**\*\*\* Red Flag Warning Today for Dry and Very Unstable Conditions \*\*\***

**WEATHER DISCUSSION:** Expect a combination of hot temperatures and increasing instability will result in the mid-level inversion cap fully lifting late this afternoon. When that happens, expect full ventilation of the fire area. Transport winds will be fairly light but should favor pushing brands toward the east and southeast. Expect gusty afternoon upriver (NNW) winds for the Jones Point fire. These winds will be strong enough to bring cross slope fire spread in most cases. Smoke from the Jones fire may hamper Willow Creek air operations while the Weaverville Helibase may deal with thunderstorms in their area. Low pressure will bring a modest cooling trend for Tuesday through Thursday.

**Today (0600-1800):**

**Weather:** Sunny and hot. Very Unstable. At Weaverville Helibase, a 20% chance of a thunderstorm after 1500 hrs.

**High Temperatures:** Red Fire: 86-95°; Salmon Fire: 84-88°; Jones Point Fire: 101-104°.

**Humidity:** Red Fire 22-29%; Salmon 28-32%; near 1300 hrs, then slowly rising through 1800 hrs.  
Jones Point Fire: 16-20% near 1600 hrs, then slowly rising through 1800 hrs.

**20 Foot Winds:**

**Lower/Mid Slopes:** Variable 0-3 mph until 1000, then terrain driven 4-8 mph.

**Upper Slopes:** Northeast 4-7 mph until 1200, becoming West then Northwest 5-8 mph with gusts up to 15 mph.

**Jones Point Fire:** Variable 0-3 mph until 1300 hrs then up river (NNW) 8-12 mph with gusts around 20 mph.

**Stability:** Low valley inversions lift around 1200 hrs. Mid-level inversion will break near 1600 hrs.

**Afternoon Mixing Height:** Valleys: 6,000 feet AGL. Ridges: 10,000 feet AGL.

**Tonight (1800-0600):**

**Weather:** Clear. Smoke settling in area drainages.

**Low Temperatures:** Red Fire: 62-65°; Salmon Fire: 64-70° Jones Point Fire: 59-62°.

**Humidity:** Red Fire: Peaking at 35-40% from 1900 hrs to 0300 hrs, then falling to 30-35% by 0600 hrs.

Salmon Fire: Peaking at 38-43% from 1900 hrs to 0300 hrs, then falling to 27-32% by 0600 hrs.

Jones Point: Steadily increasing and peaking 85-90% by 0600 hrs.

**20 Foot Winds:**

**Lower/Mid Slopes:** Variable 3-5 mph until 2300 hrs, then drainage 4-6 mph.

**Ridges:** Northwest 5-8 mph with gusts to 15 mph until 2200 hrs, then Northeast 5-8 mph.

**Jones Point:** up river (NNW) 8-12 mph with gusts around 20 mph until 2000 hrs, then drainage 0-4 mph.

**Inversion:** Strong inversion/thermal belt centered around 4,500 ft MSL. Weak inversion around 1,300 feet.

**Tuesday:** A little cooler. Areas of smoke. Max Temps: 80-89°. Afternoon RH: Red Fire 23-28%, Salmon Fire 27-25%. Afternoon Winds - Lower Slopes: Variable/Terrain Driven. Upper slopes: West-Northwest 5-8 mph.

**Wednesday and Thursday Outlook:** Cooler yet at 78-85°. Afternoon humidity 30-35%. Continued moderate humidity recovery. Conditions becoming more stable with mixing heights falling to 6,000 feet Wednesday and 5,000 feet on Thursday.

#### WEATHER SUMMARY:

DISCUSSION... Expect a combination of hot temperatures and increasing instability will result in the mid-level inversion cap fully lifting late this afternoon. When that happens, expect full ventilation of the fire area. Transport winds will be fairly light but should favor pushing brands toward the east and southeast. Expect gusty afternoon upriver (NNW) winds for the Jones Point fire. These winds will be strong enough to bring cross slope fire spread in most cases. Low pressure will bring a modest cooling trend for Tuesday through Thursday.

\*See Spot Weather Forecast for details\*

### FIRE BEHAVIOR

#### GENERAL

Fire activity will continue to increase today with dry fuels and a weak mid-level inversion. Heat generated from the fire or from burn out operations has potential to break the inversion layer leading to an increase fire activity. Rapid rates of spread with torching, crowning and long-distance spotting should be expected if a convection column develops. Otherwise expect to see surface fire spread with upslope runs when in alignment with slope.

Spotting distance: up to .3 of a mile.

Probability of ignition: Near 90%.

Predicted ERC: 83rd percentile    Timber ROS: 7-12 ch/hr.    Timber FL: 6-10 feet  
Predicted BI: 99th percentile    Brush ROS: 1-3 ch/hr.    Brush FL: 1-4 feet

#### SPECIFIC

##### SPECIFIC FIRE BEHAVIOR:

**Branch I (Red):** When the inversion breaks, the fire will actively burn today with surface fire spread, single and group torching, running and spotting on all flanks.

**Branch V (Salmon):** Heavy fuels continue to consume along with interior pockets. Spotting potential from these fuels remains high. Otherwise spread should be limited to creeping and smoldering.

