Incident Weather Thresholds

RH Below 19%, Mid Flame Wind Speed Greater Than 8 MPH, Temperature Above 80 Degrees.

Wind speeds and relative humidity will be above threshold values during the afternoon hours.

OUTPUTS

GENERAL FIRE BEHAVIOR:

Isolated interior surface fire can be expected today. Forecast winds will continue into the afternoon hours and promote small pockets of fuel remaining on the landscape to consume. Fire movement into larger pockets of unburned fuel is unlikely. Resulting fire behavior could transition to torching. Torching near control lines may result in sufficient ember production to create spots. Wind and slope alignment would create rapid upslope runs transitioning to backing fire on leeward slopes.

SPECIFIC:

Branch II:

DIV OO (River South) – Fire has been reduced to isolated pockets. Exposed locations and along the river will see the greatest wind influence. Pockets of heavy fuel could produce torching. Expect low relative humidity into the evening hours.

DIV OO (River North) – The light fuels of the 2008 BTU Lightning Complex fire footprint will remain a concern until the treat of torching along the south side of the river is gone. Fine fuel is dry and abundant (See **Fuels and Fire Behavior Advisory QR Code**) and will support moderate fire during the warmest and windiest part of the day. Moderate upslope runs are possible.

DIV QQ – Division will be above the inversion and subjected to higher temperatures and lower relative humidity. Northeast winds will increase into the evening hours. Surface fire in pockets of unburned fuel will be possible. Forecast winds will be favorable but fire movement parallel to containment lines in freshly created fuel beds is possible.

DIV MM – Winds are forecast to blow across containment lines today. Torching and ember production are the greatest threat to the line. Surface fuel load and hold over heat could ignite surface fire in previously cold areas. Down river movement toward Heinz Creek is possible as winds in the North Fork Feather River push down canyon.

Branch V – A fresh surface fuel load is forming in areas impacted by moderate fire during previous burn periods. This is more prevalent on the western edge of the fire. Forecast wind will increase this load. Fire behavior in light fuels could increase quickly when pockets of heavy fuel are encountered.

AIR OPERATIONS:

Wind speeds may exceed aircraft capability today.

SAFETY

Know what your fire is doing at all times. Monitor fire behavior and anticipate the next big change.

In timber increase safety distance to 2 ½ times canopy height. • When possible, use mechanized equipment to pull back and break down dozer pushes • Avoid walking or climbing over pushes due to burning debris within the push. • Avoid white ash pockets and mop up with caution.
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22.) • Limit number of personnel around snags and their exposure time; fallers must be qualified. • Be alert around hazard trees during wind events, do not park or take a break near them. • The hazard zone extends a minimum of 2½ tree lengths.
ALL	MOP-UP OPERATIONS	<ul style="list-style-type: none"> • Balance the risk of exposure to hazards against the mop-up objective potentially achieved. • Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; shorten shifts to increase rest when appropriate. • Provide motivation to workers to maintain situational awareness and avoid complacency. • Evaluate mop up distance against what is safe and necessary. • Review and follow "Look Up, Look Down, Look Around" procedures (IRPG pgs. 3-4).
ALL	ACCOUNTABILITY	<ul style="list-style-type: none"> • Know where your troops are at all times. • Know the plan, brief the plan, and implement the plan. • Ensure you have communications with adjoining forces, and they know the plan. • Check in and out when traveling through Branches and Divisions. • If you see someone that looks out of place, stop, and ask what they are doing. • As fire conditions escalate and your chasing spots, do not over commit. • Back off, regroup, and re-engage.

North Complex COVID-19 Expectations

- All incident personnel will follow all local, State and CDC guidelines for COVID-19.
- **As you travel through the local communities proximal to the fire, be mindful that in the State of California, face coverings are required inside local businesses.**
- Being a Federal fire, incident personnel are expected to comply with the following Region 5 and incident guidance.
- Use the COVID-19 Daily Screening Tool, provided in the IAP, to monitor self and module.
- Utilize Module-as-one concepts to reduce the risk of transmitting the novel Coronavirus. This limits “close contacts” to those within the module. A “close contact” is defined as less than 6 feet, for at least 15 minutes with or without face coverings/masks.
- **Social Distancing.** Maintain a minimum of 6’ physical distancing, especially from those outside of your module-as-one.
- **Face Coverings.** Face coverings are required to be worn, **in the appropriate manner covering nose and mouth**, when at ICP and camps. Outside of camps, all incident personnel will wear a face covering when social distancing is not possible, especially with those outside your module-as-one.
- **Wash your hands.** Wash your hands often with soap and water for at least 20 seconds, especially after blowing you nose, coughing or sneezing. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Do not use hand sanitizers containing methanol or 1-propanol. Cover all surfaces of your hands and rub them together until they feel dry. Avoid touching your eyes, nose and mouth with unwashed hands.
- Clean and disinfect vehicles and equipment. Disinfect all high-touch surfaces frequently, such as radios, phones, door handles, etc.

