

Tonight the majority of heat perimeter growth and intense heat was detected on the west side of the South Fork Salmon River south of Yoakumville and Mile 7, southeast to the Starvout Mine which is just NW of Matthews Creek Campground. There were a few other small areas of intense heat mapped, but most of the incident showed only scattered and isolated heat.

One isolated heat source detected outside the heat perimeter at 40 57.735' N x 123 15.827' W, to the SE of the fire on the south side of the Jim Jam Ridge. One map shows the area as Jakes Hunting Ground.
