INCIDENT OBJECTIVES	1. Incident Name	2. Date Prepared	3. Time Prepared
	ICS 202	Fork Complex	08/22/2015 1000

4. Operational Period
August 22nd-23rd, 2015 **NIGHT OPERATIONAL PERIOD 1800-0600**

5. General Control Objectives for the Incident (include alternatives)

Leaders Intent

Task:

- Contain the Fork Complex of fires where the probability of success is the highest, utilizing the planned and contingency firelines.
- Minimize impacts to natural and cultural resources by utilizing resource advisors and MIST tactics in the wilderness.
- Provide for the defense of communities, infrastructure and other economic interests.
- Initiate suppression repair actions and communicate incident information.

Purpose:

- To protect and minimize fire effects to private inholdings, communities, infrastructure and natural resources commensurate with values at risk.

END State:

- Everyone goes HOME – while achieving the goals of the Shasta-Trinity National Forest and Shasta Trinity Unit.

6. General Weather

Ridging will build over the Pacific Northwest and northern California. Light southerly flow aloft will occur as the upper level ridge extends itself from the western Rockies to the Great Basin and settles in for the foreseeable future.

7. General Safety Message

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries.

Fork Complex Fire Weather Forecast

FORECAST NO: 40
PREDICTION FOR: Friday Night Shift
SHIFT DATE: Aug 22-23, 2015
TIME AND DATE
FORECAST ISSUED: Aug 22, 2015 @ 10:00 PDT

NAME OF FIRE: Fork Complex
UNIT: Shasta-Trinity National Forest
SIGNED: John Franks
Incident Meteorologist

WEATHER DISCUSSION: ...RIDGING BUILDING IN...

Ridging will build over the Pacific Northwest and northern California. Light southerly flow aloft will occur as the upper level ridge extends itself from the western Rockies to the Great Basin and settles in for the foreseeable future.

Outlook for Saturday Night: ...DECENT HUMIDITY RECOVERIES...

Weather: Clear. Smokey in valley bottoms.
Low Temperature... 62° above 4000 feet..... 48° valley bottom
Max RH..... 40-50% above 4000 feet..... 85% valley bottom
20-FOOT WINDS:
Ridgetop..... Northwest 2-4 mph becoming east at 6-8 mph after 22:00.
Slope/Valley..... Downslope/downcanyon 4-6 mph.

Outlook for Sunday: ...SOUTHERLY RIDGE WINDS...

Weather: Mostly sunny. Areas of smoke.
High Temperature... 83-93°F if clear..... 73-83 if smokey.
Min RH..... 19-24% if clear..... 25-35% if smokey.
20-FOOT WINDS:
Ridgetop..... Southeast 4-8 mph becoming variable at 1-2 mph
Slope/Valley..... Upslope/upcanyon 5-8 mph.

Outlook for Sunday Night: ...DECENT HUMIDITY RECOVERIES...

Weather: Clear. Smokey in valley bottoms.
Low Temperature... 63° above 4000 feet..... 49° valley bottom
Max RH..... 40-50% above 4000 feet..... 85% valley bottom
20-FOOT WINDS:
Ridgetop..... Northwest 3-6 mph becoming east-southeast at 5-7 mph after 23:00.
Slope/Valley..... Downslope/downcanyon 4-6 mph.

Outlook for Monday: ...CONTINUED RIDGING...

Weather: Mostly sunny. Areas of smoke.
High Temperature... 82-92°F if clear..... 75-85 if smokey.
Min RH..... 20-25% if clear..... 25-35% if smokey.
20-FOOT WINDS:
Ridgetop..... Southeast 3-7 mph turning south.
Slope/Valley..... Upslope/upcanyon 4-7 mph.

