### OUTPUTS

### FIRE BEHAVIOR

### GENERAL:

and the low 1000 hour fuel moistures. Spots will be more frequent and harder to control. Drying conditions will be favorable for burnout. Spotting will be a problem today with the higher PIG

east and west or northeast and southwest. Fire behavior continues to be active after sunset with the lower humidity. The lack of solar radiation at night will help keep the PIG down decreasing spotting Strikes will be efficient in producing new fires so IA may be on the plate for the day. Stay aware of any new starts and how they will impact your work area. Watch for alignment in the drainages that are Thunderstorms in the area can produce strong erratic winds and of course new starts from lightning.

### SPECIFIC:

Division A, Y and W: Smoldering with some interior creeping in unburned fuels.

behavior. Expect to see activity through the night. towards the containment line. Active to very active fire behavior can be expected with upslope runs. The moderate to low fire behavior. The head will continue to move northeast across Nordheimer Creek upslope Prospect Peak area: Continual northwest movement upslope of China Creek in the timber stringers with east flank will continue to back down to Nordheimer Creek with rollouts and moderate to active fire

blowing embers back into the black. Division K, H: The burnout operation will continue to see active fire behavior with backing and short upslope runs. Winds and the high PIG will make spotting a problem. Night burning winds will be favorable

Division M and N: Smoldering.

extreme fire behavior could be produced. Division O: Fire will continue to move south on the eastern side of the drainage. The southward movement has been about 100 chains a day. Watch for fire mid-slope to align and make upslope runs. Very active to

uphill runs. Very active to extreme fire behavior from upslope runs. Division U: The main fire continues to move south across the slopes. Watch for mid slope alignment and

with spot ignitions and narrow strip ignitions burning techniques will dictate the fire behavior tonight. Moderate to active fire behavior can be achieved Night Division: Recovery will be poor tonight so expect to see active to very active fire behavior. Your

It ends when your back at and the condition of crews enroute to a fire. Size-Up; when does it start and when does it end? You can size up the weather, fuels, topography Once on the incident, size-up should be occurring

## COVID-19 INCIDENT STATISTICS (to date)

Symptomatic Personnel: 11 Positive # of Cases: 0

### Safety is No Accident!

- Situational Awareness: gathering information about your surroundings.
- Hazard Assessment: identify the tactical hazard.
- Hazard Control: develop mitigations to reduce or eliminate risk.
- Decision Point: are mitigations in place and timely?
- Evaluate: What is changing? Are strategy and tactics working? Is fatigue becoming a bigger factor?

## **End of Assignment Watch-Outs**

- Not mentally engaged in the task at hand
- Your driver is driving faster than when you got here
- Not giving good, thorough briefings
- Your hardhat and web gear are still on the truck
- Assuming all is good because you worked this piece of ground yesterday
- All the conversations are around what you're going to do when you get home
- You and your folks are tripping and stumbling more than usual
- It's taking you longer to get out of camp
- No AAR after each shift

Keep alert for wildlife, deer, rattlesnakes, bees, and plants. Watch footing and hand Ensure positive communication with all air resources Refer to page 58, IRPG for directing bucket drops. Don't plan on air resources for tactical support or medical transportation Increase SA by trying to see the work area during daylight hours especially if the resources are new to the area. Follow "Aviation Watch-Out Situations" on page 46, IRPG. Use glow sticks to mark hazards, and ensure personnel have headlamps Use available time for briefings on roads, terrain, and potential rolling material. Use caution where you park or stage, especially in steep timbered areas Have a purpose for where you drive and what you do. Don't rush into Ensure all personnel are familiar with the incident communications plan. Use human repeaters as needed Operational Period: 0600-0600 Wear and use appropriate PPE drought related fire behavior considerations. Ensure that aerial/ground ignition plans have been well briefed including LCES and Take steps to maintain situational awareness for the duration of the incident. Repeated assignments in the same area can lead to complacency making Follow the chain of command when undertaking burning operations Monitor ALL resources for level of fatigue. Maintain 2:1 work/rest ratio. Be alert for signs of fatigue and take breaks as necessary Make sure all personnel know their escape routes and safety zones.
