sheep fires using a full range of management tactics & strategies that minimize exposure to firefighters, communities, and reduce the susceptibility to COVID19.

**Management Objectives:**

- Ensure safety of emergency responders & public utilizing strategies & risk management processes.
- Protect natural and cultural resources, commercial timber, and critical infrastructure while utilizing resource & agency advisors.
- Foster and maintain good relationships with local cooperators, stakeholders, and public while providing coordinated, accurate and timely information.
- Effectively manage cost by implementing strategies and tactics that have a high probability of success.

**Control Objectives:**

- Suppress all new fires in the complex on the Mt. Hough RD
- Keep all fires within existing perimeters

**Sheep Fire - keep the fire:**

- West of Richmond & Highway 395
- North of Fruit Growers Blvd
- East of Road 29N46
- South of Hwy 36

**Claremont Fire – keep the fire:**

- South and West of Pine Creek Valley
- East of the Minerva Trail and 1999 Pidgeon Fire burn scar
- North of Cleghorn Bar Road and Trail

**Bear Fire - keep the fire:**

- West of the Minerva Trail and 1999 Pidgeon Fire burn scar
- North of Middle Fork Feather River
- East of Road 23N60 and Hartman Bar Trail
- South of Roads 24N28, 23N14, and 23N16

**General Situational Awareness:**

Be aware of potential outflow winds from thunderstorms which may bring new life to areas that have had minimal activity.

Steep terrain and fire weakened trees create potential for rollout.

To help protect yourself, your family and to ensure all employees return home safely, make sure to practice physical distancing and wear a face covering.

Be prepared for the increase in activity in the afternoon.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 12

TYPE OF FIRE: Wildland Fire

## INPUTS

WEATHER SUMMARY: \*\*\*\* See Fire Wx Forecast \*\*\*\* - Dry N-NW winds over next 2-days -

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Overnight wind direction has switched to a N-NW flow, this is a critical fire weather situation in this geographical area. Northwest-to-Northeast winds bring higher wind speeds and gusts, down canyon winds, and usually much lower relative humidity (Rh) and night-time fuel moisture recovery rates. Heads up for fire activity to begin sooner, with higher wind speeds and coming from NW-N that has not tested the control lines.

#### Key Points:

- Very low fuel moistures (~90<sup>th</sup> percentile conditions) and low nighttime Rh recovery continues to make most if not all dead and down fuels available for burning.
- North Winds will increase in the afternoon, causing increased fire activity and potential spotting with to low relative humidity.
- Torching and spotting has contributed significantly to fire spread and challenged control efforts. Watch for holdover heat near control lines.

ERC 74 (no change, below 90<sup>th</sup> percentile)

BI 54 (▲ up +2, below 90<sup>th</sup> percentile)

Northern Sierras PSA NC07

100 HR Dead Fuel Moisture: 8% (▼ down -1, below 90<sup>th</sup> percentile)

1000 HR Dead Fuel Moisture: 8.0% (no change, at 90<sup>th</sup> percentile)

Expected ROS, FL, and PIGs below for uncontained/controlled fires, or if fire spots or slops outside of control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS creeping to 1-10 ch/hr. Prob. Of Ignition (PIG): 81-88%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FLs creeping to <1-5 ft.

#### SPECIFIC:

Branch IV & V: Sheep Fire – Minimal fire behavior overall, low Rh's, low dead fuel moisture recovery overnight.

#### Key Points:

- Div A/B/D - watch out for spotting in afternoon from NW-N winds increasing and being gusty. Increased fire activity in dead & down fuels due to low Rh and dry winds.
- Div H - little activity except in area at near top third of Diamond Mountains near Aspen Flats. Watch for spots in afternoon WSW winds and gusts.
- Div M/F - little activity, smoldering and burning up heavy fuels in the interior.

Branch II: Claremont Fire – Watch out in Div Z, today and tomorrow. Changing wind direction, windspeeds and gusts from the NW-N winds can cause fire to spread in direction that has not been a problem and increase activity in a previously quiet section of the fire or line.

#### Key Points:

- Watch out for NW-N winds, expect increased fire activity from low Rh's and afternoon winds increasing from the NW-N.
- Div Z - Expect increased fire activity to spread/spot south of Bray Creek, across lines between La Porte Road and of west of Harrison Flat over 23N10 road. Where upslope runs from Bray Creek can impact control efforts or firing operations on the 23N10 road.
- Div S/V/X – minimal fire activity in Div S/V and greatly reduced activity in Div X.

Branch X: Bear Fire – Fire spread has reached the Willow Creek on the SW side of Bear Fire, and crossed Mt. Ararat Creek. Downcanyon winds will be increased from NW-N wind direction will increase fire activity today. Canyon winds will funnel NW-N winds into NE winds, going downcanyon.

#### Key Point:

- Div QQ/TT - NW-N winds today, tonight and tomorrow will test SW of fire at Willow Creek drainage. Potentially spotting across Willow Creek, with upslope downwind alignment to test.
- Watch out for roll-out with material igniting below with uphill runs in drainage, and in afternoon spotting continues to be a significant component of fire spread (spotting distances 1/10 to 1/25 of mile). Fire will actively back, flank, and spread uphill/updrainage in most directions.

#### AIR OPERATIONS:

Inversion lifting in the afternoon, and potentially sooner with NW-N winds lifting the smoke out of drainages.

## SAFETY

Check and make sure to have lookouts in place and clear communication, when you cannot see main fire or not in contact with anyone who can.

## SAFETY MESSAGE

August 31-September 1st

### VEHICLE CHECKS

Vehicle accidents are the number one cause of death for wildland firefighters

- Equipment checks are part of our daily routine
- Don't let compliancy creep into your process because you find nothing wrong day after day
- Don't assume new vehicles are infallible
- The environment we work in can rapidly have an adverse effect on our vehicles, especially tires and suspension parts
- Check tires for pressure and damage daily or after travel on rough roads
  - The loss of a steer tire on a high profile vehicle can easily cause a roll over or loss of control
- Check steering components (drag links, control arms) for excessive play
  - Lose components are an indicator of worn ball joints which can fail expectantly at any time

- Even though modern slack adjusters keep brakes adjusted automatically they only work if all parts are present. Make sure all pins etc. are there

- Use backers
  - It is very embarrassing to hit something with multiple people in the vehicle
- At every stop walk around vehicle to check for water bottles/radios/open compartments
- Downshift while traveling downhill on steep grades. Engines and other heavy vehicles coming down steep grades should be either using an engine brake or low gear. Grade will over heat brakes without assistance.

## Region 5: Employee Self-Assessment Questions

June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
  - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
  - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
  - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
  - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider or until 14 days after date of exposure. If you develop symptoms, see #1.
4. In the last 14 days have you traveled outside your local area?
  - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
