OUTPUTS

GENERAL FIRE BEHAVIOR:

Winds will increase today into the evening hours. Approaching winds will be accompanied by increased relative humidity but rain may not enter the fire area until after the strongest winds. Fire will respond to increased wind in pockets of unburned fuel. While spotting potential remains low, torching or roll-out could result in fire outside of containment lines. Medium to heavy fuels will be slow to respond to increased moisture and will exhibit moderate rates of spread in exposed locations.

SPECIFIC:

Branch II:

DIV OO (River South) – The north aspect of OO will be sheltered from the strongest winds but up canyon winds wind influence the division. Rock and tree roll out remain a threat. Upper reaches of the division will see the strongest winds. Lines in the Grizzly forebay area will see wind blowing across the line into the green.

DIV OO (River North) – Winds will be strongest on exposed locations above the river. Terrain and slope alignment would enhance fire established in the 2008 BTU Lightning Complex fire footprint above Rock Creek. Fine fuel is dry and abundant (See **Fuels and Fire Behavior Advisory**) but would become less available as the day moves on. Transition to flatter terrain and cooler conditions near The Big Hill and North Valley should reduce fire intensity.

DIV QQ – Forecast wind could push fire into pockets of heavy fuels and create isolated torching and short-range spotting. Conditions will becoming winder through the day but humidity will also increase. Exposed locations on ridges and south slopes could see increased fire behavior.

DIV MM – Winds will favorable along the main fire line. Winds could spread embers from interior torching to the east of the large spot. Spread upriver, flanking the main lines is possible, and could create control issues near Elephant rock.

Branch V – Interior smoke may increase as fuel reaches its moisture of extinction. Large fuels and pockets of light unburned fuel remain inside containment lines. Follow mop-up guidelines while accessing mop-up operations.

AIR OPERATIONS:

Wind should not be a limiting factor during day time operation period

SAFETY

Use caution working around fire weakened trees. Wind can cause branch and tops to break loose. - **Fuels and Fire Behavior Advisory for Northern California** https://www.predictiveservices.nifc.gov/fuels_fire-danger/Fuels_Fire_Behavior_Advisory_N-CA.pdf

North Complex– Safety Message

INCIDENT #CA-PNF-001308

DATE: 10-10/11-2020 TIME: 0600-0600 Day/Night Shift

RISK MANAGEMENT

Use the following process to quickly assess risk for the situations you face throughout the day.

Step 1 - Identify the hazards. Make this an ongoing, continuous process in your daily decision making routine. Gather as much information as possible.

Step 2 - Assess the risk levels. The probability and severity of an undesirable outcome linked to identified hazards = **RISK**.

Step 3 - Analyze and select control or mitigation measures. **Limiting exposure is almost always an option.**

Step 4 - Reassess risk level with controls in place (residual risk).

Step 5 - Make your informed decision based on the residual risk. Ask the **risk vs. gain** question: is the benefit of the action I am considering worth the risk?

Step 6 - Monitor the situation

HAZARD TREES

During a wind event, fire weakened trees can be more hazardous. In addition to compromised root systems and integrity, wind causes more force, exertion, and physical stress. The additional sway and rocking back and forth can lead to more trees falling than what is normally expected. Be cautious around trees. Do not park vehicles, walk under, or take a break near potential hazard trees. Saturated ground with the addition of wind can make a tree that appears stable, weak. Falling trees can damage property, hinder egress, and ingress, or **KILL YOU!**

Common Denominators

There are five major common denominators of fire behavior on fatal and near-fatal fires. Such fires often occur:

- On relatively small fires or deceptively quiet areas of large fires.
- In relatively light fuels, such as grass, herbs, and light brush.
- When there is an unexpected shift in wind direction or in wind speed.
- When fire responds to topographic conditions and runs uphill.
- Critical burn period between 1400 and 1700.

