\*\*\* Red Flag Warning Today and Monday for Dry and Very Unstable Conditions \*\*\*

**WEATHER DISCUSSION:** The atmosphere is unstable enough today where intense heat WILL break the weak mid-level inversion and produce a convective column. Temperatures are hotter and drier today after poor humidity recovery and warm ridge temperatures last night. Expect ridge winds to make a diurnally driven easterly to westerly reversal around mid-day as we've seen several times in the last week. Afternoon/evening winds and the unstable conditions would likely transport fire brands toward the North-Northeast in the afternoon before shifting toward the east and finally east-southeast by 1800 hours. Conditions become very hot and unstable on Monday and am expecting the mid-level inversion will break and allow significant ventilation during the afternoon and evening hours. Additionally, thunderstorms may be in the vicinity of Weaverville Helibase on Monday.

Today (0600-1800):

Weather: Sunny and hot. Patchy low smoke over the fires.

High Temperatures: Red Fire: 84-93°; Salmon Fire 82-86°.

Humidity: Red Fire 22-29%; Salmon 28-32%; near 1300 hrs, then slowly rising through 1800 hrs.

20 Foot Winds:

Lower/Mid Slopes: Variable 0-3 mph until 1000, then terrain driven 4-8 mph.

Upper Slopes: Northeast 4-7 mph until 1200, becoming West then Northwest 5-8 mph with gusts up to 15 mph.

LAL: 1                      Chance of Wetting Rain (0.10"): 0%

Stability: Low valley inversion lifts around 1000 hrs. Prolonged intense heat will break the mid-level inversion.

Afternoon Mixing Height: Valleys: 5,000 feet AGL. Ridges: 9,000 feet AGL if ventilating.

Tonight (1800-0600):

Weather: Clear. Smoke settling across the fire area drainages.

Low Temperatures: Red Fire: 64-68°; Salmon Fire: 67-73°.

Humidity: Red Fire: Peaking at 45-50% near 2300 hrs, then falling to 25-30% by 0600 hrs.

Salmon Fire: Peaking at 40-45% near 2300 hrs, then falling to 23-27% by 0600 hrs.

20 Foot Winds:

Lower/Mid Slopes: Variable 3-5 mph until 2300 hrs, then drainage 4-6 mph.

Ridges: Northwest 5-8 mph with gusts to 15 mph until 2200 hrs, then Northeast 5-8 mph.

LAL: 1                      Chance of Wetting Rain (0.10"): 0%

Inversion: Strong inversion/thermal belt centered around 4,000 ft MSL.

Monday: Very hot. Areas of smoke. Full ventilation possible. Thunderstorms possible near Weaverville Helibase.

Max Temps: 83-94°. Afternoon RH: Red Fire 20-27%, Salmon Fire 21-25%. Afternoon Winds - Lower Slopes:

Variable/Terrain Driven. Upper slopes: West-Northwest 5-8 mph.

Tuesday and Wednesday Outlook: Gradual cooling with afternoon humidity rising to 30-35% by Wednesday. Continued moderate to poor humidity recovery. Conditions becoming less unstable with mixing heights falling to 7,000 feet Tuesday and 6,000 feet on Wednesday.

### FIRE BEHAVIOR

#### GENERAL

Fire activity will continue to increase today with dry fuels and a weak mid-level inversion. Heat generated from the fire or from burn out operations has potential to break the inversion layer leading to an increase fire activity. Rapid rates of spread with torching, crowning and long-distance spotting should be expected if a convection column develops. Otherwise expect to see surface fire spread with upslope runs when in alignment with slope.

Spotting distance: up to .3 of a mile.

Probability of ignition: Near 90%.

Predicted ERC: 81st percentile    Timber ROS: 7-12 ch/hr.    Timber FL: 6-10 feet

Predicted BI: 75th percentile    Brush ROS: 1-3 ch/hr.    Brush FL: 1-4 feet

#### SPECIFIC

##### SPECIFIC FIRE BEHAVIOR:

**Branch I (Red):** The fire continues to spread and burn actively. Surface fire spread with single and group torching, running and spotting should be expected with slope/wind alignment on all flanks.

**Branch V (Salmon):** Large concentrations of heavy fuels continue to burn near the line will cause spotting. Interior pockets will continue to burn as the fire consumes available fuels.

**Branch VII (Packsaddle Ridge):** The fire has crossed Red Cap Creek drainage and is on a very steep northeast facing slope. Divisions U/W can expect active fire behavior with terrain driven runs, torching and spotting.

