OUTPUTS

FIRE BEHAVIOR

GENERAL:

Day: Partly cloudy and gusty southerly ridgetop winds today will favorable for holding fire within containment lines. Unburned islands in alignment with the winds could become active within the fire perimeter. Remaining unburned islands with heat sources would be more prevalent on the southern portion of the fire. With instability capping out at 6000', large fire growth is not probable. Fire behavior is expected to be minimal over the fire area, however single and group tree torching could be possible in areas of available fuels with a heat source. In the event of a spotfire over containment lines when slope, wind and fuels come into alignment; torching, group torching, and active crown fire could be possible. Maximum spotting distance ½ mile. ROS 0-10 ch/hr.

Probability of Ignition: 80% unshaded: 70% shaded

Night: Relative humidity recovery will be favorable tonight. Ridgetop winds from the south will be favorable for holding fire within containment lines. Minimal fire behavior can be expected. ROS 0-1/2 ch/hr

Probability of Ignition: 10% higher elevations 20% lower elevations

Combinations of any of these factors can greatly increase fire behavior:

20' winds over 5 mph, **RH** less than 20%, **Temp** over 73°, **ERC** above 62, **10HR** less than 5

SPECIFIC:

Day:

Division I: Areas of available fuels will continue to burn out. Minimal fire behavior anticipated.

Division M/N: Areas with available fuels and a heat source will continue to burn out. Minimal fire behavior is anticipated.

Division Q: Minimal fire behavior is anticipated.

Division T: Minimal fire behavior is anticipated.

Night: Minimal fire behavior expected in all Divisions.

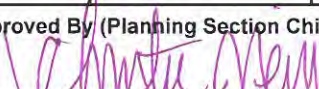

AIR OPERATIONS:

Forecasted clear skies should be favorable for air operations today.

SAFETY

Gusty ridgetop winds could cause fire weakened trees and snags to drop. Scout out work areas thoroughly prior to engagement.

SAFETY MESSAGE

INCIDENT: Fork Complex

DATE: AUGUST 25-26, 2015—Day Night

Major Hazards and Risks:

Mop-Up Operations

Balance the risk of exposure to hazards against the mop up objective potentially achieved.

Evaluate areas for hazard trees and locate stump holes for avoidance.

Monitor fatigue; take breaks to increase rest where appropriate.

Follow "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4).

Demob If you're heading home, remember work rest guidelines, no more than 10 hours driving for one person or 16 hours max for two drivers. Coming off two weeks on the fire everybody is really tired. Stop and rest as needed.

Hazards—along with bees, snakes, snags, poison oak, steep/rugged terrain and dehydration concerns you can add bears and mountain lions. Don't leave food in or around the line, it can attract bears into your area. Lots of bears in the area, loud noises scare them away. If you should encounter a lion do not turn and run. Give the lion a way to escape, talk calmly and firmly. Try to appear larger by raising your arms or your hand tool over your head. If attacked, protect your head and neck with hands and arms.

Snags/hazardous limbs/burned green trees— winds associated the frontal passages can bring down more snags and trees that have been fire weakened, just when you thought it was safe here comes gusty winds and trees come down.

Human Resources Message

There are probably many reasons you are here to include the experience, the money, but another reason that may get lost in the day-to-day routine is the preservation of the state of California.

- The SHF is the largest NF in CA.
- Klamath Basin National Wildlife Refuge contains the largest winter population of bald eagles in the U.S.
- Inyo National Forest is home to the bristle cone pine, the oldest living species.
