----------------------------	--	---------------------------	------------------------

4. Operational Period
DAY 08/11/15 0600 – 2100

5. General Control Objectives for the Incident (include alternatives)
Strategic Framework
 Provide for aggressive fire suppression utilizing direct and indirect tactics and providing point protection to threatened structures within the fire area. The threat to life, property and values at risk remains high. Tactics which reflect limited firefighting resources on hand and utilizing existing control features in areas with a high probability of success should be applied. Potential for continued fire spread is high due to fuels, weather and time of season.

Leaders Intent
 Provide the highest level of customer services to all involved with or impacted by the Mad River Complex. All incident assigned personnel should be prepared to take the appropriate actions regarding:

- Personal interactions internal and external to the incident management organization
- Personal safety and the safety of others
- Response to any incident-within-an-incident

Objectives

- Provide for Firefighter and Public safety through hazard recognition and application of the risk management process.
- Reduce the threat to private property, residences and infrastructure through the application of direct suppression tactics.
- Protect natural resources through utilization of control features that offer a high probability of success.
- Engage in fire suppression operations that are cost effective, but commensurate with values at risk.
- Protect wilderness values and botanical resources by ensuring Minimum Impact Suppression Tactics (MIST) are applied.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 19	TYPE OF FIRE: Wildland Fire
FIRE NAME: Mad River Complex	OPERATIONAL PERIOD: Day
DATE / TIME ISSUED: Aug 10, 2015 2000	DATE: Aug 11, 2015 Tuesday
UNIT: Six Rivers NF / Mad River	SIGNED:  Steve Paes FBAN

INPUTS

WEATHER SUMMARY:

Partly sunny with areas of smoke.
Max. Temperatures: 82-88 valleys, 72-78 ridges.
Min. Relative Humidity: 19-27% valleys, 20-30% ridges.
Wind: Slope/Valley- light and variable in the morning, becoming upcanyon/upslope 4-7mph with gusts to 13 mph.
Ridgetop Winds- Southerly 4-7 mph gusts to 12 mph becoming 10-15 mph with gusts to 25 mph.

GENERAL:

- The fire is burning primarily timber Fuels with some brush and grass intermix. The primary carrier of surface fire is heavy forest litter with a shrub or small tree understory.
- Fire spread will be primarily topography driven. Expect the predominant fire spread to be backing downhill. Roll out on steep slopes can contribute to rates of spread. Expect up to 10-20 chains of downhill progression during the shift.
- Head fire on steep slopes can transition to crown fire, especially on slopes that align with general winds.
- Smoke over the fire has had a dampening effect on fire behavior. **Smoke lifting, and clearing skies, will be an indicator that fire behavior will increase.**
- Anticipate torching in the afternoon.

Rates of spread: Timber-head fire = 3-12ch/hr (depending on slope), backing fire= 1-3 ch/hr.

Grass- head fire 30 ch/hr, backing fire 2ch/hr

Flame lengths: Timber-head fire= 8ft., backing fire= 2ft.

30 Grass- head fire 5ft., backing fire 1ft.

Probability of Ignition (PIG) = 50% shaded fuel, 70% exposed fuel

Short range spotting occurs with light winds and moderate fire activity. Spotting distances of up to ½ mile can occur with crown fire.

Dead fuel moisture contents: 1hr= 4%, 10hr = 5% , 100hr and 1000hr =10%

Live Fuel Moisture: Timber 150%, Shrubs 80%.

SPECIFIC:

- DIV B: Control lines are far enough up the slope to be effected by ridgetop winds.
- DIV D: The fire moving downhill on the ridge at the D/E break could approach the road during the shift. Upcanyon winds along the Trinity River drainage will affect the fire as it approaches the road.
- DIV E: The fire may approach the 1S26 Rd. during the shift and be affected by upcanyon winds.
- DIV F: The fire should not move toward the Division contingency line during the shift. The fire has not been moving laterally across slopes and winds are favorable for preventing spread to the east.
- DIV W: Control lines are sheltered from ridge and upcanyon winds, expect uphill winds along the fire perimeter.
- Lassic Fire: The fire has the most exposure to ridgetop winds. The fire south of Bear Cr. should move uphill toward the 1S07 Rd. The trees on the upper half of that slope are spaced further apart and are less likely to carry a crown fire. Active fire is approaching portions of Blanket Cr. The fire is expected to eventually cross that drainage and move north to control lines. Portions of that slope have grass fuels that have rates of spread up to 30 ch/hr.