EXTENDED OUTLOOK for Tuesday through Thursday:

With the ridging continuing over the Rockies and Great Basin next week, southwesterly flow will increase aloft over northern California. Disturbances are expected to push into the ridge at times next week, but will primarily affect the CA/OR coastal region and not make more than a slight increase of winds on the interior where this fire is located.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 040	TYPE OF FIRE: Wildland
FIRE NAME: Fork Complex	OPERATIONAL PERIOD: Night Shift Saturday 8/22/2015
DATE ISSUED: 08/22/2015	TIME ISSUED: 1200
UNIT: CA-SHF-002067	SIGNED: Shane McGowan FBAN(08/22/15)

INPUTS

WEATHER SUMMARY:

20' winds: Ridgetop: Northwest 2-4 mph becoming east southeast 6-8 mph after 22:00.

Slope/Valley: Downslope/Downcanyon 4-6 mph. **Min Temps:** 62° above 4000' 48° Valley bottom

Max RH: 40-50% above 4000' 85% valley bottom.

Favorable humidity recovery tonight continues to keep the probability of ignition from spotting low.

(See attached weather forecast)

OUTPUTS

FIRE BEHAVIOR

GENERAL:

LOCAL THRESHOLDS – WATCH OUT

Combinations of any of these factors can greatly increase fire behavior:

E 20' winds over 3 mph **RH** 21% or less **Temp** over 73° **ERC** above 62 **10HR** 5 or less

Expect clear skies on slopes above 3000' throughout the shift tonight. Active fire behavior is not anticipated over most of the fire, however on slopes with available fuels in alignment with forecasted winds there could be islands of fuel within the interior to burn out under clear skies. Temperatures, humidity, and probability of ignition should be similar to last night. Initially at the beginning of the shift, ridgetop winds will be northwest. After 2200 hours the northwest wind will begin moving clockwise towards the east-southeast. Fire behavior in the valleys under the smoke will be minimal due to lower temperatures and higher humidity. As the humidity rises to the forecasted 40-50% any residual fire behavior such as interior islands consuming should decrease.

Worst case **ROS: 0-10 ch/hr.** Higher ROS most likely in the **daytime hours.** **Nighttime worst case ROS: 0-1.5 ch/hr.**

SPECIFIC:

Blue Fire and Barker Fires: Anticipate Minimum fire activity.

DIV O/P: Anticipate minimal fire activity.

DIV N/M: IR indicated only scattered heat in the slopover area. This area should be sheltered from the ridgetop winds. Minimal fire behavior is anticipated.

DIV Q: IR indicated only scattered heat to the northwest of DP 212. This area should be sheltered from the ridgetop winds. Minimal fire behavior is anticipated.

DIV I/R: Downslope/downcanyon winds could allow for active burning in islands of fuels within the interior. IR indicated intense heat within the interior, but only scattered heat along containment lines allowing for minimal fire behavior along containment lines.

Probability of Ignition under clear skies and ridgetops: 30%

Probability of Ignition under smoke and lower elevations: 10%

AIR OPERATIONS:

Smoke over the incident and in Redding will dictate availability of aircraft early in the shift.

SAFETY Be aware of areas of smoke when driving. Visibility can be greatly reduced.

SAFETY MESSAGE

Fork Complex

August 22-23, 2015 Night Shift

Ash Pit Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Environmental factors that increase the risk of ash pit formation after a wildfire:

- Low soil moisture from drought conditions
- Deep duff layers
- Landscapes that have once been cultivated or manipulated by heavy equipment
- White ash is sometimes an indicator of ash pits as are swarms of hovering insects
- Ash pits often give off the smell of incomplete combustion or of creosote burning

Deer:

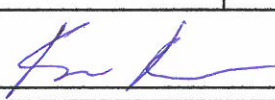

There have been a lot of deer sightings around the fire. Deer are most active during the dawn and dusk hours. Remember when you see a deer along the side of the road, expect the unexpected; you never know which direction they are going to jump. Slow down when you see any type of wildlife on the side of the road.

Driving:

Driving is the most hazardous thing we do on a daily basis. Spend the extra minute and make sure to do a walk around before you enter the driver's seat. On these narrow dirt roads, keep speeds down, because you never know when that other vehicle is coming down the road.

WE NEED EVERYONE TO SLOW DOWN!

Prepared by: Jennifer Boyd Safety Officer Date: 8/22/2015
Jason Winbigler SOF2(t)
