SAFETY MESSAGE

Fork Complex

August 28, 2015

USE **L**OOKOUTS, **C**OMMUNICATIONS, **E**SCAPE ROUTES, **S**AFETY ZONES
WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS

Brief your crews on all components of the IAP

Suppression Repair There are 4 dozers, 4 excavators, 1 masticators, 2 skidders and 15 water tenders involved in suppression repair and roads at this time. Barker is done with suppression repair, Blue is close. That's a lot of iron to keep separate from our firefighters, please keep adequate distance between repair and suppression. Working around excavators, masticators, dozers is similar to working around helicopters. Never approach from the rear, always make eye contact with operator before approaching. Masticators can throw debris long distances; stay at least 200 feet away.

Snag Watch Out Situations

- Snags are falling or have fallen in work area.
- The area is occupied by trees that are susceptible to rot, especially white fir and old oak trees.
- Working or taking a break in a hazard area.
- Working in a hazard tree area for more than a few minutes.
- Working in hazard tree area during windy or potentially windy situations.
- Working in an area with trees that have been burning for an extended period.
- Tailgate safety session did not include discussion of snags.
- Lookouts are not posted or do not have communications in a hazard tree area.
- Becoming complacent in a hazard tree area.
- Too many snags for posted lookouts to keep track of.
- Tree within fire will fall over control line.
- Parking in hazard tree area.
- Working around heavy equipment or tree felling operation in a hazard tree area.
- Unable to see top of trees.
- Steep slope with hazard trees above you.
- Nighttime work in area not scouted in daylight.

Strengthening snag/hazard tree awareness for all firefighters. Emphasize snag/hazard tree hazards at all briefings and tailgate sessions before crews are committed. Flag known hazards and identify to all crewmembers. Large Oaks tend to have significant heart rot; care should be taken when falling.

Appendix A

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1-5	200
6-20	125
21-40	60
41-60	40
>60	25

Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.
