INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: NORTH COMPLEX	2. Operational Period:	Date From: 8/28/2020	Date To: 8/29/2020
		Time From: 0700	Time To: 0700

3. Objective(s):

Leaders Intent: Suppress the North Complex and Sheep fires using a full range of management tactics & strategies that minimize exposure to firefighters, communities, and reduce the susceptibility to COVID19.

Management Objectives:

- Ensure safety of emergency responders & public utilizing strategies & risk management processes.
- Protect natural and cultural resources, commercial timber, and critical infrastructure while utilizing resource and agency advisors.
- Foster and maintain good relationships with local cooperators, stakeholders, and public while providing coordinated, accurate and timely information.
- Effectively manage cost by implementing strategies and tactics that have a high probability of success.

Control Objectives:

- Suppress all new fires in the complex on the Mt. Hough RD
- Keep all fires within existing perimeters

Sheep Fire - keep the fire:

- West of Richmond & Highway 395
- North of Fruit Growers Blvd
- East of Road 29N46
- South of Hwy 36

Claremont Fire – keep the fire:

- South and West of Pine Creek Valley
- East of Road 24N21
- North of Cleghorn Bar Road and Trail

Bear Fire - keep the fire:

- West of the 8M07 trail
- North of Middle Fork Feather River
- East of Road 23N60 and Hartman Bar Trail
- South of Roads 24N28, 23N14, and 23N16

General Situational Awareness:

Be aware of potential outflow winds from thunderstorms which may bring new life to areas that have had minimal activity.

Steep terrain and fire weakened trees create potential for rollout.

To help protect yourself, your family and to ensure all employees return home safely, make sure to practice physical distancing and wear a face covering.

Be prepared for the increase in activity in the afternoon.

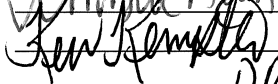

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

2-5 Day Outlook, Saturday-Tuesday:

Sunny, warm, and dry Saturday. Trending cooler Saturday night through Monday with a cold frontal passage sometime Sunday. North winds 10 to 15 mph with gusts to 25 mph will be possible especially on the north and east side of the fire. Timing and strength of the front are uncertain at this time. Otherwise, mostly clear with cool mornings with moderate to poor RH recoveries on the upper slopes and ridges. Max Temps 75-95° with Minimum RHs 13-28%. 8-17% Sat-Mon. Lows 41-68°. Max RHs: 25%-95%. FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 08	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex	OPERATIONAL PERIOD: 8/28/20 Day
DATE ISSUED: 8/27/20	TIME ISSUED: 2100
UNIT: Plumas NF	SIGNED: /s/ Patrick Doyle, FBAN-t

INPUTS

WEATHER SUMMARY:

Temps: Highs 78-95°

RH: min. 14-30%

Winds: morning topography-driven 0-5 mph, transitioning in the afternoon to W 5-10 mph

Ridges: afternoon E 10-15 mph morning, then w 5 mph afternoon (see Fire Wx Forecast, previous page)

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Potential thunderstorm development over the Bear and Claremont today this could produce outflow winds or erratic fire behavior any wind direction. There will be lower fire activity in the morning, transitioning to increased fire activity in afternoon with lifting smoke and haze. As fire responds to increased temperatures, lower windspeeds, and decreased Rh. Watch areas that have heavier fuels, that are holding heat and waking up with warmer temps and with lower relative humidities.

Key Points:

- Still critically low fuel moistures (~90th percentile conditions) make all dead and down fuels available for burning, continue to lower into weekend.
- Low nighttime Rh recovery continues to contribute to critically low and decreasing fuel moisture in dead fuels.
- Expect afternoon winds to pick up lifting out smoke and inversion with increased fire activity and spotting.
- Torching and spotting has contributed significantly to fire spread and reduced control efforts. Watch for holdover heat near control lines.

ERC 71 (▼ down -2, below 90th percentile)

BI 50 (▼ down -3, below 90th percentile)

Northern Sierras PSA NC07

100 HR Dead Fuel Moisture: 8.6% (▲ up +1.2, below 90th percentile)

1000 HR Dead Fuel Moisture: 7.8% (▲ up +0.1, greater than 90th percentile)

SPECIFIC:

Branch IV & V: Sheep fire – Reduced fire activity over most of Sheep fire today, as control lines restrict fires access to new fuels to consume. Low dead fuel moistures and near or greater fire danger rating indices, such as energy release component (ERC) and burning index (BI) have supported dead and down fuel consumption.

