***** Red Flag Warning for Gusty Outflow Winds & Dry Lightning In Effect Until 2300L Tuesday Morning*****

WEATHER DISCUSSION: Isolated showers and thunderstorms are expected after 0700L this morning in the wake of more significant activity overnight into early this morning. In addition to concern for new fire starts, gusty outflow winds and brief light to moderate rainfall will be possible. There's likely to be a break in the weather late morning into the early afternoon before more showers and thunderstorms develop along and near the Sierra Crest. It appears the afternoon to evening thunderstorms are most likely to remain east of the North Complex, but it will be close enough that outflow winds could affect the North Complex and isolated thunderstorms will remain possible.

Today (0700-1900):

Weather: Variable smoke, dense at times in the valley, likely thinning & mixing out from 1200 to 1500L.
Mostly Cloudy with isolated showers and thunderstorms. Gusty outflow winds possible.

High Temperatures: 67-77° Upper Slopes & Ridges, 77-87° Low-Mid Slopes & Valleys. (*Trend: Down 3*)
Afternoon Humidity: 16-24%. (*Trend: Up 4%*)

20 Foot Winds: * **GUSTY AND ERRATIC WINDS EXPECTED IN/NEAR THUNDERSTORMS** *

Lower/Mid Slopes: Light & variable into the afternoon, then WSW 5-10 mph.
Upper Slopes & Ridges: SW 5-10 mph increasing to 15-20 mph in the afternoon.
(*Wind Trend: Similar to Sunday's winds, but outflow wind gusts 30-50 mph possible*)

LAL: 2. **Chc of Wetting Rain (> or = to 0.10"):** 10%
Stability: Inversion at 7,000ft MSL lifting 1200-1500L. **Afternoon Mixing Height:** 11,500 feet MSL.

Tonight (1900-0700):

Weather: Partly Cloudy early in the evening, then Mostly Cloudy with a chance of shower & a slight chance of thunderstorms.

Temperatures: Lows 50° valley bottoms to 65° ridges.
Overnight Humidity: Valleys: 50-70%; Ridges: 35-55%.

20 Foot Winds:
Lower Slopes: Downslope and down valley 0-5 mph.
Upper Slopes: SW 5-15 mph, strongest in the evening.

LAL: 2 **Chc of Wetting Rain (> OR = to 0.10"):** 20%
Inversion: Moderate thermal belt near 6,500ft with smoke becoming trapped below it.

Tuesday-Friday:

A slight chance of dry thunderstorms Tuesday. Little to no rainfall is expected. Gusty outflow winds will remain a concern as well as gusty SW winds in the afternoon and evening. Temperatures 3 to 5 degrees cooler for Tuesday and Wednesday, then heating back up Thursday & Friday. Gusty S to SW winds each afternoon and evening.

Observations from Sunday:

Feather River College (3425ft) near ICP- Temps: 49F/90F, RH: 88%, 15%. Max wind: W 7 mph.
Buck Lake Road West (3793ft) NE of Bear Fire- Temps: 46F/91F, RH: 91%, 11%, Max wind: SW 19mph.
Pierce (5811ft) SW of Sheep Fire: Temps: 63F/84F, RH: 38%, 14%, Max wind: W 25 mph.

FIRE BEHAVIOR FORECAST

INPUTS

WEATHER SUMMARY: *** RED FLAG WARNING– Thunderstorms & Strong Outflow Winds (Sun-Tues) ***

Temps: Highs 77-87

RH: min. 16-24%

Winds: calm in the morning with light and variable, transitioning in the afternoon to WSW 5-10 mph

Ridges: afternoon SW 15-20 mph

*** Gusty and erratic winds expected in/near thunderstorms ***

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Potential changes to afternoon fire activity, with forecasted thunderstorm development moving through the area. Watch for low fire activity in the morning transitioning to increased fire activity as it responds to increase in windspeeds and temperature, with decreased Rh. This trend typically reverses prior to sunset, but also expect delay in decreased fire activity response. Afternoon winds heavily influence and, in some places, overrides a typical upslope primary fire growth and spread direction.

Key Points:

- Thunderstorms (T-storms) and outflow winds may bring new life to areas exhibiting little fire activity. Downburst/outflow winds can significantly increase fire activity and/or change direction of primary fire spread and spotting.
- Low nighttime Rh recovery contributing to critically low and decreasing fuel moisture in dead fuels.
- Critically low fuel moistures (~90th percentile conditions) make all dead and down fuels available for burning.
- Expect afternoon winds to pick up lifting out smoke and inversion with increased fire activity and spotting.
- Spotting from individual tree torching and passive crown fire activity has contributed significantly to increased fire spread rates and reduced control efforts.