### AIR OPERATIONS

Low level inversion lifts around 1000 hrs. Smoke will impact aviation on all Branches.

### SAFETY

Another day of active burning conditions is expected, know the locations of your escape routes and safety zones.

\*\*Base all action on current and expected fire behavior\*\*

## **HUMAN RESOURCE MESSAGE**

### **RESPECT**

I am encouraged with my observation of the standard of behavior displayed on this assignment, where positive interaction with each other seems to be the rule and not the exception.

As society wrestles to depart from what we've known in the past as normal, this camp expresses respect of cultural diversities, reflective of those individuals who make up our society, which you all appeared to recognize, accept and respect.

I applaud your commitment towards treating each other with dignity and respect in camp and on the line. Your professionalism has been second to none.

Be safe ~ Have a great shift.

Feel free to call/text or come by the HRSP yurt if you have questions, concerns, or just want to chat. ~ HRSP Trainee: Adam Alvarez – (707) 373-8715

## MINIMUM IMPACT SUPPRESSION TECHNIQUES (MIST)

Fire Management Tool Box on Wilderness.Net

### FIRELINE CONSTRUCTION

- Take advantage of natural barriers wherever possible.
- Use cold-trail and/or wet line when appropriate.
- If the decision is made to construct line, use only the width and depth necessary for halting the fire spread. Minimize ground disturbance.
- Minimize bucking and cutting of trees to establish fire line; build line around logs when feasible and effective.
- Limb vegetation only to the extent necessary to stop fire spread.
- Avoid cutting live trees whenever possible.
- As an alternative to felling, consider allowing ignited trees and snags to burn themselves out. Ensure adequate safety measures are communicated to those affected by this decision.
- If burning trees or snags pose a serious threat of spreading firebrands, extinguish the fire with water and/or dirt wherever possible.

### AIR OPERATIONS

- Limit retardant or foam use, use water instead. If retardant and foam is appropriate, avoid drops near water.

### HELISPOTS

- Minimize the number of helispots in wilderness. Use alternate sites outside wilderness when possible or consider using pack strings (mules).
- Use natural openings as much as possible.
- Size the helispots for the appropriate size helicopter. Consider long line remote hook operations instead of helispots for logistical support.

### SPIKE CAMPS

- Minimize the use of spike camps in wilderness. If spike camps are needed, use existing camp sites where available.
- Avoid camping in wet meadows, along streams or on lake shores. Resource Advisors can help identify suitable sites.
- Layout camp carefully from the start, identify areas for cooking, sleeping, washing, latrines and water supplies.
- In small camps individuals can use "cat hole" method

Firefighter and public safety is always the first priority in any suppression action, including operations in wilderness. Use of MIST provides guidelines for preserving wilderness areas for present and future generations.

When evaluating fire management actions, the potential degradation of wilderness character should be considered before, and given significantly more weight than, economic efficiency and convenience. Unless human life or private property is immediately threatened, only those actions that preserve wilderness character and/or have localized, short-term adverse impacts to wilderness character should be implemented.

of disposal (6"-8" hole) short term. In larger camps locate community latrines 300' from water.