Maidu Requests for Visiting Homeland

1. "Be good to the land and the land will be good to you." Maidu quote

Thank you fire fighters for helping us keep our homes and cultural sites safe.

2. Enjoy your visit in the Mountain Maidu and Valley Maidu homelands.

Archeological sites and the resources they contain are not public property. A place, site or resource may have significance to a family or local tribe, which often carries with it a special level of protection.

3. Take care to avoid injuries.

Cultural sites are very old and fragile. Archeological resources are anything over 50 years old and can therefore erode easily. Also, historic dump sites can be hazardous, with sharp glass, rusty metal, and compounds and chemicals that can harm you.

4. Enjoy with care.

Oils from skin damage pictographs (rock paintings) and petroglyphs (rock carvings). It ruins irreplaceable historic resources, and it is illegal.

5. Don't touch the knickknacks.

ALWAYS LEAVE ARTIFACTS RIGHT WHERE YOU FIND THEM. Out of context, artifacts mean little to archeologists. Often the most important aspect of archeological resources is their relationship to the place and other adjacent resources. Archeological sites and artifacts are our direct link to stories that otherwise might not be told. How can these stories be complete or accurate if the setting is altered or lost? For this and other reasons, it is illegal to move or remove artifacts.

6. Feel free to discover.

Some of the sites are identified, and some sites are not recorded. If you happen to come across a cultural site we ask you to treat it like you would any cultural artifact. And note the location and report it to a Resource Advisor.

Speak with resource advisors about the potential for archaeological sites being located adjacent to roads or proposed fire lines. It's easy to destroy features and artifacts in the dark.

- Over approximately 160 years, many changes have reshaped tribal relationships with these vast landscapes as well as with each other, and yet our knowledge of and responsibilities to these incredibly rich and vast landscapes remains strong. **We appreciate your dedication to care for and building your own relationships with our natural environment while protecting these fragile and irreplaceable resources!**

Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression repair is:

- Reduce the potential for soil erosion and sedimentation
- Protect natural and cultural resources from additional potential damage
- Repair roads and drainage structures to a functioning condition

**Sensitive Sites are marked with RED and BLACK CANDY STRIPE flagging.
DO NOT repair in Sensitive Sites.**

BACK-HAUL ALL TRASH AND UN-NEEDED FLAGGING. PLEASE LEAVE SAFETY FLAGGING IN PLACE.

PULL BACK SOIL BERMS All berms present from line construction should be recontoured and spread across the constructed line. Removal of berms will allow water to flow off the fire.

The three objectives of waterbars are: (1) to divert the destructive overland flow of water **off** the fire line; (2) to discharge the water onto areas where the erosive energy can be dissipated; and (3) to aid in the recovery of vegetation.

Fire line Gradient (% slope)	Distance Between Waterbars (feet)	Think 5-D System	
0-5	None	Distance	Reduce the distance water can run in a straight line
5 to 15	150 to 125	Diagonal	Don't bully the flow, lead it away
15 to 35	75 to 45	Divert	Move the water off the fireline
35 to 65	35 to 65	Discharge	Good water bar is not a dam – must have open outlet.
65+	15	Dissipate	Water should spread out from outlet like a shower not a fire hose.

DEPTH AND WIDTH: Waterbars need to be cut into surface, do not simply push up soil. They should be deep enough to redirect the water from expected rain to area, at least 18 inches and **not to exceed 24 inches**

OUTLETS: Direct water primarily to unburned areas, should not be directing water into stream channels

