3. Objective(s):			
Management Objectives			

- Follow identified standard procedures to minimize the spread of Covid-19 to all functions of the incident.
- Utilize nationally recognized risk management processes to minimize threats to the public and emergency responders. Use risk-based decision making and MIST tactics to protect and defend cultural values and natural resources.
- decisions and actions can be implemented. Foster and maintain positive relationships with all stakeholders and the public by sharing critical information so timely
- Provide initial attack within the TFR.
- Manage incident costs effectively for the values at risk through regular and ongoing cost analysis.

Control Objectives

Provide initial attack within the TFR and control the fire on Prospect Peak

Keep Red and Salmon Fires:

- East of Packsaddle Ridge West of the High Point Ridge North of the Soldier Creek Trail
- South of Nordheimer Creek to Salmon Summit Trail to Red Cap Creek

FIRE BEHAVIOR

behavior will diminish at sunset or heavy shading along with an increase in humidity. especially where open line exist. Uphill runs and spotting will be an issue where slope and wind align. Fire and critically low fuel moistures. By mid-day, expect to see activity pick up with active to highly active fire behavior. Once the inversion lifts (approx.1500) anticipate and increase in fire behavior over the incident Expect a moderate risk burn environment (potential for large fire growth) due to high temperatures, low RH

SPECIFIC

SPECIFIC FIRE BEHAVIOR:

Division A: Low activity consisting of creeping and smoldering

spotting will potentially threaten DIV Delta around Whiteys Peak and Red Spike in DIV Alpha. movement to the northwest into China Creek and to the northeast as the drainages align. Uphill runs and Prospect spot (interior): Will continue to move with active to very active fire behavior. Expect to see

a spot from Salmon Mtn. will cause an increase in fire activity (upslope runs, spotting). **Division D, K:** No fire activity in DIV Delta. There is potential due to the activity in China Creek (Prospect spot). Firing operations will be aided with forecasted SW winds. No fire activity in DIV Kilo but

Division M / N: Minimal fire behavior is expected

significant spotting potential. slope to align and make upslope runs. Highly active to extreme fire behavior could be produced with Division O: Fire will continue to move south on the eastern side of the drainage. Watch for fire mid-

and uphill runs. Very active to extreme fire behavior from upslope runs. Division U: The main fire continues to move south across the slopes. Watch for mid slope alignment

Division W, Y: low activity mostly creeping and smoldering.

AIR OPERATIONS Night Division: As the humidity increases and sun sets expect to see fire activity drop off to smoldering

Low level inversions will lift at approx. 1200, mid-level at approx. 1500

6. Control Operations/Work Assignments:

Mop-up and hold from DIV A / Y break along Red Cap Creek to Black Mountain. Utilize UAS as needed

7. Special Instructions:

Coordinate with REAFs on all dozer operations to minimize impacts to cultural sites. Limit dozer operations to pre-existing dozer lines and limit dozer width to the extent possible. Utilize MIST tactics. Utilize READ's for cultural and environmental resource concerns.

Do not post lookouts on any bed rock out cropping without first getting clearance from REAF or READ. **ARCHs / REAFs** Check in / out with DIVS when entering and leaving divisions.

ID helispots and drop points, get lat-longs and provide to the DIVS.

Back-haul trash and excess equipment i.e. nets, swivels and ice chests to logistics

FOBS assigned to SIT will be working in Branch I: T. Easly/ A. Miyagishima / M. Snyder / J. Hurd

Operational Period: 0600-0600	 Utilize social distancing, wear facemasks in camp ALWAYS. Maintain the "module of one" concept. Disinfect vehicles, tools, and commonly touch surfaces frequently. Do not share equipment and wash hands frequently. 	 Keep alert for wildlife, deer, rattlesnakes, bees, and plants. Watch footing and hand placement around rocks. Use caution around gas and power lines. Personal hygiene is #1 when it comes to Poison Oak Prevention. Pick up and remove all trash from fireline, return to camp and place in dumpsters. 	 Follow "Aviation Watch-Out Situations" on page 46, IRPG. Don't plan on air resources for tactical support or medical transportation. Refer to page 58, IRPG for directing bucket drops. Ensure positive communication with all air resources. 	 Have a purpose for where you drive and what you do. Don't rush into assignments. Use caution where you park or stage, especially in steep timbered areas. Use available time for briefings on roads, terrain, and potential rolling material, especially if the resources are new to the area. Increase SA by trying to see the work area during daylight hours. Use glow sticks to mark hazards, and ensure personnel have headlamps. 	 Share your Situational Awareness (hazards, changes, etc) to those who also have a need. Radio communications may be poor in some areas. Ensure all personnel are familiar with the incident communications plan. 	 Follow the chain of command when undertaking burning operations. Ensure that aerial/ground ignition plans have been well briefed including LCES and drought related fire behavior considerations. Wear and use appropriate PPE. Initiate burning after ensuring the plan is authorized and understood by all. 	 Be alert for signs of fatigue and take breaks as necessary. Maintain 2:1 work/rest ratio. Monitor ALL resources for level of fatigue. Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. Take steps to maintain situational awareness for the duration of the incident. 	 Keep good Situational Awareness while engaged in indirect line construction. Post lookouts. Make sure to stay in contact with someone who can see the main fire Ensure all personnel are familiar with the plan. Make sure all personnel know their escape routes and safety zones. Remember there is "unburned fuel between you and the main fire." 	 Maintain 8'-10' spacing when working & walking. Be alert for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access. Post lookouts where feasible. 	 Follow Hazard Tree Safety Guidelines (IRPG p.22.) Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled. Be alert around hazard trees during wind events, even green trees. The hazard zone extends a minimum of 2½ tree lengths. Do not park vehicles or take breaks under or near hazard trees. 	 Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicles to pass on uphill side. Use spotters when backing, or turning around. Practice "Defensive Driving" techniques. Assume other drivers are fatigued and complacent. 5mph speed limit in and around ICP, keep your speed down in all areas. Use warning lights when working on roads or traveling in smoke. Drive at or below posted speed limits. Be alert for wildlife. 	MITIGATIONS / WARNINGS / REMEDIES
