<b>INCIDENT OBJECTIVES</b>	1. Incident Name <b>Mad River Complex</b>	2. Date <b>8/12/15</b>	3. Time <b>1700</b>
----------------------------	--	---------------------------	------------------------

4. Operational Period  
**DAY 08/13/15 0600 – 2100**

5. General Control Objectives for the Incident (include alternatives)  
**Strategic Framework**  
 Provide for aggressive fire suppression utilizing direct and indirect tactics and providing point protection to threatened structures within the fire area. The threat to life, property and values at risk remains high. Tactics which reflect limited firefighting resources on hand and utilizing existing control features in areas with a high probability of success should be applied. Potential for continued fire spread is high due to fuels, weather and time of season.

**Leaders Intent**  
 Provide the highest level of customer services to all involved with or impacted by the Mad River Complex. All incident assigned personnel should be prepared to take the appropriate actions regarding:

- Personal interactions internal and external to the incident management organization
- Personal safety and the safety of others
- Response to any incident-within-an-incident

**Objectives**

- Provide for Firefighter and Public safety through hazard recognition and application of the risk management process.
- Reduce the threat to private property, residences and infrastructure through the application of direct suppression tactics.
- Protect natural resources through utilization of control features that offer a high probability of success.
- Engage in fire suppression operations that are cost effective, but commensurate with values at risk.
- Protect wilderness values and botanical resources by ensuring Minimum Impact Suppression Tactics (MIST) are applied.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 23	<b>TYPE OF FIRE:</b> Wildland Fire
<b>FIRE NAME:</b> Mad River Complex	<b>OPERATIONAL PERIOD:</b> Day
<b>DATE / TIME ISSUED:</b> Aug 12, 2015 2000	<b>DATE:</b> Aug 13, 2015 Thursday
<b>UNIT:</b> Six Rivers NF / Mad River	<b>SIGNED:</b>  Steve Paes FBAN

### INPUTS

#### WEATHER SUMMARY:

Mostly sunny with high clouds late in the day.  
Max. Temperatures: 80-85 valleys, 70-75 ridges.  
Min. Relative Humidity: 20-25% valleys, 25-30% ridges.  
Wind: Slope/Valley- light and variable in the morning, becoming upcanyon/upslope 3-7mph with gusts to 15 mph.  
Ridgetop Winds- Southerly 4-8 mph becoming Southwest 8-12 mph with gusts to 20 mph.

#### GENERAL:

- The primary carrier of surface fire is heavy forest litter with a shrub or small tree understory.
- Fire spread will be primarily topography driven. Expect the predominant fire spread to be backing downhill. Roll out on steep slopes can contribute to rates of spread. Expect up to 10-20 chains of downhill progression during the shift.
- Head fire on steep slopes can transition to crown fire, especially on slopes that align with general winds.
- Anticipate torching in the afternoon.
- Smoke or clouds over the fire has had a dampening effect on fire behavior. **Smoke lifting, and clearing skies, will be an indicator that fire behavior will increase.**

**Rates of spread:** Timber-head fire = 3-12ch/hr (depending on slope), backing fire= 1-3 ch/hr.

Grass- head fire 40 ch/hr, backing fire 2ch/hr

**Flame lengths:** Timber-head fire= 8ft., backing fire= 2ft.

Grass- head fire 5ft., backing fire 1ft.

Probability of Ignition (PIG) = 50% shaded fuel, 75% exposed fuel

Short range spotting occurs with light winds and moderate fire activity. Spotting distances of up to ½ mile can occur with crown fire.

Dead fuel moisture contents: 1hr= 4%, 10hr = 6% , 100hr and 1000hr =10%

Live Fuel Moisture: Timber 150%, Shrubs 80%

**ERC=52...84<sup>th</sup> percentile      BI=41...60<sup>th</sup> percentile**

**SPECIFIC: Yesterday; columns developed on all the complexes in the area when humidity dropped below 20%**

- DIV B: The upper portions of the control line will be exposed to ridgetop winds.
- DIV D: Spotting from yesterday's fire activity could have ignited fires on steep slopes to set up uphill runs today.
- DIV E: Spotting from yesterday's fire activity could have ignited fires across control lines.
- DIV F: The fire should not move toward the Division contingency line during the shift. The fire has not been moving laterally across slopes and winds are favorable for preventing spread to the southeast.
- DIV A/G/S/W: Clear skies and low humidity could expose hot spots for mop-up.
- Lassic Fire: The fire will be exposed to ridgetop winds. The fire west of Signal Peak is expected to move to the slope south of the Peak. Active fire is approaching portions of Blanket Cr. The fire is expected to eventually cross that drainage and move north to control lines. Portions of that slope have grass fuels that have rates of spread up to 40 ch/hr.

