# South Complex Fire Weather Forecast

FORECAST NO: 19 NAME OF FIRE: South Complex

Shasta-Trinity National Forest PREDICTION FOR: Wednesday Day Shift UNIT:

David J. Shallenberger SIGNED: SHIFT DATE: Aug 12, 2015

Incident Meteorologist (T) TIME AND DATE

FORECAST ISSUED: Aug 11, 2015 @ 1900 PDT

#### **WEATHER DISCUSSION:**

The upper level low over the NW CA and OR coast will impact the area for another period as mid-level or ridge top winds will once again shift around from the southeast to the southwest and become up to 14 mph through the day on Wednesday. Valley and upslope winds will be the dominant feature through the morning hours and in some of the major drainages such as the Trinity and South Fork Trinity where northwest winds will dominate but become strong up to 12 mph later in the day. With the influx of moisture from the low, afternoon cumulus buildup will be possible again for Wednesday and Thursday.

Weather Forecast for Wednesday:

Weather: Partly Cloudy. Afternoon cumulus buildups may bring a brief sprinkle or a shower, amounting to a trace or just 0.01".

High Temperature... 77°-86°

Min RH..... 23-33%

20-FOOT WINDS:

Ridgetop..... Southeast winds 3-7 mph in the morning, shifting around and becoming more

southwesterly 8-14 mph in the late afternoon.

Slope/Valley..... Upslope/upvalley 4-8 mph, with a northwest wind 7-12 mph developing in the major

Trinity and South Trinity drainages around mid-afternoon.

LAL....1 (No Lightning) CWR (>=0.10")....0%

Weather Forecast for Wednesday Night:

Weather: Partly Cloudy this evening, then Clear overnight.

Low Temperature... 54°-58°

Max RH..... Good Recovery: 70-80%

20-FOOT WINDS:

**Ridgetop.....** Southwest 6-10 mph early this evening, becoming calm overnight.

Slope/Valley..... Becoming light and variable after midnight.

LAL.... 1 (No Lightning) CWR (>=0.10").... 0%

<u>Outlook for Thursday:</u>
Weather: Partly Cloudy, with some cumulus buildups and isolated showers in the afternoon.

High Temperature... 78°-87° Min RH..... 23-33%

20-FOOT WINDS:

**Ridgetop.....** Southeast-south wind 2-6 mph early, becoming west at 12-16 mph in the afternoon. Slope/Valley..... Upslope/upvalley 4-8 mph, becoming dominated by west-northwest winds in

the afternoon.

CWR (>=0.10")....0% LAL....1 (No Lightning)

EXTENDED OUTLOOK for Friday through Sunday:

The upper low will finally eject and move off to the northeast by Friday with northwest mid-level winds returning to the area. The ridge top winds will continue to shift around to the northwest and north into the weekend. With northwest drainage alignment, winds could gust to 20 mph on Friday or Saturday. This will create a dry and hot pattern across the area with RH values struggling to get out of the teens. Skies will be relatively clear as well.

#### FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 19	TYPE OF FIRE: Wildland Fire
FIRE NAME: South Complex	OPERATIONAL PERIOD: 0600 – 1800, August 12, 2015
DATE ISSUED: AUGUST 11, 2015	TIME ISSUED: 2030
UNIT: Shasta-Trinity NF	SIGNED: /s/ Ken Larson, FBAN
ONT. Onasta-Tillity N	GIGHED. 737 Neil Laisoll, FDAN

#### **INPUTS**

#### WEATHER SUMMARY:

\*\*\*See attached Fire Weather Forecast\*\*\*

**Discussion:** An upper level low over the NW California and Oregon coast Wednesday will bring southeasterly breezes this morning, switching to moderate southwest breezes over ridgetops in the afternoon.

Weather: Partly cloudy. Some afternoon cumulus buildups.

Max Temp: 77 - 86° Min RH: 23 - 33%

Winds (20 foot): Ridgetop: SE winds 3-7 mph in the morning, becoming more southwesterly 8-13 mph in the afternoon.

Slope/Valley: Upslope/upvalley 4-8 mph, with a NW wind 7-12 mph developing in the Trinity River

drainages around mid afternoon.

#### FIRE BEHAVIOR

#### GENERAL

Expect the fire behavior to be minimal until late morning/early afternoon. Fire spread will be primarily upslope/up canyon during the operational period. Backing fire and roll-out will also contribute to spread. Moderate fire behavior should be anticipated after the southwesterly ridge winds and northwesterly drainage winds increase in the afternoon. Hayfork ERC for August 10 was 53.

#### SPECIFIC FIRE BEHAVIOR

Brush/previous burn areas: potential worst-case surface fire spread will be 15-25 chains/hour with flame length 4-6 feet. Backing fire rate of spread less than 2 chains/hour. Spotting could increase total spread distance significantly. Maximum spotting distance up to ¼ mile. Probability of ignition at the peak of the burning period will be 70-80%.

