INPUTS

WEATHER SUMMARY: ***See attached Fire Weather Forecast***

Discussion: Nighttime inversions will become established by midnight, with good and excellent humidity recovery overnight. Gentle and moderate winds this evening will become light overnight.

Weather: Partly cloudy becoming clear overnight.

Min Temp: 54 - 58°

Max RH: 75-90%

Winds (20 foot): Ridgetop: W-SW 6 – 10 mph early, becoming E-SE 2-4 after midnight.

Slope/Valley: NW 6-10 early in Trinity River drainages becoming light and variable around midnight.

FIRE BEHAVIOR

GENERAL

Fire behavior will be active late afternoon through early evening as drainage winds impact lower elevations and west-southwest winds impact upper elevations of the fire area. Fire spread will be primarily upslope/up canyon with some occasional runs through early evening. Backing fire and roll-out will also contribute to spread. After dark expect the fire behavior to moderate with minimal activity after midnight. Hayfork ERC for August 11 was 48.

SPECIFIC FIRE BEHAVIOR

Brush/previous burn areas: potential worst-case surface head fire spread will be 15-25 chains/hour with flame length 4 to 6 feet until early evening then moderate to 2-4 chains/hour, flame length 1-2 feet. Backing fire rate of spread up to 2 chains/hour. Maximum spotting distance ¼ mile decreasing to short range after dark. Probability of ignition will drop to 10-20% during the night.

Timber fuel types: potential worst-case surface fire spread will be 6-9 chains/hour with flame length 2 to 4 feet, becoming 2-4 chains/hour, flame length to 4 feet late evening. Backing fire rate of spread to 2 chains/hour. During the evening individual and group tree torching and short-duration crown runs could occur. Spotting distance ¼ mile decreasing to short range late. Probability of ignition will be 10-20%.

Areas of Concern:

Division M: upcanyon NW winds may impact the indirect line between DP-61 and the river.

Division Q: the Mill and York fires may be impacted by the NW upcanyon winds late afternoon/evening; the NE corner of the Castle Fire will see increased west-southwesterly winds late afternoon/evening.

Divisions U, S, Z: any unsecured control lines could be breached especially near ridgetops. Unburned interior islands near control lines may result in torching and spotting. Indirect control lines could be compromised.

AIR OPERATIONS

Air operations may be limited due to poor visibility caused by smoke.

Sunset: 20:15

Sunrise: 06:21

SAFETY

- Keep informed on fire weather conditions and forecasts. Pay attention to changing weather conditions.
- Terrain and fuels make escape to safety zones difficult.

Every Incident Supervisor Has The Responsibility To Confirm That Safe Practices Are Known And Observed

- **TAKE CHARGE** of assigned resources
 - **MOTIVATE** crew members with a “can do” safety attitude
- **DEMONSTRATE INITIATE** by taking appropriate action in the absence of orders
 - **COMMUNICATE** by giving specific instructions and asking for feedback
 - **SUPERVISE** at the scene of the action

FURADAN IN MARIJUANA GROWS POSES OFFICER SAFETY RISK

On August 25, 2014 a multi-agency team conducted a marijuana enforcement operation at an illegal cultivation site located on National Forest land in Shasta County, California. Officers eradicating the marijuana plants noted that the bottom portions of the stalks were coated with a pink substance. A suspect arrested at the scene disclosed the plants had been treated with **carbofuran**, a pesticide known under the trade name **Furadan** (most common), and others. The suspect stated the pesticide was intended to kill squirrels, rabbits and deer that were eating the marijuana plants. After exposure, at least four officers complained of symptoms including headache, nausea, and a burning sensation in the extremities.

Formerly a U.S. registered pesticide, in March 2009 the U.S. Environmental Protection Agency (EPA) revoked all food tolerances for carbofuran, prohibiting its use on crops intended for human consumption. An eventual ban in the U.S. is anticipated. Carbofuran is highly toxic to vertebrates – a quarter teaspoon (1 ml) is potentially fatal to humans. A cholinesterase inhibitor (neurotoxin), carbofuran exposure can result from inhalation, ingestion, eye, or skin contact. The precautionary statement published by the manufacturer prior to the EPA food tolerance revocation states people handling Furadan should minimally wear long-sleeve shirts, long pants, chemical-resistant gloves, protective eyewear, and use a respirator with a canister approved for pesticides. Symptoms of poisoning include weakness, headache, nausea, vomiting, abdominal cramps, diarrhea, tight chest, blurred vision, constricted pupils, and abnormal saliva flow. Seek immediate medical attention if you are exposed to carbofuran and experience any symptoms.

In addition to using carbofuran to discourage herbivores from feeding on marijuana, illegal growers also add it to bait to kill bears, raccoons, and other animals they fear or consider pests. In July 2013, a rare Pacific fisher killed by a pesticide in the same family as carbofuran was discovered in a marijuana grow site in northern California. In Africa, farmers use carbofuran to illegally kill lions and other predators. Formerly available in the U.S. in pellet form, carbofuran is most commonly encountered as a concentrated pink liquid. Marijuana growers use plastic bottles or other containers to mix the concentrate with water. The solution is applied to marijuana plants by wiping or spraying.
