Red Salmon Complex Weather Forecast

FORECAST NO: 3
UNIT: Six Rivers / Shasta Trinity
SHIFT DATE: Sunday, August 2, 2020
PREDICTION FOR: 0600 - 0600
FORECAST ISSUED: 2000 hrs. 8/1/2020

SIGNED: 
Jon Bonk: jon.bonk@noaa.gov
Incident Meteorologist
Call or Text Obs to: (240)778-5287

Continued Poor Humidity Recovery; Minor Wind Changes

WEATHER DISCUSSION: Low pressure off the British Columbia Coast will slowly drift north the next couple days allowing high pressure to drift west and over the fire. The subsidence inversion continues to sit over the fires with smoke staying fairly close to the ridges. Today's difference is ridge winds will come from the northwest most of the day. This means smoke from the Red fire may drift over the Salmon fire to further limit burning conditions and aviation support. Poor humidity recovery expected again tonight with little change from last night's conditions. Tuesday and Wednesday, weak low pressure sets up just off the northern California coast. Do not feel overly excited about thunderstorm possibilities at this time, but will not completely rule them out either.

Today (0600-1800):

Weather: Sunny. Low smoke will hang over the fire area at times.

High Temperatures: Red Fire: 71-74°; Salmon Fire 74-78°.

Afternoon Minimum Humidity: Red Fire 25-30%; Salmon 20-25%; rising about 10% by 1800 hrs.

20 Foot Winds:

Lower/Mid Slopes: Variable 0-3 mph until 1100, then terrain driven 4-8 mph.

Upper Slopes: Variable 0-3 mph until 0900, then becoming Northwest 6-8 mph with gusts up to 15 mph.

LAL: 1 **Chc of Wetting Rain (0.10"):** 0%

Stability: Low level inversion lifts around 1100 hrs. Subsidence inversion near the ridges holds all day.

Afternoon Mixing Height: 2,000 feet AGL.

Tonight (1800-0600):

Weather: Clear. Smoke settling across the fire area.

Temperatures: Red Fire: 55-60°; Salmon Fire 55-60°.

Overnight Humidity: Peaking 45-50% in the evening, then decreasing overnight to:
Red Fire 35-40%; Salmon 30-35%.

20 Foot Winds:

Lower/Mid Slopes: Variable 3-5 mph until 2300, then drainage 3-5 mph.

Ridges: Northwest 6-8 mph with gusts up to 15 mph until 2300, then North 4-7 mph

LAL: 1. **Chc of Wetting Rain (0.10"):** 0%

Inversion: Weak inversion and thermal belt around 1,000 ft MSL. Strong inversion and thermal belt around 5,000 ft MSL.

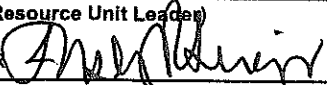

Monday: Mostly sunny with patchy smoke hanging low over the fires. Max Temps: 67-73°. Afternoon RH: Red Fire 24-27%, Salmon Fire 22-25%. Afternoon Winds - Lower Slopes: Variable/Terrain Driven. Upper slopes: Northwest 6-8 mph.

Tuesday and Wednesday Outlook: 10% chance of thunderstorms. Storms unlikely to generate much rain. Slightly cooler with slightly higher humidity.

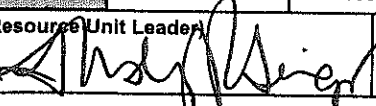

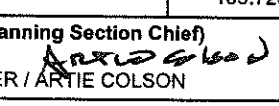

Weather Near the Fires:

6. Control Operations/Work Assignments:						
Continue to prep indirect line and scout ahead. Improve indirect line Whitey's Peak to Salmon Mtn.						
7. Special Instructions:						
Utilize MIST tactics. All line resources will spike overnight. Utilize READ's for cultural and environmental resource concerns. ID helispots and drop points, get lat-longs. Please return nets, swivels, and ice chests. Back-haul trash and excess equipment. All resources use QR code to check-in.

HEALTH AND SAFETY MESSAGE

SAFETY starts with **YOU**

We are ALL accountable for SAFE behaviors

Date: August 2, 2020

INCIDENT: Red Salmon Complex

Day Operations

Major Hazards and Risks:

- **COVID-19:** Remember to limit the number of people picking up meals, attending briefings, and generally interacting with your module. Wash hands frequently, practice social distancing, wear face covering when required, clean and disinfect frequently, touched surfaces, don't share cell phones, radios etc, and operate as a "module of one".
- **HAZARD TREES:** Assess ALL Trees in Work Areas....In addition to suppression and mop-up operations, assess hazard trees when you take breaks.

