South Complex Fire Weather Forecast

FORECAST NO: 15 **NAME OF FIRE:** South Complex
PREDICTION FOR: Monday Day Shift **UNIT:** Shasta-Trinity National Forest
SHIFT DATE: Aug 10, 2015 **SIGNED:** *David J Shallenberger* 
TIME AND DATE **Incident Meteorologist (T)**
FORECAST ISSUED: Aug 9, 2015 @ 1930 PDT

WEATHER DISCUSSION:

The upper level low will continue to sag south on Monday and into Monday night as mid-level winds will begin to switch around from the west to the southwest. This will bring a more-dry and gusty wind to ridge tops above 3500 feet with the higher terrain to the southwest on Route Complex blocking any lower level flow. This pattern will continue into Tuesday with minimum relative humidity values in the lower 20s but with max temperatures in the mid to upper 80s. A fair relative humidity recovery will occur on Monday night due to the lower relative humidity values on the previous day. With the main impact on the ridges, the valleys will remain mostly stable through the period.

Weather Forecast for Monday:

Weather: Mostly Sunny, then a Few Afternoon Clouds.

High Temperature... 75°-85°

Min RH..... 22-32%

20-FOOT WINDS:

Ridgetop..... West wind 2-6 mph in the morning, rising to 11-16 mph in the afternoon.

Slope/Valley..... Upslope/upvalley 3-6 mph, becoming dominated by west winds 5-10 mph in the afternoon.

CWR (>=0.10")....0% **LAL....**1 (No Lightning)

Weather Forecast for Monday Night:

Weather: Mostly Clear

Low Temperature... 52°-57°

Max RH..... Fair Recovery: 65-75%

20-FOOT WINDS:

Ridgetop..... Southwest 7-12 mph early this evening, becoming nearly calm overnight

Slope/Valley..... Becoming light and variable, or calm

CWR (>=0.10").... 0% **LAL....** 1 (No Lightning)

Outlook for Tuesday:

Weather: Partly Cloudy

High Temperature... 76°-86°

Min RH..... 20-30%

20-FOOT WINDS:

Ridgetop..... South-southwest wind 2-5 mph in the morning, rising to 10-14 mph in the afternoon.

Slope/Valley..... Upslope/upvalley 4-8 mph, becoming dominated by South-southwest winds 6-10 mph in the afternoon

CWR (>=0.10")....0% **LAL....**1 (No Lightning)

EXTENDED OUTLOOK for Wednesday through Friday:

An upper low off the Oregon coast will continue to sag south and meander just off the northern CA coast by Wednesday into Thursday. This will continue to bring a more moist flow into the incident area and increased cloud cover. A possible isolated shower or thunderstorm will remain in the forecast for Wednesday and Thursday. As a weak trough passes through on Thursday, a weak low level northwest wind will return with higher wind gusts, warmer temperatures, and lower relative humidity arriving by Friday.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 15	TYPE OF FIRE: Wildland Fire
FIRE NAME: South Complex	OPERATIONAL PERIOD: 0600 – 1800, August 10, 2015
DATE ISSUED: AUGUST 9, 2015	TIME ISSUED: 2100
UNIT: Shasta-Trinity NF	SIGNED: /s/ Ken Larson, FBAN

INPUTS

WEATHER SUMMARY: *** See attached Fire Weather Forecast***

Discussion: The upper level low will be dipping south today into tonight bringing a switch in the wind direction to a west to south direction. Daytime relative humidity values will decrease into the low 20's.

Weather: Mostly sunny then a few afternoon clouds.

Max Temp: 75 - 85°

Min RH: 22 - 32%

Winds (20 foot): Ridgetop: SW 2-6 mph in the morning, increasing to 12-16 mph in the afternoon.

Slope/Valley: Upslope/upvalley 4-8 mph, becoming dominated by SW winds 8-12 in the afternoon.

FIRE BEHAVIOR

GENERAL

Expect the fire behavior to be minimal until late morning/early afternoon. Fire spread will be primarily upslope/up canyon during the operational period. Backing fire and roll-out will also contribute to spread. Moderate fire behavior should be anticipated after the SW winds increase late in the day.

Hayfork ERC for August 9 was 54.

SPECIFIC FIRE BEHAVIOR

Brush/previous burn areas: potential worst-case surface fire spread will be 20-35 chains/hour with flame length 5-7 feet. Backing fire rate of spread less than 2 chains/hour. Spotting could increase total spread distance significantly. Maximum spotting distance up to ½ mile. Probability of ignition at the peak of the burning period will be 70-80%.

Timber fuel types: potential worst-case surface fire spread will be 8-12 chains/hour with flame length 4 to 6 feet. Backing fire to 2 chains/hour. Individual and group-tree torching and short- to moderate-duration crown runs should be expected. Spotting distance to ½ mile. Probability of ignition will be 70-80%.

Areas of Concern:

Divisions Q, S, U, Z: any unsecured control lines could be breached especially near ridgetops. Unburned interior islands near control lines may result in torching and spotting. Indirect control lines could be compromised.

AIR OPERATIONS

Air operations may be limited much of the day due to poor visibility caused by smoke. Conditions should improve in the afternoon.

