INCIDENT Weather Forecast

FORECAST NO: 5 **NAME OF FIRE:** Saddle Fire
PREDICTION FOR: Monday Day **SHIFT** **UNIT:** SHF
SHIFT DATE: June 15, 2015 **SIGNED:** Mike Smith

TIME AND DATE **Incident Meteorologist**
FORECAST ISSUED: 2200 June 14, 2015

WEATHER DISCUSSION

A small scale system will move onshore to the north today keeping the upper flow onshore and allowing for a little more cooling and slightly higher RH during the day. Scattered clouds will be possible in the afternoon but no showers are expected near the fire area. Some ridgetops may see a slight increase in winds but slope winds will continue to be terrain generated. Northern California will remain under relatively stable west flow aloft through most of the coming week between high pressure over the Great Basin and a trough offshore. Therefore, the more moderate fire weather conditions will continue as well.

WEATHER FORECAST:

WEATHER: Fair skies except for smoke in the canyons through the late morning and early afternoon hours.

TEMPERATURES: Maximum temperatures 87-92.

HUMIDITY: Minimum humidity 18 to 23%

20 FT WINDS:

RIDGETOP - Light and variable in the morning becoming northwest to north 2-5 mph after about 1000 with gusts to 12 mph in the late afternoon.

SLOPE/VALLEY - Downslope to downcanyon to 3 mph through about 0900 becoming upslope to upcanyon 2-5 mph. Some gusts up to 12 mph up the south fork Trinity river in the late afternoon.

STABILITY/INVERSION: Inversions in the morning beginning to break out around 1000 then clearing by early afternoon.

FORECAST FOR Monday Night: Fair skies except smoky conditions developing in the valleys. Minimum temperatures 53 to 57. Maximum Humidity recovery 72-82%. Ridge winds northwest to north 2-5 mph becoming light after sunset. Slope winds shifting to downslope/downcanyon after sunset 0-3 mph with occasional gusts to 5 mph.

Outlook for Tuesday: Fair skies except smoky conditions night and morning hours. Daytime highs 86-93. Daytime minimum RH 19-25%. Light ridge winds in the morning becoming west to northwest on the ridges 2 to 5 mph with gusts to 10 mph in the late afternoon. Slope wind mainly light downslope in the morning becoming upslope to upcanyon 2 to 5 mph by late morning. Some gusts up to 10 mph up the south fork Trinity river in the late afternoon.

EXTRA INFORMATION: Underwood Raws (2mi NE of fire) at 1624 Sun. Temperature 89 RH 16%
 Wind northeast 4 gust 13 mph.

Sunrise 5:42 Sunset 8:47

INPUTS

WEATHER SUMMARY: ***See attached Incident Weather Forecast***

Discussion:

A small scale system will push to the north today continuing the slight cooling trend. Scattered clouds are possible in the afternoon but no showers are expected near the fire area. Northern California will remain under relatively stable west flow aloft through most of the coming week.

Weather: Fair skies with smoke settling into the valleys after sunset.

Max Temp: 87 - 92°

Min RH: 18 - 23%

Winds: Eye level: Light downslope in the morning becoming upslope/upcanyon to 5 mph by late morning.
Ridge: West to northwest to 5 mph with gusts to 12 in the afternoon.

FIRE BEHAVIOR

GENERAL: ERC of 58 in Hayfork is above average and approaching the historic high for this time of year.

Persistent hot and dry conditions coupled with diurnal upslope/upcanyon winds have the potential to create very high fire behavior including sustained brush crownfire runs, isolated torching and spotting up to ½ mile with a probability of ignition 75-85%. Live and dead fuels are about a month ahead of schedule, very dry and available to burn. The fire is burning in hardwood and conifer leaf litter, brush and heavy ground fuel and snags from a 10 year old wildfire. Live brush fuel moisture is about 125% and 1000 hr fuels are around 10%. Fire behavior will increase significantly after the inversion lifts by late-morning. Expect maximum flame lengths of 6-8' and max rates of spread 30-40 ch/hr when wind, slope and aspect come into alignment. Backing rates of spread could reach 5 ch/hr with 2-3' flame lengths.

SPECIFIC FIRE BEHAVIOR:

Division A: Unburned island in Saddle Gulch could flare up and loft embers south towards the 4N15 road. Rollout can occur in steeper areas near the DP90 knob.

Divisions C/M: Areas with indirect fireline could flare up during the heat of the day with upslope/upcanyon winds. Isolated flareups in jackpots of heavy fuel near the line could loft embers south into Monroe Creek.

Division S: Watch for short duration runs and flareups in heavier fuels which could continue to push fire toward Lake Mountain Ridge. It is unlikely that spots or slops will occur across the ridge in to Six Rivers Forest due to battling diurnal ridge winds.

Division Z: Pay attention to any areas with indirect fireline which could heat up and challenge roads, dozer and handline.

AIR OPERATIONS

Air operations may be limited in the morning due to poor visibility from the smoke inversion.

Sunrise: 05:42

Sunset: 20:47

SAFETY

- Mop up should be more extensive in areas that could generate wind blown embers across the line.
- **Consider the thresholds that trigger sustained crownfire in brush:** Time of day, fuel moisture, windspeed, dead component, RH, slope, aspect etc.

Lookouts Communications Escape Routes Safety Zones	Incident Saddle Operation Period: 06/15/2015 Day Shift
	Emphasis on Anticipating Problems

Ask yourself “What Can Go Wrong”

- Identify the critical elements of your plan, and ask “what if” a loss of one of these elements occurs
- Develop a plan to deal with the problem before it occurs
- Communicate the plan to all of your personnel
- Validate the new plan to ensure it matches the current situation

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE ASH PITS	ROLLING MATERIAL RATTLESNAKES DEHYDRATION	HEAVY EQUIPMENT SNAGS MARIJUANA GROWS
--------------------------------------	---	---

Be sure all elements of your safety plan are in place prior to engagement

Briefing Protocol

Brief your personnel using the IRPG checklist prior to engagement

Re-brief anytime your plan changes, unexpected changes compromise the plan or your safety, or anytime essential information becomes known and needs to be communicated

Ask questions to be sure essential content is understood

Common Tactical Hazards

Building fireline downhill

Building underslung or mid-slope fireline

Building indirect fireline, or unburned fuel remains between you and the fire

Attempting a frontal assault on the fire

Depending on uphill escape routes