ANGLE: between 30 to 45 degrees

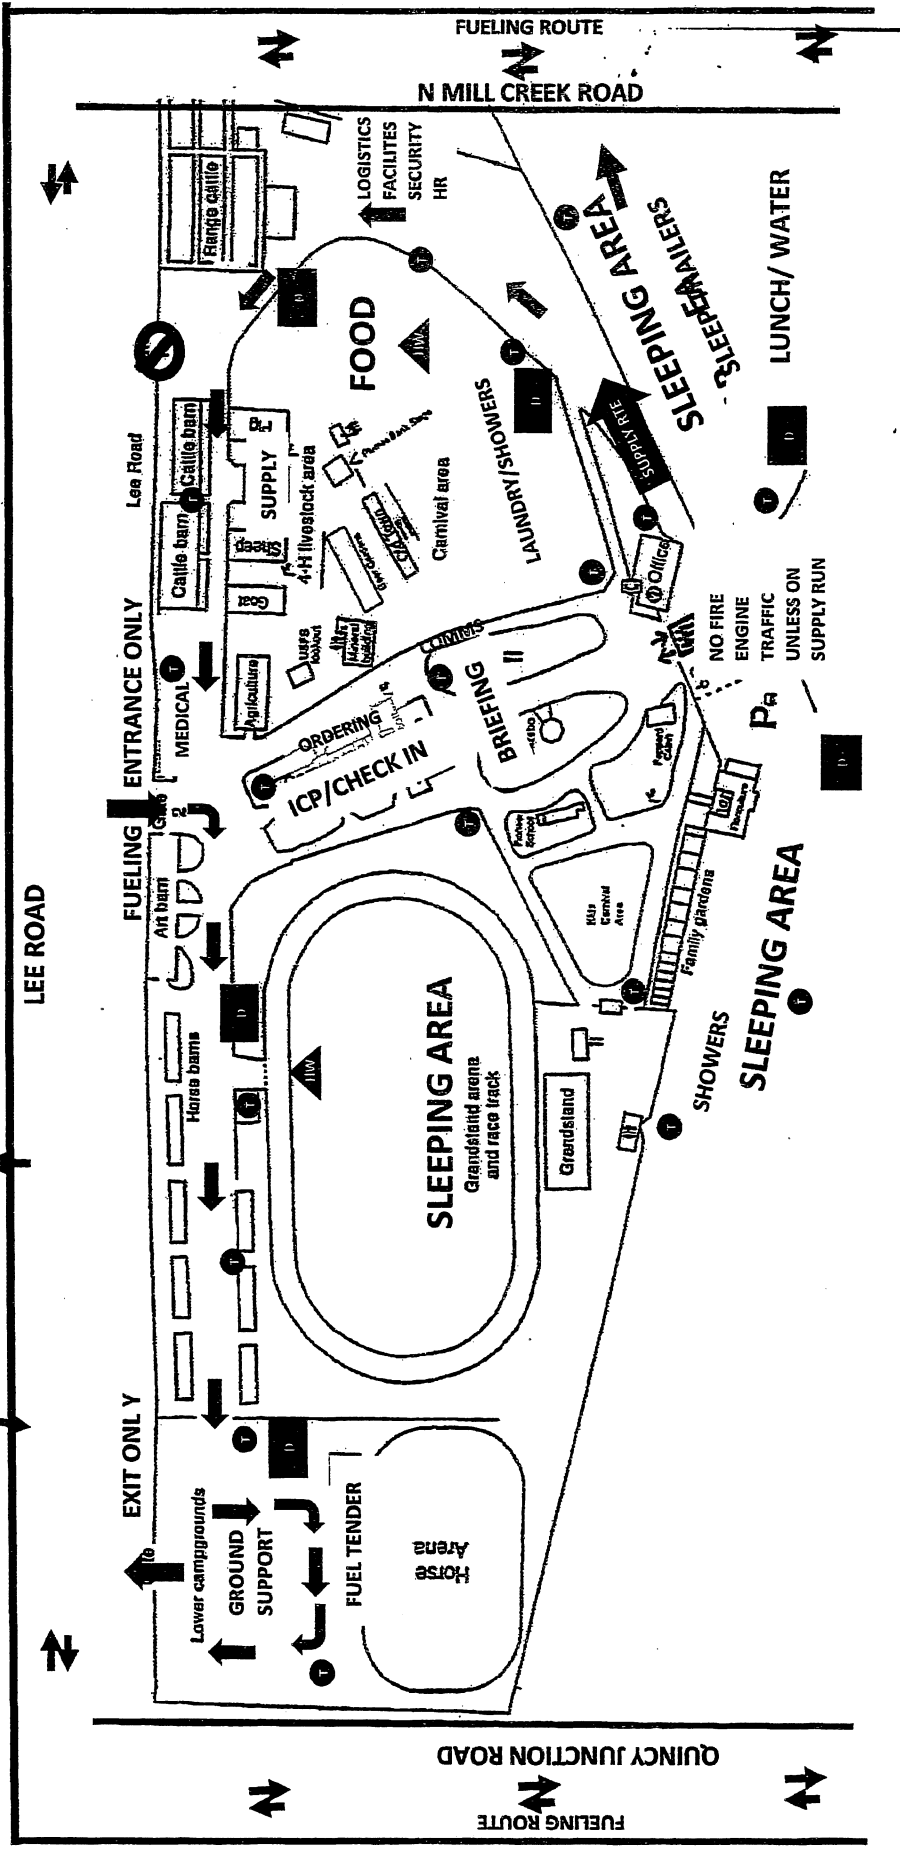

BLOCK FIRELINE ENTRANCES AND EXITS using existing materials and berms use available large rocks, large trees, or walls of brush. Use onsite material try to disguise the first 100 feet of hand line and dozer line with slash and other materials where possible as not to entice OHV users.

WATERCOURSES: Work with READs to determine appropriate repair needs. Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

ROADS: Reshape soil surfaced roads. Roads should be outsloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.