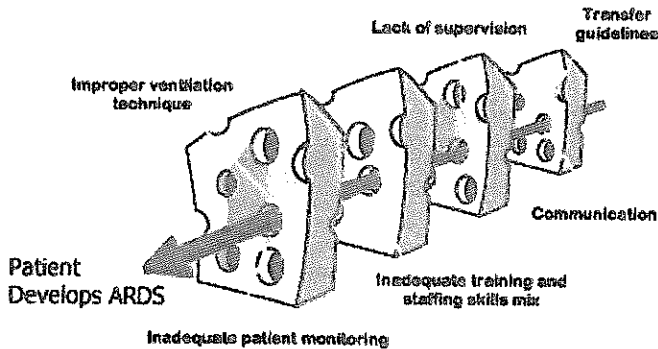

Fire Order of the Day:

Maintain control of your forces at all times

- ❖ **TASK.....**What is to be done.....Strategy and tactics
- ❖ **PURPOSE.....**Why it is to be done.....Big picture.....who, what, when, where, why, etc.....
- ❖ **END STATE.....**How it should look when done....Quantify your expectations.....Leaders Intent

Situation Awareness

- Speak up if you see something that looks wrong!!!
- Get a good briefing prior to beginning task
- Ask if you don't understand!!!!

HELP BREAK THE "ERROR CHAIN"!!!

"I lift, you grab. ... Was that concept just a little too complex, Carl?"

Give clear instructions and insure they are understood!!!

Thanks from your Safety Team!!

Greg Marfil SOF2 Pedro Martinez SOF2

Nick Bianchini SOF2(T)

Always use the "Risk Management Process" in your decision making process.....refer to IRPG page 1 for more information.....

[Handwritten signature] 8/1/2020

MINIMUM IMPACT SUPPRESSION TECHNIQUES (MIST)

Fire Management Tool Box on Wilderness.Net

Firefighter and public safety is always the first priority in any suppression action, including operations in wilderness. Use of MIST provides guidelines for preserving wilderness areas for present and future generations.

When evaluating fire management actions, the potential degradation of wilderness character should be considered before, and given significantly more weight than, economic efficiency and convenience. Unless human life or private property is immediately threatened, only those actions that preserve wilderness character and/or have localized, short-term adverse impacts to wilderness character should be implemented.

FIRELINE CONSTRUCTION

- Take advantage of natural barriers wherever possible.
- Use cold-trail and/or wet line when appropriate.
- If the decision is made to construct line, use only the width and depth necessary for halting the fire spread. Minimize ground disturbance.
- Minimize bucking and cutting of trees to establish fire line; build line around logs when feasible and effective.
- Limb vegetation only to the extent necessary to stop fire spread.
- Avoid cutting live trees whenever possible.
- As an alternative to felling, consider allowing ignited trees and snags to burn themselves out. Ensure adequate safety measures are communicated to those affected by this decision.
- If burning trees or snags pose a serious threat of spreading firebrands, extinguish the fire with water and/or dirt wherever possible.

AIR OPERATIONS

- Limit retardant or foam use, use water instead. If retardant and foam is appropriate, avoid drops near water.

HELISPOTS

- Minimize the number of helispots in wilderness. Use alternate sites outside wilderness when possible or consider using pack strings (mules).
- Use natural openings as much as possible.
- Size the helispots for the appropriate size helicopter. Consider long line remote hook operations instead of helispots for logistical support.

SPIKE CAMPS

- Minimize the use of spike camps in wilderness. If spike camps are needed, use existing camp sites where available.
- Avoid camping in wet meadows, along streams or on lake shores. Resource Advisors can help identify suitable sites.
- Layout camp carefully from the start, identify areas for cooking, sleeping, washing, latrines and water supplies.
- In small camps individuals can use "cat hole" method

of disposal (6"-8" hole) short term. In larger camps locate community latrines 300' from water.

- Designate wash areas away from streams, and provide for gray water disposal. Do not use soap, shampoo, or other chemicals near waterways.
- Store food away from camp and so that it is not accessible to wildlife.
- Store garbage so that it is not accessible to wildlife, and remove it as frequently as possible.
- Use stoves to cook when possible. Minimize the use of campfires, and use either a pit or mound ring fire with dead or downed small diameter firewood. Do not build rock ring campfires. An old fire shelter placed under the coals helps protect the soil.
- Limit travel ways within, to, and from camp.

PERSONAL SPIKE CAMP CONDUCT

- Select durable sites for tents.
- Do not clear vegetation or dig trenches to create bedding sites.
- Pack out all garbage, including candy wrappers, cigarette butts, and flagging.
- Carry water and bathe away from lakes and streams.
- Do not use nails in trees or limb trees for bedding.
- Evaluate the short and long term impacts of your decisions.

REPAIR

- Remove signs, flagging, garbage, and equipment used during fire suppression.
- Restore disturbed areas.
- Scarify the top 2-4" of soil in heavily compacted areas and scatter needles, twigs, branches, over the area.
- Rehabilitate newly established trails on slopes <6%, water bar trails created on steeper slopes.
- Scatter cut material and camouflage cut surfaces with dirt.
- Do not use non-native materials, avoid introducing invasive species.

Red Salmon Complex
