## WEATHER DISCUSSION:

**...FIRE WEATHER WATCH WEDNESDAY EVENING THROUGH FRIDAY MORNING...**

High pressure will remain in place through the end of the week. A weak upper level disturbance will pass to our north and east late this week, allowing northeasterly winds to strengthen Wednesday night through early Friday morning. The combination of extremely dry fuels, low humidity levels, poor overnight recoveries and strengthening winds will lead to critical fire weather conditions for approximately 36 to 42 hours beginning Wednesday evening. The winds are expected to ease by midday Friday.

## WEATHER FORECAST:

**WEATHER:** Sunny. Areas of smoke and haze.

## OUTLOOK FOR WEDNESDAY: ...FIRE WEATHER WATCH WEDNESDAY EVENING > FRIDAY MORNING...

Mostly sunny, breezy and warm. Patchy smoke and haze. Highs 74 to 84 (23 to 28 C). Afternoon humidity levels dropping to between 14 and 24%. Northeast winds 10-20 mph (16 to 32 kph) with gusts up to 30 mph (48 kph) with locally stronger gusts up to 40 mph (64 kph) through the North Fork of the Feather River.

## EXTENDED OUTLOOK: ...FIRE WEATHER WATCH CONTINUES THURSDAY > FRIDAY MORNING...

**Thursday through Saturday:** Dry and warm with gusty northeast winds, mainly overnight and through the early morning hours. Temperatures in the 70s and lower 80s (20s C) with humidity values dropping to near 20 percent.

**Fuels and Fire Behavior Advisory for Northern California areas below 3000 feet. – See QR Code**

Wildland Fire Assessment System Outputs (PSA NC07 – Northern Sierra):

- Severe Fire Danger Index – Moderate
- 1000 Hour FM – 7% (3<sup>rd</sup> Percentile)
- 100 Hour FM – 10% (15<sup>th</sup> Percentile)
- ERC – 73 (85<sup>th</sup> Percentile)

### Incident Weather Thresholds

**RH Below 19%, Mid Flame Wind Speed Greater Than 8 MPH, Temperature Above 80 Degrees.**

Wind speeds and relative humidity will be above threshold values during the afternoon hours.

## OUTPUTS

### GENERAL FIRE BEHAVIOR:

Needle and leaf fall from under-burned trees is creating a new fine fuel load. Areas that have already burned can re-burn. The possibility exists fire could travel from heat well interior to near or across containment lines. Expect a slow return to smoldering and surface spread as fine fuel becomes available with increased drying. Consistent dry nighttime conditions and moderate winds will aid the drying of fuels. A return to continuous surface spread in interior pockets is probable.

### SPECIFIC:

#### Branch II:

**DIV OO (River South)** – Smoldering and pockets of surface fire today. Expect surface fire to return to the division. Exposed locations will see the greatest increase in drying and surface fire. Locations near Grizzly Forebay will experience the greatest wind speeds.

**DIV OO (River North)** – The light fuels of the 2008 BTU Lightning Complex fire footprint will remain a concern until the treat of torching along the south side of the river is gone. Fine fuel is dry and abundant (See **Fuels and Fire Behavior Advisory QR Code**) and will support moderate fire during the warmest and windiest part of the day. Moderate upslope runs are possible but unlikely.

**DIV QQ** – Division will be above the inversion and subjected to higher temperatures and lower relative humidity. General winds with varying directions will complicate operational planning. Surface fire in pockets of unburned fuel will be possible.

**DIV MM** – Winds are forecast to align with the river below the line. This alignment could increase wind speed on the lower portions of the spot and contribute to torching and spotting. Down river movement toward Heinz Creek is possible as fuel dry.

**Branch V** – Monitor the fires transition from smoldering to surface fire and the weather to gauge mode changes in fire behavior. Fire behavior can increase quickly when pockets of fuel are encountered. Smoke and surface fire will return over the coming days. Follow mop-up and suppression repair guidelines while planning and implementing operations.

### AIR OPERATIONS:

Conditions are favorable for aviation operations.

### SAFETY

Fire responds to topographic features, runs surprisingly fast up slopes and chutes.