Timber fuel types: potential worst-case surface fire spread will be 6-10 chains/hour with flame length 2 to 4 feet. Backing fire to 2 chains/hour. Individual and group-tree torching and short-duration crown runs should be expected. Spotting distance to ¼ mile. Probability of ignition will be 70-80%.

Areas of Concern:

Division M: upper level southwesterly winds may impact the indirect line between DP-61 and the river.

Division Q: the Mill and York fires may be impacted by the NW upcanyon winds this afternoon/evening; the NE corner of the Castle Fire will see increased southwesterly winds in the afternoon/evening.

Divisions U, S, Z: any unsecured control lines could be breached especially near ridgetops. Unburned interior islands near control lines may result in torching and spotting. Indirect control lines could be compromised.

#### **AIR OPERATIONS**

Air operations may be limited much of the day due to poor visibility caused by smoke. Conditions should improve in the afternoon.

Sunrise: 06:20 Sunset: 20:15

#### SAFETY

- Moderate Fire Behavior will occur when afternoon winds increase and the inversion lifts; set trigger points and evaluate fire and weather conditions and continue to reevaluate throughout the shift.
- Evaluate safety zones and escape routes for anticipated fire behavior; post lookouts to monitor fire behavior and maintain situational awareness.

INCIDENT	NAME: South Complex	DATE PREPARED:  August 11, 2015  TIME PREPARED: 1600 HOURS	OPERATIONAL PERIOD Day Shift 08/12/15 0600-1800 Prepared by S. Davis
		######################################	

# Lookouts Communications Escape Routes Safety Zones

# **South Complex**

Operation Period: 08/12/2015 Day Shift

# **Emphasis on Leadership**

# Crew Safety Is Dependent Upon Competent And Confident Leadership

Every Incident Supervisor Has The Responsibility To Confirm That Safe Practices Are Known And Observed

- TAKE CHARGE of assigned resources
- MOTIVATE crew members with a "can do" safety attitude
- DEMONSTRATE INITIATE by taking appropriate action in the absence of orders
  - COMMUNICATE by giving specific instructions and asking for feedback
    - SUPERVISE at the scene of the action

## **MAJOR HAZARDS AND RISKS**

STEEP TERRAIN	ROLLING MATERIAL	HEAVY EQUIPMENT
COMPLACENY	RATTLESNAKES	HAZARD TREES
FATIGUE	DEHYDRATION	MARIJUANA GROWS
SPOT FIRES	DRIVING HAZARDS	STUMP HOLES

Be sure all elements of your safety plan are in place prior to engagement

# **Spot Fires**

- Size up prior to engagement
- Watch for multiple spots
- Establishing an anchor point can sometimes be difficult
- Utilize aircraft if available
- Frequent spots across the line is a watch out situation
- Ensure LCES is in place
- Maintain situational awareness at all times

# **Radio Communications**

- Use clear and concise language when transmitting
- Pause briefly before speaking when transmitting
- Acknowledge messages to ensure they were received
- Keep spare batteries readily available
- When channels are busy, keep radio traffic to a minimum
- Always scan the command, tactical, and air to ground channels
- Seek assistance from the communications unit is you have questions about radio operation

Nor Cal Team 2 Safety Officers Terry O'Connell, Steve Davis SOF2

# Central Valley California HIDTA September 2, 2014

#### FURADAN IN MARIJUANA GROWS POSES OFFICER SAFETY RISK

On August 25, 2014 a multi-agency team conducted a marijuana enforcement operation at an illegal cultivation site located on National Forest land in Shasta County, California. Officers eradicating the marijuana plants noted that the bottom portions of the stalks were coated with a pink substance. A suspect arrested at the scene disclosed the plants had been treated with **carbofuran**, a pesticide known under the trade name **Furadan** (most common), and others. The suspect stated the pesticide was intended to kill squirrels, rabbits and deer that were eating the marijuana plants. After exposure, at least four officers complained of symptoms including headache, nausea, and a burning sensation in the extremities.

Formerly a U.S. registered pesticide, in March 2009 the U.S. Environmental Protection Agency (EPA) revoked all food tolerances for carbofuran, prohibiting its use on crops intended for human consumption. An eventual ban in the U.S. is anticipated. Carbofuran is highly toxic to vertebrates – a quarter teaspoon (1 ml) is potentially fatal to humans. A cholinesterase inhibitor (neurotoxin), carbofuran exposure can result from inhalation, ingestion, eye, or skin contact. The precautionary statement published by the manufacturer prior to the EPA food tolerance revocation states people handling Furadan should minimally wear long-sleeve shirts, long pants, chemical-resistant gloves, protective eyewear, and use a respirator with a canister approved for pesticides. Symptoms of poisoning include weakness, headache, nausea, vomiting, abdominal cramps, diarrhea, tight chest, blurred vision, constricted pupils, and abnormal saliva flow. Seek immediate medical attention if you are exposed to carbofuran and experience any symptoms.

