## WEATHER DISCUSSION:

### ...RED FLAG WARNING WEDNESDAY THROUGH 11 AM PDT FRIDAY MORNING...

A ridge of high pressure across the Pacific Northwest will strengthen over the next few days bringing gusty northeast winds beginning Wednesday afternoon through early Friday morning. Peak wind speeds may exceed 30 mph (48 kph) with locally higher gusts in favored valleys. The combination of extremely dry fuels, low humidity levels, poor overnight recoveries and strengthening winds will lead to critical fire weather conditions for approximately 36 to 42 hours beginning Wednesday evening. The winds are expected to ease by midday Friday with mild and dry conditions persisting through the weekend.

Wildland Fire Assessment System Outputs (PSA NC07 – Northern Sierra):

- Severe Fire Danger Index – Moderate
- 1000 Hour FM – 7% (3<sup>rd</sup> Percentile)
- 100 Hour FM – 9% (13<sup>th</sup> Percentile)
- ERC – 76 (89<sup>th</sup> Percentile)

### Incident Weather Thresholds

**RH Below 19%, Mid Flame Wind Speed Greater Than 8 MPH, Temperature Above 80 Degrees.**

Wind speeds and relative humidity will be above threshold values during the afternoon hours.

## OUTPUTS

### GENERAL FIRE BEHAVIOR:

Needle and leaf fall from under-burned vegetation is creating a new fine fuel load. Areas that have already burned can re-burn. The possibility exists fire could travel from heat well interior to near or across containment lines. Forecast wind will move fire into heavier pockets and contribute to an increase in torching. Continuous surface spread in interior pockets is probable.

### SPECIFIC:

#### Branch II:

**DIV OO (River South)** – Fire has been reduced to isolated pockets. However, needle cast will increase surface fire potential. Exposed locations will see the greatest increase in drying and surface fire. Torching is possible as previous fire was characterized as low intensity, leaving over story intact in most locations.

**DIV OO (River North)** – The light fuels of the 2008 BTU Lightning Complex fire footprint will remain a concern until the treat of torching along the south side of the river is gone. Fine fuel is dry and abundant (See **Fuels and Fire Behavior Advisory QR Code**) and will support moderate fire during the warmest and windiest part of the day. Moderate upslope runs are possible.

**DIV QQ** – Division will be above the inversion and subjected to higher temperatures and lower relative humidity. Northeast winds will gradually build into the evening hours. Surface fire in pockets of unburned fuel will be possible. Forecast winds will be favorable but fire movement parallel to containment lines in freshly created fuel beds in possible.

**DIV MM** – Winds are forecast to blow across containment lines beginning before shift today. Needle cast will increase the surface fuel load and hold over heat could ignite surface fire in previously cold areas. Down river movement toward Heinz Creek is possible as winds in the North Fork Feather River push down canyon later in the operational period..

**Branch V** – A fresh surface fuel load is forming in areas impacted by moderate fire during previous burn periods. Wind will increase this load in coming days. Fire behavior can increase quickly when pockets of fuel are encountered. Smoke and surface fire will return over the coming days.

### AIR OPERATIONS:

Wind speeds may exceed aircraft capability today.

## SAFETY

Wind shifts and or changes speed. Monitor fire behavior and set appropriate decision points for changing wind speeds and directions.

# North Complex – Safety Message

INCIDENT: # CA-PNF - 001308

DATE: 10-14-2020 TIME: 0700 – 1900 Day Shift

## Leadership

All leaders of firefighters have the responsibility to provide complete briefings that include a clearly stated “Leader’s Intent.”

- **Task** = **What** is to be done
- **Purpose** = **Why** it is to be done
- **End State** = How it should **look** when done

## Beware of Rolling Material

- Be alert for rolling material on the fireline and roadways.
- Shout out if you see rolling material.
- Maintain spacing while working **AND** driving.
- Assess parking areas for possible rollout hazard.
- Maintain communications and report all road obstructions.

## Points to Ponder

- Vehicle accidents are a common cause of firefighter injuries – **Drive Smart**
- Wildland FF’s are injured or killed more annually from falling trees – **Look Up**
- Ash pits and stump holes are the most common cause of burn injuries – **Look Down**
- FF’s can be the cause of, or recipient of rolling debris – **Look Around**
- Heat, long hours, and repetition can lead to complacency and injuries – **Pace yourself**
- Multiple Resources of multiple typing doing multiple jobs = Multiple potential for injury – **Stay Focused**
- Communicate clearly and get confirmation that your message is understood – **Communicate Clearly**

## Statistics

- NFPA estimates 65,880 FF injuries occurred in the line of duty in 2017
- An estimated 45% of those injuries occurred during fire-ground operations
- The leading injuries during fire-ground operations involved injuries such as sprains, strains, and muscular pain attributed to fatigue
- An estimated 19% of those injuries involved loss of work
- Injuries are more prevalent between the hours of 2:00 and 5:00 PM