## ***North Complex COVID-19 Expectations***

---

- All incident personnel will follow all local, State and CDC guidelines for COVID-19.
- **As you travel through the local communities proximal to the fire, be mindful that in the State of California, face coverings are required inside local businesses.**
- Being a Federal fire, incident personnel are expected to comply with the following Region 5 and incident guidance.
- Use the COVID-19 Daily Screening Tool, provided in the IAP, to monitor self and module.
- Utilize Module-as-one concepts to reduce the risk of transmitting the novel Coronavirus. This limits “close contacts” to those within the module. A “close contact” is defined as less than 6 feet, for at least 15 minutes with or without face coverings/masks.
- **Social Distancing.** Maintain a minimum of 6’ physical distancing, especially from those outside of your module-as-one.
- **Face Coverings.** Face coverings are required to be worn, in the appropriate manner covering nose and mouth, when at ICP and camps. Outside of camps, all incident personnel will wear a face covering when social distancing is not possible, especially with those outside your module-as-one.
- **Wash your hands.** Wash your hands often with soap and water for at least 20 seconds, especially after blowing you nose, coughing or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Do not use hand sanitizers containing methanol or 1-propanol. Cover all surfaces of your hands and rub them together until they feel dry. Avoid touching your eyes, nose and mouth with unwashed hands.
- Clean and disinfect vehicles and equipment. Disinfect all high-touch surfaces frequently, such as radios, phones, door handles, etc.

In order to use fillable forms, you must have some version of Adobe Acrobat downloaded on your device, or you can send to your email and fill out.
- **Hard copy CTR/Shift Ticket.** You may fill out a hard copy CTR/Shift Ticket, snap a picture and email to Finance OR you may turn in your actual hard copy as usual. If you send in a picture, please make sure it is legible and includes the supervisor's signature at the bottom. The phone numbers listed below are hard line phones, so texting does not work.

### **PLEASE:**

- **Crews need to include a manifest with their first CTR.**
- **Try to submit your times at least every other day. There will be a drop box at Haskins for time submission. We will have a driver bring them daily to Finance at ICP.**
- **Write your email on your CTR**
- **Hazard pay justifications are required on your CTR's in comments section. "H=Hazard" is not enough.**

### **WHEN YOU ARE CLOSE TO DEMOB:**

- **Give Finance a "Courtesy Call" to make sure all your documents have been received.**
- **Follow the demob plan instructions based on your travel route home. This will determine whether your demob will be in-person or remote.**
- **Submit all time documentation (including travel home) ahead of demob.**
- **Send only one representative per resource to finance.**

## Human Resource Message North Complex October 13, 2020

### **HUMAN RESOURCE MESSAGE**

**Communication is a two-way street.** When communication becomes a one-way, it becomes a traffic jam and turns into an issue. Some examples are:

- Someone irritating you and getting on your nerves, but you don't say anything until it boils over and causes a crash.
- A misunderstanding of what someone was trying to communicate to you, but you didn't take the time to clarify what was said and just stewed about it.
- It can be like the telephone game. It starts with specific information and by the time it gets to the end it's very different than what was first communicated.

Whatever it is, clear the communication lines in a respectful manner and make it a smooth safe flowing two way street!

**“The single biggest problem in communication is the illusion that it has taken place”....by George Bernard Shaw**

Feel free to call/text or come by the HRSP yurt if you have questions, concerns, or just want to chat. **Adam Alvarez - (HRSP) – (707) 373-3715**

# Maidu Requests for Visiting Homeland

## 1. "Be good to the land and the land will be good to you." Maidu quote

Thank you fire fighters for helping us keep our homes and cultural sites safe.

## 2. Enjoy your visit in the Mountain Maidu and Valley Maidu homelands.

Archeological sites and the resources they contain are not public property. A place, site or resource may have significance to a family or local tribe, which often carries with it a special level of protection.

## 3. Take care to avoid injuries.

Cultural sites are very old and fragile. Archeological resources are anything over 50 years old and can therefore erode easily. Also, historic dump sites can be hazardous, with sharp glass, rusty metal, and compounds and chemicals that can harm you.

## 4. Enjoy with care.

Oils from skin damage pictographs (rock paintings) and petroglyphs (rock carvings). It ruins irreplaceable historic resources, and it is illegal.

## 5. Don't touch the knickknacks.

ALWAYS LEAVE ARTIFACTS RIGHT WHERE YOU FIND THEM. Out of context, artifacts mean little to archeologists. Often the most important aspect of archeological resources is their relationship to the place and other adjacent resources. Archeological sites and artifacts are our direct link to stories that otherwise might not be told. How can these stories be complete or accurate if the setting is altered or lost? For this and other reasons, it is illegal to move or remove artifacts.