In addition to using carbofuran to discourage herbivores from feeding on marijuana, illegal growers also add it to bait to kill bears, raccoons, and other animals they fear or consider pests. In July 2013, a rare Pacific fisher killed by a pesticide in the same family as carbofuran was discovered in a marijuana grow site in northern California. In Africa, farmers use carbofuran to illegally kill lions and other predators. Formerly available in the U.S. in pellet form, carbofuran is most commonly encountered as a concentrated pink liquid. Marijuana growers use plastic bottles or other containers to mix the concentrate with water. The solution is applied to marijuana plants by wiping or spraying.

# TRAINING SPECIALIST MESSAGE

# In order to receive documented credit for your training assignment – you must close out with the Training Specialist prior to Demob!!

# Beat the Rush!!

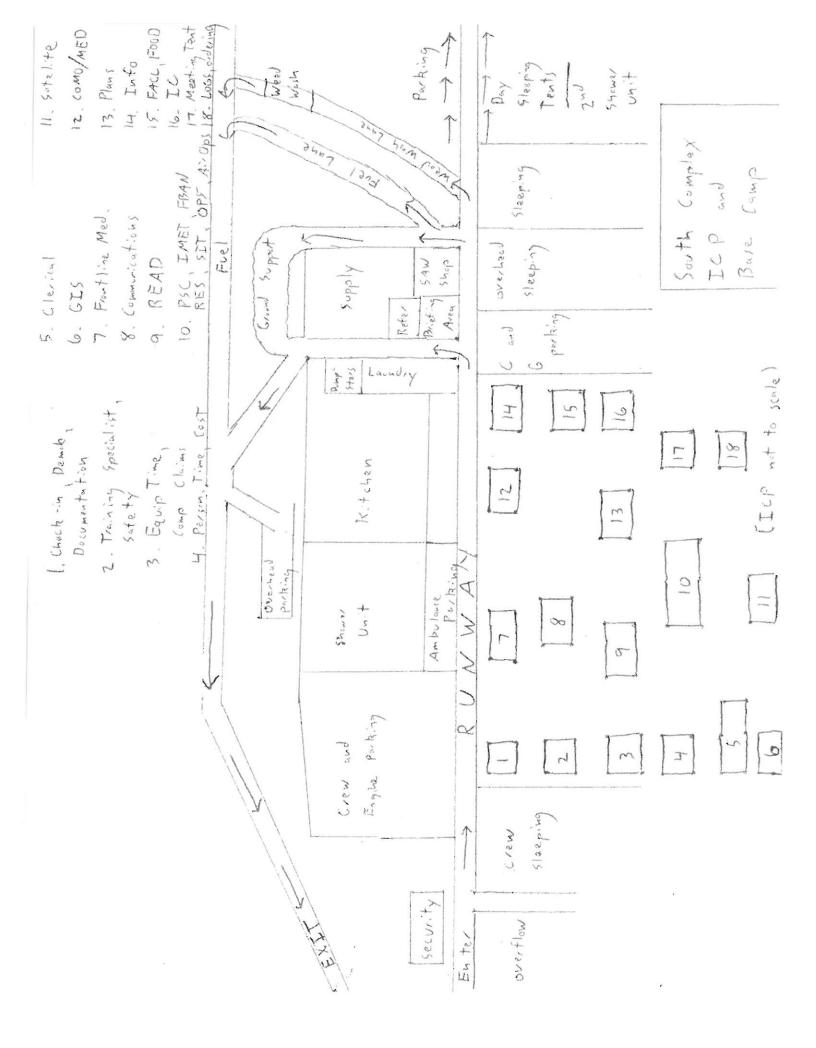

Trainer / Evaluators: If as much work as possible has been completed in the position task book, you are <u>strongly</u> encouraged to take advantage of your time in camp and conduct the training close-out with the TNSP. It is not necessary to wait until demob!

Bring the following to the "exit interview"

- A completed and signed ICS 225 Performance Evaluation
  - A completed Exit Interview Form

Forms are available at the Training Desk

Brad Smith – TNSP Sean Wolf – TNSP(t)

# NORCAL 2 INCIDENT MANAGEMENT TEAM WATER USAGE LOG

NCY ID / VENDOI	I.e Strik	e Team 1110	C, Acme W	ater Tenders	
UEST#					
WATER SOURCE LOCATION	Hydrant	Open source i.e. pond	Tank	Gallons Used	Property Owner / Contact Number if known **
			-		

The intent of this document is intended to track, record and validated the amount of water used on an incident. It's not intended to review the performance of equipment using the water on an incident.
