3. Objective(s):

Leaders Intent: Suppress the North Complex and Sheep fires using a full range of management tactics & strategies that minimize exposure to firefighters, communities, and reduce the susceptibility to COVID19.

Management Objectives:

- Ensure safety of emergency responders & public utilizing strategies & risk management processes.
- Protect natural and cultural resources, commercial timber, and critical infrastructure while utilizing resource & agency advisors.
- Foster and maintain good relationships with local cooperators, stakeholders, and public while providing coordinated, accurate and timely information.
- Effectively manage cost by implementing strategies and tactics that have a high probability of success.

Control Objectives:

- Suppress all new fires in the complex on the Mt. Hough RD
- Keep all fires within existing perimeters

Sheep Fire - keep the fire within existing perimeters

Claremont Fire – keep the fire:

- South and West of Pine Creek Valley
- East of the Minerva Trail and 1999 Pidgeon Fire burn scar
- North of Cleghorn Bar Road and Trail

Bear Fire - keep the fire:

- West of the Minerva Trail and 1999 Pidgeon Fire burn scar
- North of Middle Fork Feather River
- East of Road 23N60 and Hartman Bar Trail
- South of Roads 24N28, 23N14, and 23N16

General Situational Awareness:

Be aware of potential outflow winds from thunderstorms which may bring new life to areas that have had minimal activity.

Steep terrain and fire weakened trees create potential for rollout.

To help protect yourself, your family and to ensure all employees return home safely, make sure to practice physical distancing and wear a face covering.

Be prepared for the increase in activity in the afternoon.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

WEATHER SUMMARY: **** See Fire Wx Forecast **** - Dry N-NE winds over next day -

OUTPUTS

FIRE BEHAVIOR

GENERAL:

One more day of N-NE wind flow, this will not have the windspeeds what would be considered a North Wind "Event", which is a critical fire weather situation in this geographical area. Northwest-to-Northeast winds bring higher wind speeds and gusts, down canyon winds, and usually much lower relative humidity (Rh) and night-time fuel moisture recovery rates. Fire activity this morning through today will test lines on S to SW areas fire. WATCHOUT for spotting across control lines, drainages, and spreading out of control lines.

Key Points:

- Very low fuel moistures (~90th percentile conditions) and low nighttime Rh recovery continues to make most if not all dead and down fuels available for burning.
- North Winds will increase in the afternoon, causing increased fire activity and potential spotting with to low relative humidity.
- Torching and spotting has contributed significantly to fire spread and challenged control efforts. Watch for holdover heat near control lines.

ERC 75 (▲ up +1, below 90th percentile)

BI 52 (▼ down -2, below 90th percentile)

Northern Sierras PSA NC07

100 HR Dead Fuel Moisture: 8% (no change, below 90th percentile)

1000 HR Dead Fuel Moisture: 8.0% (no change, at 90th percentile)

Expected ROS, FL, and PIGs below for uncontained/controlled fires, or if fire spots or slopes outside of control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS creeping to 1-10 ch/hr. Prob. Of Ignition (PIG): 82-90% afternoon

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FLs creeping to <1-5 ft.

SPECIFIC:

Branch IV & V: Sheep Fire – Minimal fire behavior overall, low Rh's, low dead fuel moisture recovery overnight. Where there is fuels-- backing and smoldering fire, and concentration of fuels continue to burn logs, stump holes, snags and dozer berms. Retaining heat consuming dead and down fuels.

Key Points:

- Div A/B/D - watch out for spotting today from N to E winds increasing in afternoon and being gusty. Increased fire activity in dead & down fuels due to low Rh and dry winds.
- Div H - little activity, smoldering and burning up heavy fuels in the interior.
- Div M/F - little activity, smoldering and burning up heavy fuels in the interior.

Branch II: Claremont Fire – Heads up again today in Div Z. Expect N to NE wind direction, windspeeds and gusts from the winds can cause fire to spot or spread in direction that has not been a problem, and increase activity in a previously quiet section of the fire or line.

Key Points:

- Watch out for N-NE winds, expect increased fire activity from low Rh's and afternoon winds increasing from the N-NE.
- Div Z - Expect increased fire activity, watch out for spread/spot across dozer lines between La Porte Road (near Red Bridge) and Harrison Flat over 23N10 road. Where upslope runs from Bray Creek can impact control efforts or firing operations on the 23N10 road.
- Div S/V/X – minimal fire activity in Div S/V and greatly reduced activity in Div X.