Back to the Basics

- Size-Up; when does it start and when does it end?
- You can size up the weather, fuels, topography and the condition of crews enroute to a fire.
- Once on the incident, size-up should be occurring constantly to keep up situational awareness.
- Size-up does not end at demob. It ends when you are back at home, after your gear is repacked and reset for the next assignment.

INCIDENT RISK ANALYSIS - NORTH COMPLEX CA-PNF-001308 (ICS 215a) Day/Night Shift

DIV/BR	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES	
ALL	TRAFFIC HAZARDS & DRIVING	<ul style="list-style-type: none"> • Many roads are narrow, mid-slope, with soft shoulders. Allow vehicles to pass on uphill side. Use spotters when backing or turning around. • Practice "Defensive Driving" techniques. Assume other drivers are fatigued and complacent. • Use warning lights when working on roads or traveling in smoke. • Drive at or below posted speed limits. • Use chock blocks, turn wheels into hill. • Be alert for wildlife. Dusk to Dawn pose the greatest potential for accidents. 	
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22.) • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled. • Be alert around hazard trees during wind events, even green trees. • The hazard zone extends a minimum of 2½ tree lengths. • Avoid parking vehicles or taking breaks under or near hazard trees. 	
ALL	ACCOUNTABILITY	<ul style="list-style-type: none"> • Know where your troops are at all times. • Know the plan, brief the plan, and implement the plan. • Ensure you have communications with adjoining forces, and they know the plan. • Check in and out when traveling through Branches and Divisions. • If you see someone that looks out of place, stop, and ask what they are doing • As fire conditions escalate and your chasing spots, do not over commit. • Back off, regroup, and re-engage. 	
ALL	FATIGUE COMPLACENCY	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks, as necessary. • Maintain 2:1 work/rest ratio. • Monitor ALL resources for level of fatigue. • Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. • Take steps to maintain SA for the duration of the incident. 	
ALL	WORKING IN FLUCTUATING TEMPERATURES	<ul style="list-style-type: none"> • Minimize intake of caffeine products • Ensure that your drinking a good amount of water • Take time to properly stretch your muscles prior to asking them to perform • Start out slow and work your way up to a normal pace • Dress in layers so you can remove your clothing as the shift & you warm up 	
ALL	NIGHT OPERATIONS	<ul style="list-style-type: none"> • Have a purpose for where you drive and what you do. Do not rush into assignments. • Use caution where you park or stage, especially in steep timbered areas. • Use available time for briefings on roads, terrain, and potential rolling material, especially if the resources are new to the area. • Increase SA by trying to see the work area during daylight hours. • Use glow sticks to mark hazards, and ensure personnel have headlamps. 	
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators (Visual & Radio) • Avoid working downslope from heavy equipment. • Maintain a 50'-150' exclusion area around equipment. • In timber increase safety distance to 2 ½ times canopy height. 	
ALL	WEATHER	<ul style="list-style-type: none"> • Prepare for changes in weather conditions. • Expect winds to increase and know the effect that it will have on fire behavior. • Anticipate rain, which will create hazardous driving conditions, unstable terrain, and an increase in rollout and hazard trees coming down. • Low temperatures coupled with moisture could cause bridges to freeze 	
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Are you seeing what we have predicted? • Conduct thorough assessments before starting work. • Ensure LCES is in place. Watch for wind and slope alignment with roll out. • Plan & Communicate your exit strategy with your crew and adjacent resources • Provide additional briefing for new resources and maintain communications 	
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Conduct thorough mission assessments before starting work. • Follow the guidelines in the IHOG and other aviation guidelines and reference materials. • Ensure coordination and communication are in place and understood by all involved resources in a mission. • Ensure close coordination between Air Attack, air tankers, helicopters, and ground resources. 	
ALL	COVID-19	<ul style="list-style-type: none"> • Utilize social distancing, wear facemasks in camp. • Maintain the "module of one" concept. • Disinfect vehicles, tools, and commonly touched surfaces frequently. • Do not share equipment and wash hands frequently 	
<p align="center">INCIDENT NAME NORTH COMPLEX</p>		<p align="center">OPERATIONAL PERIOD: 0600-0600 October 10/11, 2020</p>	
		<p align="center">DATE AND TIME PREPARED: October 9, 2020 1630 Hours</p>	

