OUTPUTS

FIRE BEHAVIOR

GENERAL:

Similar as yesterday, very low fire behavior activity transitioning to moderate in the morning, picking up in the afternoon when forecasted wind increases **Key Points**:

- Critically low fuel moistures (~90th percentile conditions) and low nighttime Rh recovery continues to make most if not all dead and down fuels available for burning.
- Expect afternoon winds to increase fire activity and spotting.
- Torching and spotting has contributed significantly to fire spread and reduced control efforts. Watch for holdover heat near control lines.

ERC 74 (▲up +3, below 90th percentile)

BI 52 (▲up +1, below 90th percentile)

Northern Sierras PSA NC07

100 HR Dead Fuel Moisture: 9% (▲up +1, below 90th percentile)

1000 HR Dead Fuel Moisture: 8.0% (▲up +1, at 90th percentile)

Expected ROS, FL, and PIGs below if fire spots or slops outside of control lines.

Rate of Spread (ROS): max 10-90 ch/hr, min ROS creeping to 1-10 ch/hr. Prob. Of Ignition (PIG): 81-89%

Flame Lengths (FL): areas in alignment expect FL 5-10+ ft., where fuels and topography are not in alignment expect FLs creeping to <1-5 ft.

SPECIFIC:

Branch IV & V: Sheep fire — Greatly reduced fire activity over most of Sheep fire today. Monitor green areas near lines for spots where increased wind and fire activity may have escaped containment lines. Smoldering and minimal fire activity in most areas of fire except where activity has occurred over last couple days.

Key Points:

- Div A/B/D- watch for spotting in this area with recent fire activity in this area as fuels burn down or are mopped up for when afternoon winds pickup.
- Div H little activity except in area at near top third of Diamond Mountains near Aspen Flats. Watch for spots in afternoon WSW winds and gusts.
- Div M/F little activity, smoldering and burning up heavy's fuels interior.

Branch II: Claremont Fire – Upslope and downwind fire spread, and spotting will continue to challenge containment lines in Div Z, south of Feather River and potentially again near Lee's Summit in Div X.

Key Points:

- Div Z: Fire behavior modeling (continues) projects fire spread to the east, parallel with Middle Fork Feather River spreading towards Sloat.
- Expect fire activity in **Div Z** continue to try spreading/spotting south of Bray Creek, across lines between La Porte Road and of west of Harrison Flat over 23N10 road. Where upslope runs from Bray Creek can impact control efforts or firing operations on the 23N10 road.
- Watch for spotting from individual tree torching or heavy down fuels holding heat spring back to life with winds and solar heating in the afternoon near control lines.

Branch X: Bear Fire – Fire spread has reached the Willow Creek on the SW side of Bear Fire, and crossed Mt. Ararat Creek. Fire has backed down to the Middle Fork of the Feather River, approximately in the middle portion of fire, between Little Bear Creek and Bear Creek. Flanking upcanyon in the top third of the slope has reached Deadman Spring Trail, in the Middle Fork of the Feather River east of Bear Creek.

Key Point:

Watch out for roll-out with material igniting below with uphill runs in drainage, and in afternoon spotting continues to be a significant component of
fire spread (spotting distances 1/10 to 1/25 of mile). In addition, to actively backing and flanking, and uphill/updrainage spread in most directions.

AIR OPERATIONS:

Air operations are likely to be hindered by smoke inversions and dense afternoon concentrations if present.

SAFETY

Rolling material can ignite fires below crews.

North Complex and Sheep Fire August 30-31

Firefighter Fatigue

As fire activity increases, it becomes more and more essential that personnel assigned to duty for extended periods of time pay close attention to their level of fatigue. Fatigue is often underestimated by individuals. In fact, numerous studies have identified that significant impacts of fatigue on the human body are often not realized until something negative occurs. A few key points to keep in mind:

- 1. Repeated loss or lack of sleep results in a phenomenon knows as "sleep debt."
- 2. The "quality" of sleep is just as essential as the quantity of sleep.
- 3. Adequate work/rest cycles should be followed to prevent negative effects of fatigue.

Fatigue can manifest itself in a variety of forms. It is extremely important that individuals, crews, Team members, support staff, etc, all become aware of the signs and symptoms of fatigue and recognize when intervention is necessary. Supervisors must be informed of potentially dangerous conditions. The effects of fatigue can directly impact our abilities to:

- 1. Perform various tasks
- 2. Maintain situational awareness and a high degree of alertness
- 3. React appropriately in a timely manner and fashion
- 4. Retain a sharp memory and recollection of information
- 5. Efficiently process information and make sound decisions
- 6. Maintain a positive and supportive attitude
- 7. Control levels of frustration, irritation and aggression

Critical operations do not always lend themselves to afford adequate rest. Incident Commanders, supervisors and individuals must learn to recognize the signs and symptoms of fatigue and report when the presence of such does not provide for safe operations. Operational objectives, strategy and tactics might require modification in order to provide the safest environment for weary resources.

Individuals must be proactive in pursuing adequate rest for themselves and avoiding the traps of fatigue. Take advantage of the work/rest cycles provided and get "quality" rest and sleep. Practice good hygiene and eating habits. Remain hydrated by drinking plenty of fluids before, during and after work shifts. Avoid caffeinated drinks such as coffee, soda and "energy" drinks, which often have the opposite effects of hydration. Report any unsafe levels of fatigue, injuries or illnesses to your immediate supervisor.

