		Time From: 0600	Time To: 1800

3. Objective(s):

Management Objectives

- Provide for responder and public safety through sound risk management practices including mitigations for COVID-19 exposure.
- Implement strategies and tactics that have a high likelihood of success to limit exposures to life, property, infrastructure, natural and cultural resources by developing and executing plans that are well understood.
- Build and maintain positive relationships between assigned resources, cooperators, stakeholders, and affected communities through professional engagement.
- Keep costs commensurate with the values at risk by using thoughtful business processes.

Control Objectives

- Prioritize life safety and point protection of values at risk to reduce the exposure to life and property.
- Identify opportunities to provide perimeter containment to assist with strategic planning.
- Be prepared to support the local units with initial attack by maintaining a high state of readiness.

General Situational Awareness:

- Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees.
- In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing.

Surface winds are generally terrain driven most of the day but increase in the afternoon with a westerly component. Expect this trend to continue for the next few days...with RH levels remaining very low. Smoke will continue to be heavy across the entire area until a potential front may help to scour out the smoke on Monday followed by decent rain chances Monday night into Tuesday

Today (Friday 0600-1800):

Weather: Heavy smoke with filtered sunshine.
Max Temperatures: Below 3,000ft: 81-84; Above 4,000 feet: 71-77°.
Humidity: Below 3,000 feet: 18-23%, lowest in afternoon.
Above 3,000 feet and higher: 12-18%.

20 Foot Winds:

Lower/Mid Slopes: Upslope or west 2-4 mph until 1200, then upslope or West 5-8 mph.
Upper Slopes/Ridges: East 1-4 until 1200, then West and Southwest 4-6 mph with Gusts to 12 to 15 mph until sunset.

LAL: 1 **Haines:** 4 **Chance of Wetting Rain (0.10"):** 0%

Stability: Low valley inversions lift 1400. Mid-level inversion will hold in place through at least 1400 hrs.

Afternoon Mixing Height: Valleys: 2,000 feet AGL. Ridges: 4,000 feet AGL, if column breaks the inversion.

Smoke Transport Wind: South and Southeast 10-15 mph.

Tonight (1800-0600):

Weather: Heavy smoke.
Low Temperatures: Valley-Midslope : 60-64°; Upper slope/Ridge: 64-69°.
Max Humidity: Below 4,500 feet: 45-50%.
Above 4,500 feet: 20 to 25%.

20 Foot Winds:

Lower/Mid Slopes: West and Southwest 2-5 mph until 2100 hrs, then East or downslope 1-4 mph.
Ridges: West and Southwest 3-5 mph gusts to 10 mph until 2300 hrs, then East 3-6 mph with gusts to 10 mph.

LAL: 1 **CWR: (0.10"):** 0%

Inversion: Moderate inversion/thermal belt centered around 4,500 ft MSL.

Saturday: Mostly sunny. Max Temps: 90-94°. Minimum RH: 20-25%. Afternoon Winds - Lower Slopes: West and Northwest or upslope 5 mph gust to 10 mph. Upper slopes/Ridges: Upslope or West at 6 mph Gust to 12 mph.

Sunday and Monday Outlook: Continued smoky but an approaching weak front on Sunday may improve conditions with SW winds. Rain chances still look iffy but persist through mid-week

FIRE BEHAVIOR

GENERAL

Review the Fuels and Fire Behavior Advisory issued by the Northern California Geographic Area in the IAP

The fire is burning primarily through mixed conifer stands with a shrub understory. Other fuels types burning include moderate brush fields; and low grass-shrub fuels associated with recent fire scars. Snags from previous fires are also contributing to fire spread.

ERC values based on the Slater Butte RAWs are above the 97th percentile and approaching record values.

SPECIFIC FIRE BEHAVIOR

Mixed conifer stands: potential head rate of spread 10-20 chains per hour with flame length 6-10 feet. Expect single and group tree torching and occasional crown fire runs on steeper slopes. Spotting to 3/10 mile, probability of ignition 80-90%.

Moderate brush fields: rate of spread 20-40 chains per hour, flame length 8-10 feet,

Low grass-shrub fuels: rate of spread 15-30 chains per hour, flame length 4-6 feet.

Smoky conditions may reduce fire activity much of the day.

AIR OPERATIONS

Air operations may be impacted by smoke during most of the day.

Sunrise: Friday, 09/11 06:48

Sunset: Friday, 09/11 19:26

SAFETY

When developing strategies and tactics, safety zones and escape routes, you should be evaluating potential fire behavior (worst case scenario), not just observed fire behavior. Monitor the weather regularly for trends that may result in increased fire behavior.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

SAFETY MESSAGE

POINT PROTECTION PLANNING

- Don't enter a burning structure unless you are trained, equipped, and authorized.
- Always stay mobile and wear all of your PPE.
- Back in equipment to allow for a quick escape.
- Coil a short, 1 ½", charged line with fog nozzle on your engine for safety and quick knock down capability.
- Don't make long hose lays. Keep at least 100 gallons of water reserve in your tank.
- Ensure good access and egress. Make sure you have a safety zone at the structure, or have a plan to get to one when the fire approaches.
- Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
- Determine if residents are home. Leave inside and outside lights on regardless of the time of day, close the garage door.
- Check and mark hazmat; (ie. LPG, pesticides, and paint storage).
- Treat all powerlines as live around structures, generators my back feed the lines.

MAJOR HAZARDS AND RISKS

Structure Protection	Fire Behavior	Fatigue
Driving	Steep Terrain	Powerlines
Communications	Firing Operations	Poison Oak

Be sure all elements of your safety plan are in place prior to engagement

Mountain Driving

Watch for Rolling Material

- Driving presents one of the greatest risks faced by personnel on this incident.
- Drive defensively at appropriate speeds which allow you to react to meeting the unexpected.
- Be able to stop your vehicle within one half of the visible distance on blind curves.
- Driving demands your full attention.
- Pull off the road in a safe location when placing or receiving a cell phone call.
- Chock vehicles parked on slopes.
- Use backers whenever available.

- Post lookout(s) to warn of rolling material and ignitions below the line.
- Consider locating line in a defensible position.
- Do you have two escape routes if rolling material ignites fuel below you?
- Can you adequately trench the line based on steepness of slope and soil conditions.

Maintain Situational Awareness at all times behind the wheel.