North Complex COVID-19 Expectations

- All incident personnel will follow all local, State and CDC guidelines for COVID-19.
- **As you travel through the local communities proximal to the fire, be mindful that in the State of California, face coverings are required inside local businesses.**
- Being a Federal fire, incident personnel are expected to comply with the following Region 5 and incident guidance.
- Use the COVID-19 Daily Screening Tool, provided in the IAP, to monitor self and module.
- Utilize Module-as-one concepts to reduce the risk of transmitting the novel Coronavirus. This limits “close contacts” to those within the module. A “close contact” is defined as less than 6 feet, for at least 15 minutes with or without face coverings/masks.
- **Social Distancing.** Maintain a minimum of 6’ physical distancing, especially from those outside of your module-as-one.
- **Face Coverings.** Face coverings are required to be worn, **in the appropriate manner covering nose and mouth**, when at ICP and camps. Outside of camps, all incident personnel will wear a face covering when social distancing is not possible, especially with those outside your module-as-one.
- **Wash your hands.** Wash your hands often with soap and water for at least 20 seconds, especially after blowing you nose, coughing or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Do not use hand sanitizers containing methanol or 1-propanol. Cover all surfaces of your hands and rub them together until they feel dry. Avoid touching your eyes, nose and mouth with unwashed hands.
- Clean and disinfect vehicles and equipment. Disinfect all high-touch surfaces frequently, such as radios, phones, door handles, etc.

There will be zero tolerance of harassment, bullying, intimidation or any resemblance of such on this incident period.

Feel free to call/text or come by the HRSP yurt if you have questions, concerns, or just want to chat. **Adam Alvarez – (HRSP) - (707) 373-8715**

Trainee Watch Out Situations

Your Red Card shows you as a trainee, you're working, but you have no idea who is training you.

You haven't looked at your task book since checking in last week.

Your task book has tasks signed off in May of 2013.

You're finally going to get that training assignment as _____, and you forgot your task book!

You see your trainer driving out of camp, heading home, and you still haven't gone over your task book.

It's Day 5 of the incident and your trainer still can't remember your name.

You are a Trainer or Trainee and you have not checked in with the Training Specialist.

Maidu Requests for Visiting Homeland

1. "Be good to the land and the land will be good to you." Maidu quote

Thank you fire fighters for helping us keep our homes and cultural sites safe.

2. Enjoy your visit in the Mountain Maidu and Valley Maidu homelands.

Archeological sites and the resources they contain are not public property. A place, site or resource may have significance to a family or local tribe, which often carries with it a special level of protection.

3. Take care to avoid injuries.

Cultural sites are very old and fragile. Archeological resources are anything over 50 years old and can therefore erode easily. Also, historic dump sites can be hazardous, with sharp glass, rusty metal, and compounds and chemicals that can harm you.

4. Enjoy with care.

Oils from skin damage pictographs (rock paintings) and petroglyphs (rock carvings). It ruins irreplaceable historic resources, and it is illegal.

5. Don't touch the knickknacks.

ALWAYS LEAVE ARTIFACTS RIGHT WHERE YOU FIND THEM. Out of context, artifacts mean little to archeologists. Often the most important aspect of archeological resources is their relationship to the place and other adjacent resources. Archeological sites and artifacts are our direct link to stories that otherwise might not be told. How can these stories be complete or accurate if the setting is altered or lost? For this and other reasons, it is illegal to move or remove artifacts.

6. Feel free to discover.

Some of the sites are identified, and some sites are not recorded. If you happen to come across a cultural site we ask you to treat it like you would any cultural artifact. And note the location and report it to a Resource Advisor.