Branch X: Bear Fire – Fire spread has reached the Willow Creek on the SW side of Bear Fire and has shown unusual level of decreased activity near lower slope. Heads up for any new activity today with downcanyon winds in alignment with N-NE winds. Downcanyon winds will be supplemented by these N-NE winds, so be heads up for increase in fire activity today. Canyon winds will funnel N-NE winds in going downcanyon, the morning winds should be stronger than afternoon due to diurnal conditions pushing back on down canyon winds.

Key Point:

- Div QQ/TT – N-NE winds today will continue test SW of portion of fire at Willow Creek drainage. Potentially spotting across Willow Creek, with upslope downcanyon alignment.
- Watch out for roll-out igniting material below and making uphill runs in drainage, and in afternoon spotting continues to be a significant component of fire spread (spotting distances 1/10 to 1/25 of mile). Fire will actively back, flank, and spread uphill/updrainage in most directions.

AIR OPERATIONS:

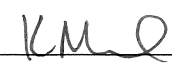

North winds should help clear out smoke and haze to enable air operations to support and provide intel to ground operations today.

SAFETY

Be alert for overhead hazards, dead and fire weakened trees coming down. Especially with increased in windspeeds and gusts!

SAFETY MESSAGE

September 1 -2, 2020

VEHICLE CHECKS

Vehicle accidents are the number one cause of death for wildland firefighters

- Equipment checks are part of our daily routine
- Don't let compliancy creep into your process because you find nothing wrong day after day
- Don't assume new vehicles are infallible
- The environment we work in can rapidly have an adverse effect on our vehicles, especially tires and suspension parts
- Check tires for pressure and damage daily or after travel on rough roads
 - The loss of a steer tire on a high profile vehicle can easily cause a roll over or loss of control
- Check steering components (drag links, control arms) for excessive play
 - Lose components are an indicator of worn ball joints which can fail expectantly at any time

-
- Even though modern slack adjusters keep brakes adjusted automatically they only work if all parts are present. Make sure all pins etc. are there

-
- Use backers
 - It is very embarrassing to hit something with multiple people in the vehicle
- At every stop walk around vehicle to check for water bottles/radios/open compartments
- Downshift while traveling downhill on steep grades. Engines and other heavy vehicles coming down steep grades should be either using an engine brake or low gear. Grade will over heat brakes without assistance.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.					
Use the following items to communicate situation to communications/dispatch.					
1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report) <i>Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."</i>					
2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure. <i>Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."</i>					
Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Maidu Requests for Visiting Homeland

1. "Be good to the land and the land will be good to you." Maidu quote

Thank you fire fighters for helping us keep our homes and cultural sites safe.

2. Enjoy your visit in the Mountain Maidu and Valley Maidu homelands.

Archeological sites and the resources they contain are not public property. A place, site or resource may have significance to a family or local tribe, which often carries with it a special level of protection.

3. Take care to avoid injuries.

Cultural sites are very old and fragile. Archeological resources are anything over 50 years old and can therefore erode easily. Also, historic dump sites can be hazardous, with sharp glass, rusty metal, and compounds and chemicals that can harm you.

4. Enjoy with care.

Oils from skin damage pictographs (rock paintings) and petroglyphs (rock carvings). It ruins irreplaceable historic resources, and it is illegal.

5. Don't touch the knickknacks.

ALWAYS LEAVE ARTIFACTS RIGHT WHERE YOU FIND THEM. Out of context, artifacts mean little to archeologists. Often the most important aspect of archeological resources is their relationship to the place and other adjacent resources. Archeological sites and artifacts are our direct link to stories that otherwise might not be told. How can these stories be complete or accurate if the setting is altered or lost? For this and other reasons, it is illegal to move or remove artifacts.

6. Feel free to discover.

Some of the sites are identified, and some sites are not recorded. If you happen to come across a cultural site we ask you to treat it like you would any cultural artifact. And note the location and report it to a Resource Advisor.

Speak with resource advisors about the potential for archaeological sites being located adjacent to roads or proposed fire lines. It's easy to destroy features and artifacts in the dark.

- Over approximately 160 years, many changes have reshaped tribal relationships with these vast landscapes as well as with each other, and yet our knowledge of and responsibilities to these incredibly rich and vast landscapes remains strong. **We appreciate your dedication to care for and building your own relationships with our natural environment while protecting these fragile and irreplaceable resources!**

Region 5: Employee Self-Assessment Questions

June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider or until 14 days after date of exposure. If you develop symptoms, see #1.
4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