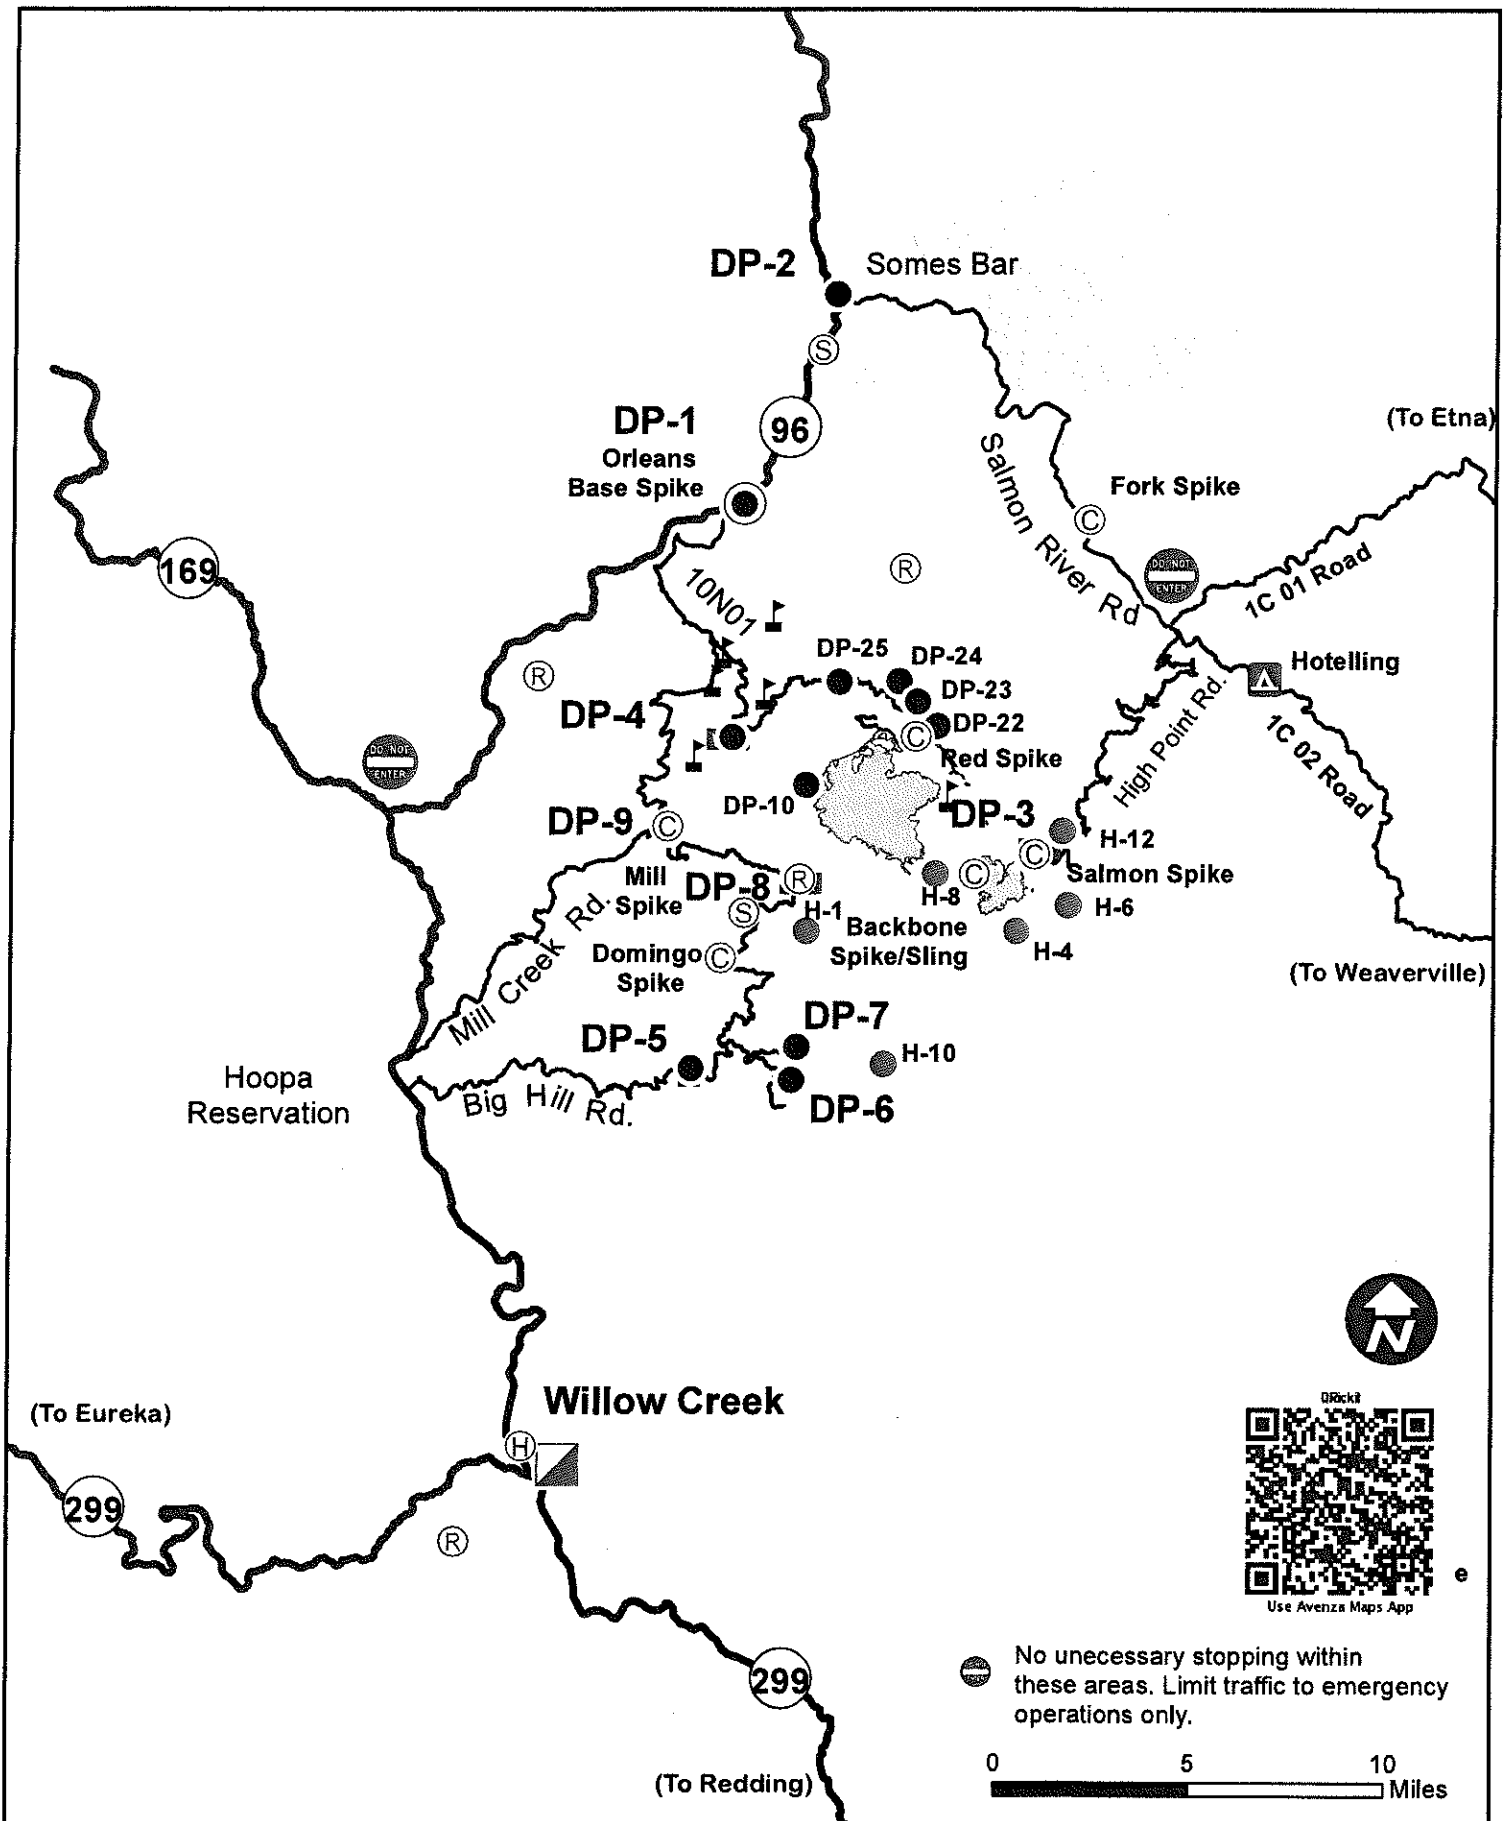

- Designate wash areas away from streams, and provide for gray water disposal. Do not use soap, shampoo, or other chemicals near waterways.
- Store food away from camp and so that it is not accessible to wildlife.
- Store garbage so that it is not accessible to wildlife, and remove it as frequently as possible.
- Use stoves to cook when possible. Minimize the use of campfires, and use either a pit or mound ring fire with dead or downed small diameter firewood. Do not build rock ring campfires. An old fire shelter placed under the coals helps protect the soil.
- Limit travel ways within, to, and from camp.

### PERSONAL SPIKE CAMP CONDUCT

- Select durable sites for tents.
- Do not clear vegetation or dig trenches to create bedding sites.
- Pack out all garbage, including candy wrappers, cigarette butts, and flagging.
- Carry water and bathe away from lakes and streams.
- Do not use nails in trees or limb trees for bedding.
- Evaluate the short and long term impacts of your decisions.

### REPAIR

- Remove signs, flagging, garbage, and equipment used during fire suppression.
- Restore disturbed areas.
- Scarify the top 2-4" of soil in heavily compacted areas and scatter needles, twigs, branches, over the area.
- Rehabilitate newly established trails on slopes <6%, water bar trails created on steeper slopes.
- Scatter cut material and camouflage cut surfaces with dirt.
- Do not use non-native materials, avoid introducing invasive species.

● No unnecessary stopping within these areas. Limit traffic to emergency operations only.