## 6. Feel free to discover.

Some of the sites are identified, and some sites are not recorded. If you happen to come across a cultural site we ask you to treat it like you would any cultural artifact. And note the location and report it to a Resource Advisor.

Speak with resource advisors about the potential for archaeological sites being located adjacent to roads or proposed fire lines. It's easy to destroy features and artifacts in the dark.

- Over approximately 160 years, many changes have reshaped tribal relationships with these vast landscapes as well as with each other, and yet our knowledge of and responsibilities to these incredibly rich and vast landscapes remains strong. **We appreciate your dedication to care for and building your own relationships with our natural environment while protecting these fragile and irreplaceable resources!**

## Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Protect natural and cultural resources from additional potential damage
- Repair roads and drainage structures to a functioning condition

**Sensitive Sites are marked with RED and BLACK CANDY STRIPE flagging.**

**DO NOT repair in Sensitive Sites.**

**BACK-HAUL ALL TRASH AND UN-NEEDED FLAGGING. PLEASE LEAVE SAFETY FLAGGING IN PLACE.**

**PULL BACK SOIL BERMS** All berms present from line construction should be recontoured and spread across the constructed line. Removal of berms will allow water to flow off the fire.

The three objectives of waterbars are: (1) to divert the destructive overland flow of water **off** the fire line; (2) to discharge the water onto areas where the erosive energy can be dissipated; and (3) to aid in the recovery of vegetation.

Fire Line Gradient (% slope)	Distance Between Waterbars (feet)	<b>Think 5-D System</b>	
0-5	None	Distance	Reduce the distance water can run in a straight line
5 to 15	150 to 125	Diagonal	Don't bully the flow, lead it away
15 to 35	75 to 45	Divert	Move the water off the fireline
35 to 65	35 to 65	Discharge	Good water bar is not a dam – must have open outlet.
65+	15	Dissipate	Water should spread out from outlet like a shower not a fire hose.

**DEPTH AND WIDTH:** Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area, at least 18 inches and **not to exceed 24 inches**