INCIDENT SAFETY ANALYSIS 215a

North Complex and Sheep Fire - Sunday, August 30, 2020

8. Location	9. Hazard	6. Control or Abatement Action (Engineering, Administrative, PPE, Avoidance, Education, etc)
All	Air Operations	 Ensure positive communication with all air resources. Don't plan on air resources for medical transport or resupply. Follow "Aviation Watch-Out Situations" IRPG Pg 46. Refer to "Directing Bucket or Retardant Drops" IRPG Pg 58. Refer to "Aerial Retardant Safety" IRPG Pg57. Refer to "Aircraft Mishap Response Procedure" IRPG Pg 62.
All	Hazard Trees	 Follow "Hazard Tree Safety" guidelines, IRPG page 22. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights.
All	Extreme Fire Behavior	 Share weather observations with all personnel assigned to division. Establish "Trigger Points" to withdraw. Use "Risk Management" process prior to engaging in suppression actions IRPG Pg 1. Refer to "Common Denominators of Fire Behaior Tragedy Fires" IRPG Pg 5. Refer to "Alighnments & Patterns for Dangerous Fire Behavior" IRPG Pg 73
All	Injury & Medical Emergency	∼ Assist injured employee appropriate medical care. ∼ Use EMT's on Division for initial care. ∼ Follow "Emergency Medical Care" IRPG Pgs 105-118 ∼ Follow procedures in Medical Plan, ICS 206 ∼ Refer to "Planning for Medical Emergencies" IRPG Pg 2
Br X	Indirect Fireline	∼ Post lookouts, identify escape routes and safety zones IRPG Pg. 7 ∼ Review "Strategy Direct/Indirect Attack" IRPG Pg. 82-83 ∼ Refer to "Line Location" IRPG Pg 84
All	Driving & Traffic	~ Practice "Defensive Driving" techniques traveling on all roads and city streets.
All	Fatigue & Over Exertion	 Drink 1 quart of water each hour during and after work. Rotate crews out of smoky areas. Set a reasonable work pace and allow adequate rest breaks while on the project. Stagger work crews start time to limit fatigue. Use buddy system to monitor personnel of heat related and fatigue issues. Follow work / rest guidelines.
Br II & X	Steep Terrain & Rolling Debris	 Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access. Post lookouts IRPG Pg 7

INCIDENT SAFETY ANALYSIS 215a

All	Heavy Equipment Operations	 Refer to "Working with Heavy Equipment" IRPG Pg 86 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment.
All	Chain Saw Operations	 Follow "Hazard Tree Safety" guidelines, IRPG Pg 22 Follow "Procedural Felling Operations" IRPG Pg 85. Look up, Look down, Look around for hazard tree indicators. Only fell and buck trees within your expertise, and training. Do not fall trees during high wind events. Ensure proper use of all required PPE.
BR II & X	Firing Operations & Devices	 Only personnel trained in the use of each device will be authorized to use firing equipment. Ensure all personnel are aware of firing operation that may affect them. Wear appropriate PPE. Ensure aerial/ground ignition plans have been adequately developed and personnel are briefed.
All	Communications	 Maintain communication with aviation resources, and suppression organization. Ensure all know frequency and protocol for contacting resources. Utilize the ICS 205. Utilize human repeaters when working in dead spots.
Br II	Night Operations	∼ Maintain high visibility in work area and wear vest while in roadway. ∼ Use glow sticks to mark hazards. ∼ Ensure personnel have a personal light (headlamp). ∼ Watch for signs of fatigue. ∼ Take breaks away from areas of known hazard.
Br X	ATV/UTV use	~ Ensure equipment is inspected and safe to use. ~ Restrict UTV's to max width of 50" on ATV trails due to width and severe out sloped conditions. ~ Ensure operator is trained and certified to operate. ~ Ensure operator has proper PPE according to the Redbook and/or RMA. ~ Question if it is mission critical.
Br II & Sheep	Mop-up & Rehab	∼ Do not work above or below personnel during rehab/mop-up operations. ∼ Alert crew personnel of rolling debris by yelling to affected individuals. ∼ Position debris that could roll vertically on slope. ∼ Wear eye protection.
All	Wildlife & Livestock	∼ Watch out for wildlife & livestock inside fire area and along roadways. ∼ Clean up all debris and trash during each operational period.
All	Mines	∼ Identify and avoid mining areas. ∼ Notify others of hazard.

Region 5: Employee Self-Assessment Questions
June 11, 2020

Have all employees apply this self-assessment prior to entering any work location every day. This self-assessment includes four questions:

- 1. In the last 14 days have you had a fever, shortness of breath, body-aches or coughing (not attributable to something else, e.g. allergies) or been diagnosed with COVID-19 (presumptive or positive test)?
 - If so, do not return to work until cleared by a medical professional or you meet CDC guidance on "Discontinuation of Isolation."
- In the last 14 days have you had close contact with someone who
 may have COVID-19? This includes anyone with a positive COVID-19
 test or who has COVID-19 symptoms (fever, shortness of breath,
 body-aches or coughing (not attributable to allergies)).
 - If so, you cannot report to the workplace until cleared by a medical provider <u>or</u> until 14 days after the last date of exposure. If you develop symptoms, see #1.
- 3. In the last 14 days have you assisted in the care of an individual (outside your household) who is not well?
 - If so and you were wearing proper PPE (including a N95 mask), work with your supervisor to determine whether you should report to the workplace.
 - If so and you were not wearing proper PPE, you cannot report to the workplace until cleared by a medical provider <u>or</u> until 14 days after date of exposure. If you develop symptoms, see #1.
- 4. In the last 14 days have you traveled outside your local area?
 - If so, you should notify your supervisor and monitor yourself for symptoms for 14 days. If mitigations were not possible during travel, work with your supervisory chain to determine if self-quarantine is needed. If you develop symptoms, see #1.