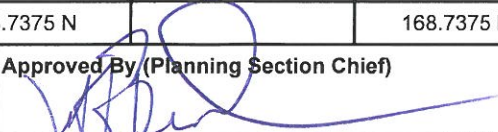

Sunrise: 06:19

Sunset: 20:18

SAFETY

- Evaluate safety zones and escape routes for anticipated fire behavior; post lookouts to monitor fire behavior and maintain situational awareness.
- Fight fire aggressively, having provided for safety first.

SAFETY MESSAGE

Planning for Safety

- Working in high-risk environments requires effective planning to protect personnel from the hazards they may face.
- You should have tactical, safety and communication plans which work in concert with one another.
- Each plan should include primary, alternate, contingency, and emergency components which are known by all personnel.
- Changing from your primary plan should be a red flag that your safety may become compromised.

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION STRONG WINDS	HEAVY EQUIPMENT DANGER TREES COMPLACENCY
--	---	--

Be sure all elements of your safety plan are in place prior to engagement

Hazardous Tree Indicators:

- Strong winds.
- Night Operations.
- Steep Slopes.
- Disease or bug-kill timber.
- Trees and duff have been burning for an extended period.
- High-risk tree species (rot and shallow root system – tan oaks, redwoods).
- Numerous down trees.
- Dead or broken tops and limbs overhead.
- Accumulation of downed limbs.
- Absence of needles, bark or limbs.
- **Leaning or hung-up trees.**

Have multiple plans and make them know

- P – Primary Plan (Offense)**
Focused on firefighter safety and mission objectives
- A – Alternate Plan (Offense)**
A fall back plan that closely supports the primary
- C- Contingency Plan (Defense)**
Entirely focused on firefighter safety
- E – Emergency Plan (Defense)**
Entirely focused on individual firefighter survival

FURADAN IN MARIJUANA GROWS POSES OFFICER SAFETY RISK

On August 25, 2014 a multi-agency team conducted a marijuana enforcement operation at an illegal cultivation site located on National Forest land in Shasta County, California. Officers eradicating the marijuana plants noted that the bottom portions of the stalks were coated with a pink substance. A suspect arrested at the scene disclosed the plants had been treated with **carbofuran**, a pesticide known under the trade name **Furadan** (most common), and others. The suspect stated the pesticide was intended to kill squirrels, rabbits and deer that were eating the marijuana plants. After exposure, at least four officers complained of symptoms including headache, nausea, and a burning sensation in the extremities.

Formerly a U.S. registered pesticide, in March 2009 the U.S. Environmental Protection Agency (EPA) revoked all food tolerances for carbofuran, prohibiting its use on crops intended for human consumption. An eventual ban in the U.S. is anticipated. Carbofuran is highly toxic to vertebrates – a quarter teaspoon (1 ml) is potentially fatal to humans. A cholinesterase inhibitor (neurotoxin), carbofuran exposure can result from inhalation, ingestion, eye, or skin contact. The precautionary statement published by the manufacturer prior to the EPA food tolerance revocation states people handling Furadan should minimally wear long-sleeve shirts, long pants, chemical-resistant gloves, protective eyewear, and use a respirator with a canister approved for pesticides. Symptoms of poisoning include weakness, headache, nausea, vomiting, abdominal cramps, diarrhea, tight chest, blurred vision, constricted pupils, and abnormal saliva flow. Seek immediate medical attention if you are exposed to carbofuran and experience any symptoms.

In addition to using carbofuran to discourage herbivores from feeding on marijuana, illegal growers also add it to bait to kill bears, raccoons, and other animals they fear or consider pests. In July 2013, a rare Pacific fisher killed by a pesticide in the same family as carbofuran was discovered in a marijuana grow site in northern California. In Africa, farmers use carbofuran to illegally kill lions and other predators. Formerly available in the U.S. in pellet form, carbofuran is most commonly encountered as a concentrated pink liquid. Marijuana growers use plastic bottles or other containers to mix the concentrate with water. The solution is applied to marijuana plants by wiping or spraying.

Incident Training Program

Trainee/ Mentor Activities

The following contains information for both trainee and trainer/ evaluator regarding the Incident Training Program. The information is intended to assist you in planning your incident activities.

1. Trainee and Mentor/ Evaluator register with the Training Specialist (TNSP)
2. It is only necessary to follow up with the TNSP during your assignment if you have any significant issues... ie: Changes in assignment/trainer, problems with the assignment etc.
3. The trainer and evaluator must “close-out” with the TNSP prior to DEMOB.

The close out process involves:

- The Trainer completing an Individual Performance Evaluation (ICS 225 or 226)
 - The Trainee will complete an Exit Interview form. Forms are available at the TNSP desk.
 - The evaluator should have all work completed in the position task book at the time the training assignment close-out including a recommendation as to the outcome of the assignment, ie; recommend certification, needs more assignments.
4. If you reach a point that as much work has been done in the position task book as possible, on this incident, you may perform the close-out process with the TNSP saving you time and a potential wait in line at time of DEMOB.
 5. Pay close attention to TNSP IAP messages and briefing announcements concerning time lines and issues regarding the Incident Training Program.

INCIDENT TRAINEE REGISTRATION FORM

Complete ALL fields and return to Training Specialist or DROP BOX for entry into database.

Remember to close out training packets with the Training Specialist before DEMOB.