**OUTLETS:** Direct water primarily to unburned areas, should not be directing water into stream channels

**ANGLE:** between 30 to 45 degrees

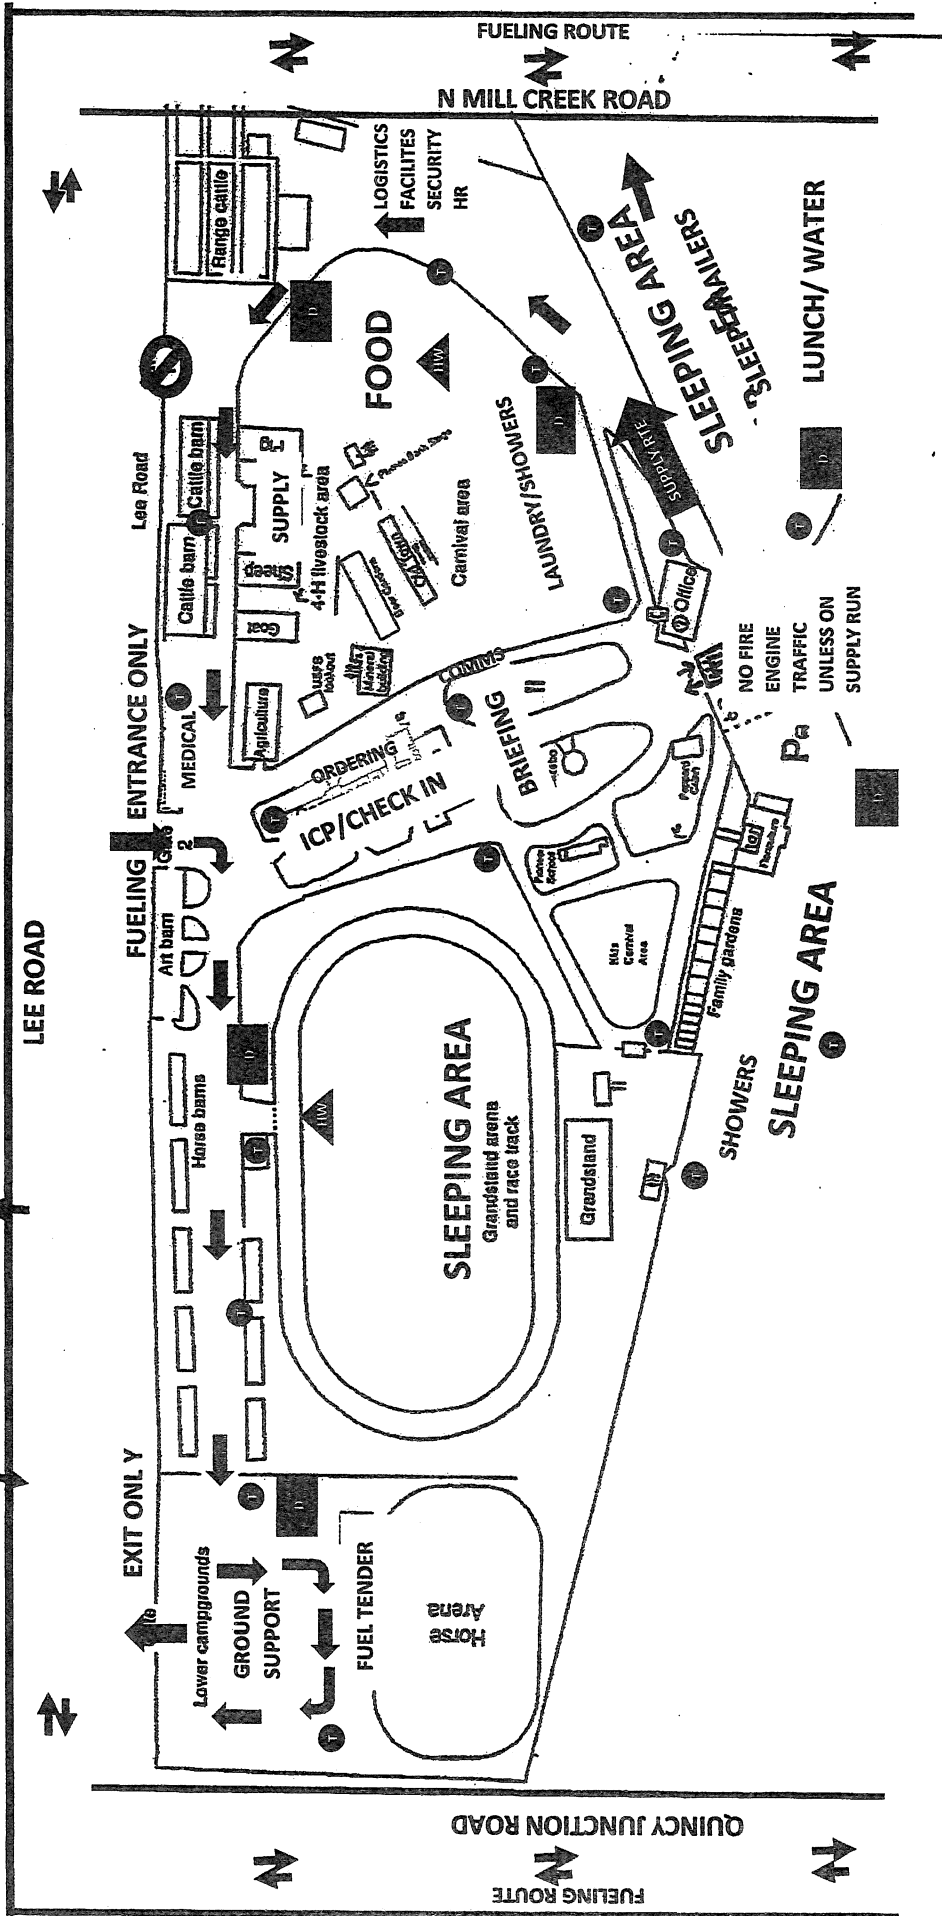

**BLOCK FIRELINE ENTRANCES AND EXITS** using existing materials and berms use available large rocks, large trees, or walls of brush. Use onsite material try to disguise the first 100 feet of hand line and dozer line with slash and other materials where possible as not to entice OHV users.

**WATERCOURSES:** Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

**ROADS:** Reshape soil surfaced roads. Roads should be outsloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.