ERC 77 (▲ up +1, at 90th percentile)

BI 53 (▼ down -5, near 90th percentile)

Northern Sierras PSA NC07

100 HR Dead Fuel Moisture: 6.7% (▼ down -0.1, greater than 90th percentile)

1000 HR Dead Fuel Moisture: 7.6% (▼ down -0.1, greater than 90th percentile)

SPECIFIC:

Branch I: Sheep fire – North-half of fire has continued to be active in two fronts over the last couple days as it pushes toward Susanville from the timbered-elevations near the Diamond Mountains into the grass-sage flats in the foothills. Control efforts where the vegetation changes (timber to grass-scrub) has improved fire suppression efforts.

Key Points:

- Primary growth will continue spreading north in Div D, and east along the northside of the Diamond Mountain Range in Div H.
- Expect afternoon winds to pick up, lifting out smoke and inversion, and increased fire activity and spotting.
- Spotting from individual tree torching and passive crown fire activity has contributed significantly to increased fire spread rates and reduced control efforts.

Rate of Spread (ROS): max 20-90 ch/hr, min ROS 1-10 ch/hr.

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch II: Claremont Fire – Area north of highway 70 and NE of main fire will continue to challenge resources with active fire behavior and spotting in the afternoon. Watch out for T-storm or pyrocumulus development in area. Potentially strong outflow winds will increase fire activity and push fire around, and possibly outside of existing containment lines.

Key Points:

- Primary growth will continue in Div X spreading NNE, north of hwy 70, and in northeast section of Div Z spreading NE.
- Expect afternoon winds to pick up, lifting out smoke and inversion, and increased fire activity and spotting.
- Spotting from individual tree torching and passive crown fire activity has contributed significantly to increased fire spread rates and reduced control efforts.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS 1-8 ch/hr.

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch II: Bear Fire – Fire continues to be active in the Bear Creek drainage. Where the fire is on Bear Creek near the Middle Fork of the Feather River, continues to pose a significant fire spread risk with afternoon strong up canyons winds in the Feather River.

Key Point:

- Watch out for roll-out with material igniting below with uphill runs in drainage, and afternoon fire activity increasing with spotting to north on the plateau, spreading north faster.

Rate of Spread (ROS): max 10-90 ch/hr, min 1-8 ch/hr.

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

AIR OPERATIONS:

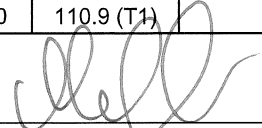

Thunderstorm activity can impede air operations where T-storm development is active.

SAFETY

Watch out for rolling burning debris crossing firelines and starting fires below you.

Date:

Operational Period:

Day/Night Shifts

SAFETY MESSAGE

**USE LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES, SAFETY ZONE
LCES IN PLACE EVERY TIME**

Major Hazards and Risks:

WEATHER and FIRE BEHAVIOR HAZARDS – Thunderstorm activity is predicted to be more intense today than yesterday. Strong outflow winds and dry lightning are possible with chances increasing through the day. Monitor the weather for changes and request updates from IMET as needed.

SNAGS - There are numerous snags as well as fire damaged trees and trees with widow-makers on La Porte road, Div A throughout the incident. Always maintain strong situational awareness for snag issues in your work area. Look up, look down, and around. Be especially alert if the wind picks up due to frontal winds before rain. When falling operations are in progress, keep non-essential personnel at least 2 ½ times tree height away from the activity.

HEALTH and WELLNESS: Fatigue is setting and has real effects on performance and decision making. This is a long-haul event/season and we need to pace ourselves accordingly. Eat well, maintain hydration, take breaks throughout the day and

CAMP SAFETY- Make sure you're in a designated Sleeping Area, no sleeping around vehicles.

No Parking in sleeping areas either.

During a storm, use the following guidelines:

- Do not lie down.
 - The best position is sitting on the pack or crouching with feet close together.
 - Avoid sitting directly on the ground, if possible; but, if necessary, keep feet and butt close together.
 - Avoid grouping together. Keep a minimum of 15 feet between people when possible.
 - Removing calk boots will not provide safety if stocking covered or bare feet are then in contact with the ground – don't bother!
- Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios, or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head “stand up,” there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.					
Use the following items to communicate situation to communications/dispatch.					
1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report) <i>Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."</i>					
2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure. <i>Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."</i>					
Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>

Function	Channel Name/Number	Receive (RX)	Tone/NAC *	Transmit (TX)	Tone/NAC *
COMMAND					
AIR-TO-GRND					
TACTICAL					
7. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.					
8. ADDITIONAL INFORMATION: Updates/Changes, et c.					
REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training. Be Alert. Keep Calm. Think Clearly. Act Decisively.					

Region 5: Employee Self-Assessment Questions

June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider or until 14 days after date of exposure. If you develop symptoms, see #1.
4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