## ***North Complex COVID-19 Expectations***

---

- All incident personnel will follow all local, State and CDC guidelines for COVID-19.
- **As you travel through the local communities proximal to the fire, be mindful that in the State of California, face coverings are required inside local businesses.**
- Being a Federal fire, incident personnel are expected to comply with the following Region 5 and incident guidance.
- Use the COVID-19 Daily Screening Tool, provided in the IAP, to monitor self and module.
- Utilize Module-as-one concepts to reduce the risk of transmitting the novel Coronavirus. This limits “close contacts” to those within the module. A “close contact” is defined as less than 6 feet, for at least 15 minutes with or without face coverings/masks.
- **Social Distancing.** Maintain a minimum of 6’ physical distancing, especially from those outside of your module-as-one.
- **Face Coverings.** Face coverings are required to be worn, in the appropriate manner covering nose and mouth, when at ICP and camps. Outside of camps, all incident personnel will wear a face covering when social distancing is not possible, especially with those outside your module-as-one.
- **Wash your hands.** Wash your hands often with soap and water for at least 20 seconds, especially after blowing you nose, coughing or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Do not use hand sanitizers containing methanol or 1-propanol. Cover all surfaces of your hands and rub them together until they feel dry. Avoid touching your eyes, nose and mouth with unwashed hands.
- Clean and disinfect vehicles and equipment. Disinfect all high-touch surfaces frequently, such as radios, phones, door handles, etc.

# Maidu Requests for Visiting Homeland

## 1. "Be good to the land and the land will be good to you." Maidu quote

Thank you fire fighters for helping us keep our homes and cultural sites safe.

## 2. Enjoy your visit in the Mountain Maidu and Valley Maidu homelands.

Archeological sites and the resources they contain are not public property. A place, site or resource may have significance to a family or local tribe, which often carries with it a special level of protection.

## 3. Take care to avoid injuries.

Cultural sites are very old and fragile. Archeological resources are anything over 50 years old and can therefore erode easily. Also, historic dump sites can be hazardous, with sharp glass, rusty metal, and compounds and chemicals that can harm you.

## 4. Enjoy with care.

Oils from skin damage pictographs (rock paintings) and petroglyphs (rock carvings). It ruins irreplaceable historic resources, and it is illegal.

## 5. Don't touch the knickknacks.

ALWAYS LEAVE ARTIFACTS RIGHT WHERE YOU FIND THEM. Out of context, artifacts mean little to archeologists. Often the most important aspect of archeological resources is their relationship to the place and other adjacent resources. Archeological sites and artifacts are our direct link to stories that otherwise might not be told. How can these stories be complete or accurate if the setting is altered or lost? For this and other reasons, it is illegal to move or remove artifacts.

## 6. Feel free to discover.

Some of the sites are identified, and some sites are not recorded. If you happen to come across a cultural site we ask you to treat it like you would any cultural artifact. And note the location and report it to a Resource Advisor.

Speak with resource advisors about the potential for archaeological sites being located adjacent to roads or proposed fire lines. It's easy to destroy features and artifacts in the dark.

- Over approximately 160 years, many changes have reshaped tribal relationships with these vast landscapes as well as with each other, and yet our knowledge of and responsibilities to these incredibly rich and vast landscapes remains strong. **We appreciate your dedication to care for and building your own relationships with our natural environment while protecting these fragile and irreplaceable resources!**

## Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Protect natural and cultural resources from additional potential damage
- Repair roads and drainage structures to a functioning condition

**Sensitive Sites are marked with RED and BLACK CANDY STRIPE flagging.**

**DO NOT repair in Sensitive Sites.**

**BACK-HAUL ALL TRASH AND UN-NEEDED FLAGGING. PLEASE LEAVE SAFETY FLAGGING IN PLACE.**

**PULL BACK SOIL BERMS** All berms present from line construction should be recontoured and spread across the constructed line. Removal of berms will allow water to flow off the fire.

The three objectives of waterbars are: (1) to divert the destructive overland flow of water **off** the fire line; (2) to discharge the water onto areas where the erosive energy can be dissipated; and (3) to aid in the recovery of vegetation.

Fire line Gradient (% slope)	Distance Between Waterbars (feet)	<b>Think 5-D System</b>	
0-5	None	Distance	Reduce the distance water can run in a straight line
5 to 15	150 to 125	Diagonal	Don't bully the flow, lead it away
15 to 35	75 to 45	Divert	Move the water off the fireline
35 to 65	35 to 65	Discharge	Good water bar is not a dam – must have open outlet.
65+	15	Dissipate	Water should spread out from outlet like a shower not a fire hose.

**DEPTH AND WIDTH:** Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area, at least 18 inches and **not to exceed 24 inches**

**OUTLETS:** Direct water primarily to unburned areas, should not be directing water into stream channels

**ANGLE:** between 30 to 45 degrees

**BLOCK FIRELINE ENTRANCES AND EXITS** using existing materials and berms use available large rocks, large trees, or walls of brush. Use onsite material try to disguise the first 100 feet of hand line and dozer line with slash and other materials where possible as not to entice OHV users.

**WATERCOURSES:** Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

**ROADS:** Reshape soil surfaced roads. Roads should be outsloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.