### AIR OPERATIONS

Skies will be clear early to allow air operations early in the shift.

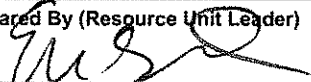

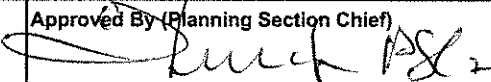

### SAFETY

Snags and stump holes are likely in timber areas.  
Snags/ trees can burn in the upper portions. Look up!  
Just because there is no fire in the lower trunk doesn't mean it's safe.

<b>6. Control Operations/Work Assignments:</b>						
Construct contingency lines in the fire area east of 01S26 Rd. system in the Forest Glen area towards the 29N58 Road system along Rattlesnake Ridge. Construct contingency from DP60 along the Little Van Duzen River to prep for future firing operations.						
<b>7. Special Instructions:</b>						
Use caution around snags and flag as needed for safety. Identify snags to be fallen with appropriate tape. Use caution while driving on all roads due to narrowing and other roadway hazards. Use caution while driving on Highway 36. <b>**DO NOT OPEN RECREATIONAL GATES ON FOREST**</b> Backhaul excess equipment and trash. Verify status of all accountable property. GPS location when moved or placed and report coordinates to supply. Utilize spill kits under Mark III pumps.  ** Personnel assigned as Rapid Extraction Module: Call sign is "REM1". Operations and Branch will determine where module will be staged during the operational period. REM1 will monitor command for emergency deployment. See Medical Plan page 4 for further details.

# SAFETY MESSAGE

Mad River Complex CA-SRF-01433

Day Shift

08/13/2015

0600-2100

## MAJOR HAZARDS:

- Driving
- Hazard Trees
- Dehydration, Heat Stress, and Fatigue
- Firing Operations

## Fire Order of the Day – Give Clear instructions and be sure they are understood.

- **Aggressive Risk Management** is our primary means of maintaining safe wildland fire operations. Consistently evaluate fireline tactics and do not hesitate to adjust tactics as environmental and human factor conditions change – **Review Risk Management Process in IRPG, page 1.**
- **Dehydration, Heat Stress, and Fatigue** - Constantly monitor your water and electrolyte intake to avoid dehydration. Dehydration and long work hours, coupled with poor air quality and high temperatures all impact fatigue. Maintain the work to rest ratio, 2:1.
- **Firing Operations Safety** - Conduct a thorough briefing for all personnel, utilize Risk Management Process (see above), wear required PPE, utilize fully qualified personnel, and maintain LCES.

## Hazardous Tree Indicators:

It's important to identify the hazardous trees in your work area before engaging.

- Strong winds
- Night Operations
- Steep Slopes
- Disease or bug-kill timber
- Trees and duff have been burning for an extended period
- High-risk tree species
- Numerous down trees
- Dead or broken tops and limbs overhead
- Accumulation of downed limbs
- Leaning or hung-up trees
- Look up, Look Down, Look Around
- After identifying the hazard trees: look for hazard control measures to mitigate your risks. IRPG pgs. 22 & 23

## Driving & Fatigue

- Fatigue can cause us to mentally stray from the driving task. The roads on the Six Rivers National Forest are very unforgiving.
- It only takes a second of distraction to lose control of our vehicle. The faster you are traveling, the faster you get in trouble.
- Make sure you recognize when you are too tired to drive!
- Don't tough it out and put yourself and your passengers at risk!
- Slow down, take breaks, and talk to your passengers. If possible, keep an alert passenger in the front seat next to you. Know your limits.
- Follow posted speed limits or slower: 25 MPH through Ruth & other communities, wear your seat belt & watch for wildlife, children, and cows.

**Safety Officers:** Marty Hamel, Charlotte Jordan, Dave Morton, Dave Vitwar 

**Day Shift Safety Officers:** Pete Mourtsen, John Martinez, Tony Rivers, Ron Sass, John Foley, Robert Martin, Shawn Duggar & Gary Sexton

Initiate care with available resources at scene and notify DIVS when an injury occurs.

The DIVS, or designee, shall coordinate the incident and direct necessary actions. Take the following actions:

1. Determine the nature of the emergency.
2. If the emergency is a medical injury/illness, determine if the injury/illness is life threatening.
3. If the injury is life threatening, then clear designated frequency for emergency traffic.
4. Identify the on-scene point of contact by position.
5. Contact the Medical Unit Leader immediately.
6. Identify number injured, patient assessment(s) and location (geographic and/or GPS coordinates).
7. Identify on-scene medical personnel by position and last name (i.e. EMT Jones).
8. Identify preferred method of patient transport.
9. Determine any additional resources or equipment needed.

Continually evaluate the Evacuation Plan, develop contingencies in the event the first plan is not effective.
