SIGNED: Andy Haner *AH*
Incident Meteorologist

TIME AND DATE

FORECAST ISSUED: Aug 7, 2015 @ 1930 PDT

EXTENDED OUTLOOK for Monday through Wednesday:

An upper level low will gradually sag south along the Oregon coast and should be located just off the far northern California coast around Wednesday of next week. This progression will support the further intrusion of cooler and more humid marine air up the Trinity and South Trinity drainages. Meanwhile, the proximity of the upper low may support a couple of showers or even an isolated thunderstorm in the vicinity of the South Complex on Tuesday or Wednesday. Overall, this period will be characterized by below normal temperatures, above normal humidity, good and excellent nighttime humidity recoveries, and moderate northwest breezes each afternoon and evening.

FIRE BEHAVIOR

GENERAL

Expect the fire behavior to be minimal until late morning/early afternoon. Fire spread will be primarily upslope/up canyon during the operational period. Backing fire and roll-out will also contribute to spread. Moderate fire behavior should be anticipated after the winds increase and override the effects of the inversion this afternoon. Hayfork ERC for August 7 was 54.

SPECIFIC FIRE BEHAVIOR

Brush/previous burn areas: potential worst-case surface fire spread will be 15-25 chains/hour with flame length 4-6 feet. Backing fire rate of spread less than 2 chains/hour. Spotting could increase total spread distance significantly. Maximum spotting distance up to ¼ mile. Probability of ignition at the peak of the burning period will be 60-70%.

Timber fuel types: potential worst-case surface fire spread will be 6-9 chains/hour with flame length 3 to 5 feet. Backing fire to 2 chains/hour. Individual and group-tree torching and short-duration crown runs should be expected. Spotting distance to ¼. Probability of ignition will be 60-70%.

Areas of Concern:

Divisions M, U: spotting due to rollout and torching near the line are the biggest concerns especially when afternoon NW winds surface.

Division Z: wind-driven runs and spotting in the afternoon on both the west and east sides of the Pattison Fire.

AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke. Conditions may improve in the afternoon.

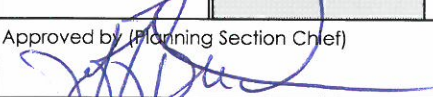

Sunrise: 06:17

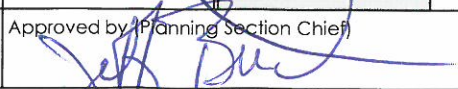

Sunset: 20:20

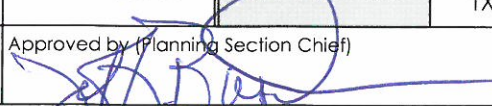

SAFETY

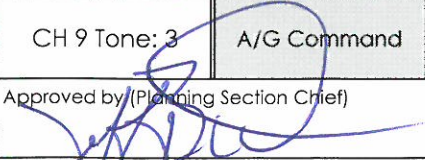

- Maintain good communications with adjoining Divisions and relay any change in fire behavior promptly.
- Burnout operations may result in fire running back towards control lines when rollout occurs on steeper slopes.
- Know your escape routes and time them based on current and expected fire behavior.

FURADAN IN MARIJUANA GROWS POSES OFFICER SAFETY RISK

On August 25, 2014 a multi-agency team conducted a marijuana enforcement operation at an illegal cultivation site located on National Forest land in Shasta County, California. Officers eradicating the marijuana plants noted that the bottom portions of the stalks were coated with a pink substance. A suspect arrested at the scene disclosed the plants had been treated with **carbofuran**, a pesticide known under the trade name **Furadan** (most common), and others. The suspect stated the pesticide was intended to kill squirrels, rabbits and deer that were eating the marijuana plants. After exposure, at least four officers complained of symptoms including headache, nausea, and a burning sensation in the extremities.

Formerly a U.S. registered pesticide, in March 2009 the U.S. Environmental Protection Agency (EPA) revoked all food tolerances for carbofuran, prohibiting its use on crops intended for human consumption. An eventual ban in the U.S. is anticipated. Carbofuran is highly toxic to vertebrates – a quarter teaspoon (1 ml) is potentially fatal to humans. A cholinesterase inhibitor (neurotoxin), carbofuran exposure can result from inhalation, ingestion, eye, or skin contact. The precautionary statement published by the manufacturer prior to the EPA food tolerance revocation states people handling Furadan should minimally wear long-sleeve shirts, long pants, chemical-resistant gloves, protective eyewear, and use a respirator with a canister approved for pesticides. Symptoms of poisoning include weakness, headache, nausea, vomiting, abdominal cramps, diarrhea, tight chest, blurred vision, constricted pupils, and abnormal saliva flow. Seek immediate medical attention if you are exposed to carbofuran and experience any symptoms.

In addition to using carbofuran to discourage herbivores from feeding on marijuana, illegal growers also add it to bait to kill bears, raccoons, and other animals they fear or consider pests. In July 2013, a rare Pacific fisher killed by a pesticide in the same family as carbofuran was discovered in a marijuana grow site in northern California. In Africa, farmers use carbofuran to illegally kill lions and other predators. Formerly available in the U.S. in pellet form, carbofuran is most commonly encountered as a concentrated pink liquid. Marijuana growers use plastic bottles or other containers to mix the concentrate with water. The solution is applied to marijuana plants by wiping or spraying.