Key Points:

- Div H will continue to flank on mid-to-upper slopes in timber, creeping to actively flanking where opportunities are present.
- Div B and B/D break, where firing activities were completed yesterday are going to be an area of concern to watch for afternoon increased fire activity near line that may threaten line from spotting across the line.
- Div A/M lot of heat in this area, will need to be monitored due to alignment with winds and slope.
- Spotting has contributed significantly to increased fire spread rates and reduced control efforts.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS 1-10 ch/hr.

Prob. Of Ignition (PIG): 80-91%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch II: Claremont Fire – Watch out for potential spotting upslope or downwind across containment lines in Div Z south of Feather River and possibly Div X near Lee's Summit.

Key Points:

- Div Z: Fire behavior modeling (continues) project fire spread to the E, parallel with Middle Fork Feather River spreading towards Sloat.
- Fire activity in Div Z continues to try spread/spot across line south into Harrison Flat over 23N10 road.
- Watch for spotting from individual tree torching or heavy down fuels holding heat spring back to life with winds and solar heating in the afternoon near control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS 1-8 ch/hr.

Prob. Of Ignition: 80-91%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

Branch X: Bear Fire – Fire activity continues to spread up the Little Bear and Bear Creeks. Fire has backed down to the Middle Fork of the Feather River, approximately in the middle portion of fire, between Little Bear Creek and Bear Creek. Flanking upcanyon in the top third of the slope continues in the Middle Fork of the Feather River east of Bear Creek.

Key Point:

- Watch out for roll-out with material igniting below with uphill runs in drainage, and in afternoon spotting continues to be a significant component of fire spread (spotting distances 1/10 to 1/25 of mile). In addition, to actively backing and flanking, and uphill/updrainage spread in most directions.

Rate of Spread (ROS): max 10-90 ch/hr, min 1-8 ch/hr.

Prob. Of Ignition: 80-91%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FL <1-5 ft.

AIR OPERATIONS:

Air operations window may be affected by inversion and thunderstorm development in area.

SAFETY

Limited visibility may give you a false sense of security. Use LCES to ensure you know what the fires are doing around you.

North Complex and Sheep Fire

August 28, 2020

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONE
LCES IN PLACE EVERY TIME

Major Hazards and Risks:

- ✓ **Situational Awareness** – Conduct thorough briefings with your crew on all components of the IAP. Weather forecast should be highlighted in crew briefing today. Crews know where your EMTs and incident ambulances are, and ensure communications are in place. Make LCES personal for your piece of real estate.
- ✓ **Fire Behavior** - Watch for alignment of the wind flow in the drainages coming off Bear Fire and Clairmont Fire. This fire has gotten up and run a couple of times. With the changing weather pattern, watch for increased spotting potential.
- ✓ **Communications** - Command seems to have good coverage, but there is a delay as each repeater begins transmitting. Give a pause after pushing the PTT button to allow for all repeaters to begin transmitting. Inform communications if you locate any dead spots. Keep in constant communications with your crew, adjacent forces and appropriate overhead. Test command before engaging —use human repeaters where needed to ensure positive communications.
- ✓ **Driving Safety** – Slow down, watch for powdered out corners on the forest roads, especially in Div D, F, and H. The Roxy Peconon Rd is closed to all but fire personnel but not staffed. Dirt bikes are still testing that, drive accordingly.
- ✓ **Heavy Equipment** – Ensure all personnel are visible to dozers, maintain communications and mitigate overhead and rolling hazards. Maintain adequate separation between dozers and crews. Utilize traffic control on roads when transporting dozers to different parts of the fire. Ensure good comms with operators (their equipment can be very loud). Consider pairing up a private timber company operator with an agency or incident operator for accountability.

Region 5: Employee Self-Assessment Questions

June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
2. In the last 14 days have you had close contact with someone who may have COVID-19? This includes anyone with a positive COVID-19 test or who has COVID-19 symptoms (fever, shortness of breath, body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider or until 14 days after the last date of exposure. If you develop symptoms, see #1.
3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider or until 14 days after date of exposure. If you develop symptoms, see #1.
4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