**Branch VI (Jones Point):** The fire is burning in a timber litter fuel type on steep slopes. Fire behavior will be limited to creeping and smoldering as heavy fuels burn out along the line and interior pockets consume.

**Branch VII (Packsaddle Ridge):** Divisions U/W should expect uphill runs from the fire in Red Cap drainage. Torching, long range spotting and short crown runs will occur as the fire moves up the steep slopes towards Packsaddle ridge.

#### AIR OPERATIONS

Low level inversion lifts around 1000 hrs. Smoke will impact aviation on all Branches.

#### SAFETY

Weather is getting hotter and drier and fire behavior is increasing so base all actions on current and expected fire behavior.

## **HUMAN RESOURCE MESSAGE**

### **HASTE MAKES WASTE**

Haste makes waste is a phrase meaning rushing the task you're engaged in often results in mistakes that can be very costly. The phrase expresses the ideology that making rash decisions makes an individual or organization to actually fall behind compared to those who took their time to think through an issue before acting.

This rhyming warning, first recorded in this exact form in 1575, was in John Ray's 1678 proverb collection, where the full text was: "Haste makes waste, and waste makes want, and want makes strife between the good man and his wife.

Whether your, teammate, spouse, friend, yourself, or whomever, strife is what we want to avoid. So (here's a tip), along with employing situational awareness, be cautious, patient and deliberate in your actions to avoid any unnecessary setbacks that are not part of the plan.

Be safe ~ Have a great shift.

Feel free to call/text or come by the HRSP yurt if you have questions, concerns, or just want to chat. ~ HRSP: Adam Alvarez – (707) 373-8715

## MINIMUM IMPACT SUPPRESSION TECHNIQUES (MIST)

Fire Management Tool Box on Wilderness.Net

### FIRELINE CONSTRUCTION

- Take advantage of natural barriers wherever possible.
- Use cold-trail and/or wet line when appropriate.
- If the decision is made to construct line, use only the width and depth necessary for halting the fire spread. Minimize ground disturbance.
- Minimize bucking and cutting of trees to establish fire line; build line around logs when feasible and effective.
- Limb vegetation only to the extent necessary to stop fire spread.
- Avoid cutting live trees whenever possible.
- As an alternative to felling, consider allowing ignited trees and snags to burn themselves out. Ensure adequate safety measures are communicated to those affected by this decision.
- If burning trees or snags pose a serious threat of spreading firebrands, extinguish the fire with water and/or dirt wherever possible.

### AIR OPERATIONS

- Limit retardant or foam use, use water instead. If retardant and foam is appropriate, avoid drops near water.

### HELISPOTS

- Minimize the number of helispots in wilderness. Use alternate sites outside wilderness when possible or consider using pack strings (mules).
- Use natural openings as much as possible.
- Size the helispots for the appropriate size helicopter. Consider long line remote hook operations instead of helispots for logistical support.

### SPIKE CAMPS

- Minimize the use of spike camps in wilderness. If spike camps are needed, use existing camp sites where available.
- Avoid camping in wet meadows, along streams or on lake shores. Resource Advisors can help identify suitable sites.
- Layout camp carefully from the start, identify areas for cooking, sleeping, washing, latrines and water supplies.
- In small camps individuals can use "cat hole" method

Firefighter and public safety is always the first priority in any suppression action, including operations in wilderness. Use of MIST provides guidelines for preserving wilderness areas for present and future generations.

When evaluating fire management actions, the potential degradation of wilderness character should be considered before, and given significantly more weight than, economic efficiency and convenience. Unless human life or private property is immediately threatened, only those actions that preserve wilderness character and/or have localized, short-term adverse impacts to wilderness character should be implemented.

of disposal (6"-8" hole) short term. In larger camps locate community latrines 300' from water.

- Designate wash areas away from streams, and provide for gray water disposal. Do not use soap, shampoo, or other chemicals near waterways.
- Store food away from camp and so that it is not accessible to wildlife.
- Store garbage so that it is not accessible to wildlife, and remove it as frequently as possible.
- Use stoves to cook when possible. Minimize the use of campfires, and use either a pit or mound ring fire with dead or downed small diameter firewood. Do not build rock ring campfires. An old fire shelter placed under the coals helps protect the soil.
- Limit travel ways within, to, and from camp.

### PERSONAL SPIKE CAMP CONDUCT

- Select durable sites for tents.
- Do not clear vegetation or dig trenches to create bedding sites.
- Pack out all garbage, including candy wrappers, cigarette butts, and flagging.
- Carry water and bathe away from lakes and streams.
- Do not use nails in trees or limb trees for bedding.
- Evaluate the short and long term impacts of your decisions.

### REPAIR

- Remove signs, flagging, garbage, and equipment used during fire suppression.
- Restore disturbed areas.
- Scarify the top 2-4" of soil in heavily compacted areas and scatter needles, twigs, branches, over the area.
- Rehabilitate newly established trails on slopes <6%, water bar trails created on steeper slopes.
- Scatter cut material and camouflage cut surfaces with dirt.
- Do not use non-native materials, avoid introducing invasive species.
