3. Objective(s):			
Management Objectives			
<ul style="list-style-type: none"> - Provide for responder and public safety through sound risk management practices including mitigations for COVID-19 exposure. - Implement strategies and tactics that have a high likelihood of success to limit exposures to life, property, infrastructure, natural and cultural resources by developing and executing plans that are well understood. - Build and maintain positive relationships between assigned resources, cooperators, stakeholders, and affected communities through professional engagement. - Maintain close coordination with Northern Rockies Team 2 to insure timely and efficient management of the northern and southern zones of the incident. - Prepare for the efficient transition of the South Zone portion of the Slater and Devils Fires to the Northern Rockies Incident Management Team 2 - Keep costs commensurate with the values at risk by using thoughtful business processes. 			
Control Objectives			
<ul style="list-style-type: none"> - Prioritize life safety and point protection of values at risk to reduce the exposure to life and property. - Keep the fires north of Hwy 96 to limit the potential for significant growth into the Klamath NF. - Keep the Slater Fire west of Thompson Creek - Keep the Devil Fire west of the Pacific Crest Trail and east of Fort Goff Creek - Keep the Slater Fire east of the Siskiyou Wilderness - Be prepared to support the local units with initial attack by maintaining a high state of readiness 			
General Situational Awareness:			
<ul style="list-style-type: none"> - Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees. - In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing. - Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

FIRE BEHAVIOR

GENERAL

Review the Fuels and Fire Behavior Advisory issued by the Northern California Geographic Area in the IAP

The fire is burning primarily through mixed conifer stands with a shrub understory. Other fuel types burning include moderate brush fields; and low grass-shrub fuels intermixed with areas of small to large downed logs associated with recent fire scars. Snags from previous fires are also contributing to fire spread.

Reduced fire spread has occurred on the west side of the fire (south of the State line) due to movement into areas of recent fire (last 5 years). Movement of the Devil Fire has also been impacted by a previous fire (Goff Fire 2012).

The Energy Release Component based on the Slater Butte RAWs increased Sunday to 69 which is above normal but well below the 90th percentile.

SPECIFIC FIRE BEHAVIOR

Mixed conifer stands: **Upper slopes/Ridges** potential head rate of spread 10-15 chains per hour with flame length 6-8 feet. Possible single and group tree torching. Spotting to 1/10 mile. Probability of ignition 60-70%. May remain active overnight. **Lower slopes/drainages** mostly backing/flanking fire with maximum upslope movement 5-10 chains per hour. Probability of ignition 30-50%.

Moderate brush fields: **Upper slopes/Ridges** potential rate of spread 30-40 chains per hour, flame length 6-8 feet. May remain active overnight. **Lower slopes/drainages** mostly backing/flanking fire, potential upslope movement to 30 chains per hour.

Low grass-shrub fuels: **Upper slopes/Ridges** potential rate of spread 10-20 chains per hour, flame length 3-4 feet. **Lower slopes/drainages** mostly backing/flanking fire with potential upslope movement 10-15 chains per hour.

AIR OPERATIONS

Air operations will be impacted by smoke during part of the day.

Sunrise: Monday, 09/21 06:58

Sunset: Monday, 09/21 19:09

Sunrise: Tuesday, 09/22 06:59

SAFETY

Don't fall into the "same old – same old" trap. Fire behavior can change in an instant. STAY ALERT!

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

SAFETY MESSAGE

Mission Analysis and Engagement

- What is the mission, what is the assignment?
- Are all hazards identified and made known?
- Is additional information needed?
- Lookouts – Communications – Escape Routes – Safety Zones.
- Maintain Situational Awareness.

MAJOR HAZARDS AND RISKS

Steep Terrain Driving Poison Oak	Complacency Steep Terrain Hazard Trees	Fatigue Dehydration Rolling Material
---	---	---

Be sure all elements of your safety plan are in place prior to engagement

Stay Hydrated

- Drink fluids before, during, and after the shifts.
- For every 2 bottles of water, drink 1 bottle of Gatorade.
- At 2% dehydration, performance will fall off by 10-20% and is the #1 trigger of fatigue.

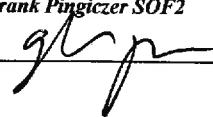

Complacency

- Don't let boredom lead to complacency.
- Remain focused on the task at hand. Stay alert at all times for changing conditions.
- It is easy to fall into a routine and lose sight of all the hazards that are around us.

CIIMT 10 Safety Officer: Frank Pingiczer, Robert Hilfer(t)