AIR OPERATIONS

Western portions of the complex are more likely to have clear skies for air ops.

SAFETY

Don't fall into the "same old – same old" trap. Fire behavior can change in an instant. STAY ALERT!

MAD RIVER COMPLEX SAFETY MESSAGE

Day Shift 0600-2100

Tuesday 08/11/2015

MAJOR HAZARDS:

- POTENTIAL FOR ACTIVE FIRE BEHAVIOR WITH ALLIGNMENT OF WIND/SLOPE
- DRIVING ON COUNTY AND INCIDENT ROADS
- HAZARDOUS TREES

Watch out Situation: Unfamiliar with weather and local factors influencing fire behavior.

- **Fire Behavior** – Four years of drought has resulted in low live fuel moisture earlier in the season than normal as well as very low dead fuel moistures. With the prediction for lower relative humidity and strong, sometimes gusty winds be prepared for the possibility of active fire. To help mitigate this concern maintain situational awareness and insure that LCES is in place and being adhered to.
- **Driving on the Incident** – Forest System Roads in areas where personnel will be working can be narrow, winding with few wide spots for turning around or getting by opposing traffic. Be alert for rock and other debris on roads in burned areas. The County roads have good running surfaces that can result in excessive speeds. Inattention, distracted driving, or nodding off due to fatigue could easily result in tragedy. Keep your speed down. Drive with headlights on. Make sure drivers are well-rested. Increase following distances on dusty roads.
- **Hazardous Trees** – Perhaps the safety issue with the highest probability for serious injury is snags and green hazardous trees. Carefully assess potential hazard trees prior to engaging resources. Be especially careful during the upcoming wind event and with trees with potential root damage from the fire. Review page 22 of the 2014 IRPG for hazard tree safety.

MOUNTAIN DRIVING

Driving presents one of the greater risks faced by personnel on this incident. Drive defensively at appropriate speeds which allow you to react to meeting the unexpected. Be able to stop your vehicle within one half of the visible distance on blind curves. Driving demands your full attention. Pull off the road in a safe location when placing or receiving a cell phone call. Chock vehicles parked on slopes. Use backers whenever available.

Symptoms & Signs of Heat Illness

Heat Exhaustion: Victim will have cool, clammy skin; pale coloring; feel weak, dizzy and/or nauseous.

Treatment – Have individual sit in shade or cool area; administer fluids; loosen clothing and assure rest.

Heat Stroke: *This is a life-threatening medical emergency!!*

Victim will have hot, dry, red skin and possible convulsions. These symptoms can progress to unconsciousness and death!

Treatment – Initiate emergency medical procedures outlined in incident Med Plan. Immediately cool individual's body by pouring water over them, especially the head and upper body. Monitor the victim and provide whatever medical support necessary. Placing ice around the neck, groin and armpits can help speed the cool down.

Initiate care with available resources at scene and notify DIVS when an injury occurs.

The DIVS, or designee, shall coordinate the incident and direct necessary actions. Take the following actions:

1. Determine the nature of the emergency.
2. If the emergency is a medical injury/illness, determine if the injury/illness is life threatening.
3. If the injury is life threatening, then clear designated frequency for emergency traffic.
4. Identify the on-scene point of contact by position.
5. Contact the Medical Unit Leader immediately.
6. Identify number injured, patient assessment(s) and location (geographic and/or GPS coordinates).
7. Identify on-scene medical personnel by position and last name (i.e. EMT Jones).
8. Identify preferred method of patient transport.
9. Determine any additional resources or equipment needed.

Continually evaluate the Evacuation Plan, develop contingencies in the event the first plan is not effective.