Speak with resource advisors about the potential for archaeological sites being located adjacent to roads or proposed fire lines. It's easy to destroy features and artifacts in the dark.

- Over approximately 160 years, many changes have reshaped tribal relationships with these vast landscapes as well as with each other, and yet our knowledge of and responsibilities to these incredibly rich and vast landscapes remains strong. **We appreciate your dedication to care for and building your own relationships with our natural environment while protecting these fragile and irreplaceable resources!**

Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Protect natural and cultural resources from additional potential damage
- Repair roads and drainage structures to a functioning condition

Sensitive Sites are marked with RED and BLACK CANDY STRIPE flagging.

DO NOT repair in Sensitive Sites.

BACK-HAUL ALL TRASH AND UN-NEEDED FLAGGING. PLEASE LEAVE SAFETY FLAGGING IN PLACE.

PULL BACK SOIL BERMS All berms present from line construction should be recontoured and spread across the constructed line. Removal of berms will allow water to flow off the fire.

The three objectives of waterbars are: (1) to divert the destructive overland flow of water **off** the fire line; (2) to discharge the water onto areas where the erosive energy can be dissipated; and (3) to aid in the recovery of vegetation.

Fire line Gradient (% slope)	Distance Between Waterbars (feet)	Think 5-D System	
0-5	None	Distance	Reduce the distance water can run in a straight line
5 to 15	150 to 125	Diagonal	Don't bully the flow, lead it away
15 to 35	75 to 45	Divert	Move the water off the fireline
35 to 65	35 to 65	Discharge	Good water bar is not a dam – must have open outlet.
65+	15	Dissipate	Water should spread out from outlet like a shower not a fire hose.

DEPTH AND WIDTH: Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area, at least 18 inches and **not to exceed 24 inches**

OUTLETS: Direct water primarily to unburned areas, should not be directing water into stream channels

ANGLE: between 30 to 45 degrees

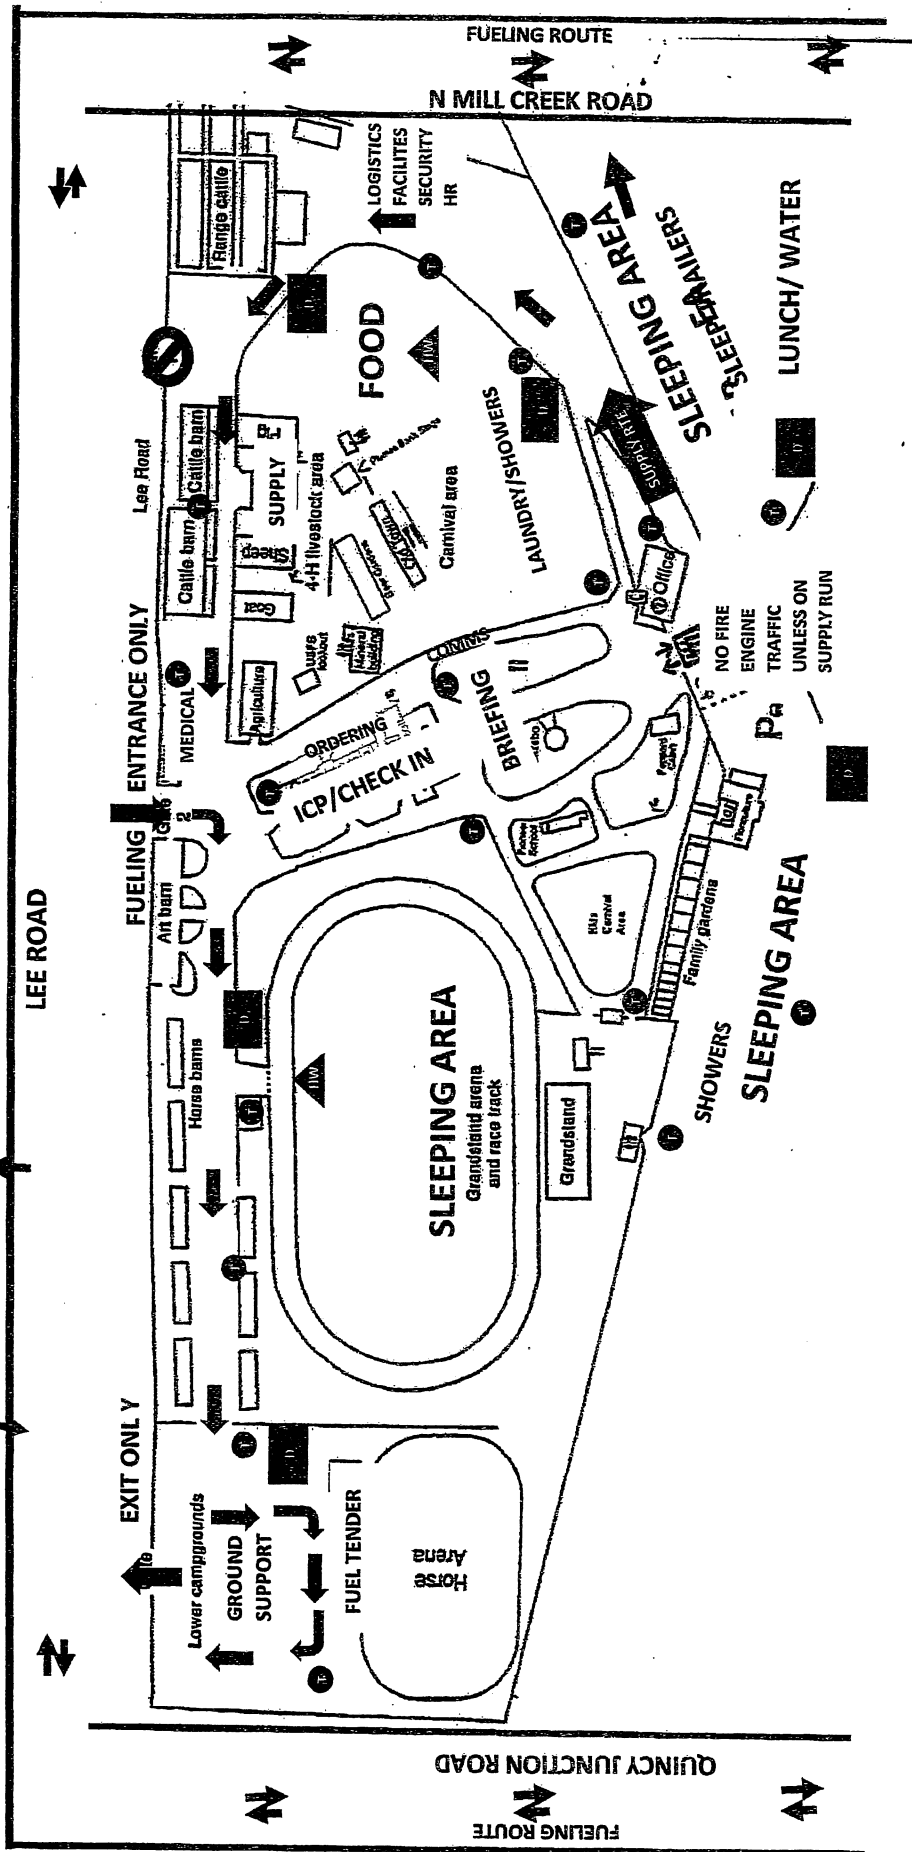

BLOCK FIRELINE ENTRANCES AND EXITS using existing materials and berms use available large rocks, large trees, or walls of brush. Use onsite material try to disguise the first 100 feet of hand line and dozer line with slash and other materials where possible as not to entice OHV users.

WATERCOURSES: Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

ROADS: Reshape soil surfaced roads. Roads should be outsloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.
