**Today's discussion is from the LCES (Lookouts, Communication, Escape Routes, Safety Zones) Category.**

**DRIVING SAFETY**

Seat belts save lives. Worn properly, they prevent you from being thrown around the inside of a crashing vehicle or, worse, thrown through the windshield and flung completely out of the vehicle.

If you're experiencing bad visibility, either from fog or smoke, and you end up off the side of the road (intentionally or otherwise), turn off your lights. Drivers who can't see the road will be looking for other cars to follow along the highway. When they see your lights, they'll drive toward you and may not realize you're not moving in time to avoid a collision.

Safe driving guidelines advise drivers to keep a safe distance between themselves and the car ahead. Drivers need enough time to react if that car makes a sudden turn or stop.

As the old public service campaign so succinctly put it, "Speed kills." Research has shown that for every mile per hour you drive, the likelihood of your being in an accident increases by four to five percent. At higher speeds, the risk increases much more quickly.

Many states in the U.S. have passed laws that ban the use of cell phones while driving. The reason is the number of deaths attributed to this seemingly harmless activity.

It isn't just cell phones that cause distractions, however. Eating, fiddling with electronic devices or interacting with passengers also diverts a driver's attention in potentially deadly ways.

Safe driving guidelines advise drivers to keep a safe distance between themselves and the car ahead. Drivers need enough time to react if that car makes a sudden turn or stop.

Before making any turn, whether onto another roadway, a parking lot, another traffic lane, or leaving a parked position, it is important that you signal. Your signal lets other drivers, and pedestrians know your intentions.

### INPUTS

**WEATHER SUMMARY:** See Attached Fire Weather Forecast

### OUTPUTS

#### FIRE BEHAVIOR

##### Day Shift

Relative Humidity will be single digits (11-15% valleys, ridges 9-14%) with unstable conditions and again a very weak overnight recovery. Temps will be similar to the previous day (valley bottom 92-96) (ridgetops 86-90) Wednesday will see slight cooling, but still very dry. Winds today will be a bit stronger than yesterday up-slope, up-valley 6-12 with gusts to 15, Ridgetop winds will be Northeast 4-8 becoming northwest 10-15 after 1500. Surface fire and individual tree/group tree torching can be expected as the fire continues to back into the valley bottoms. Interior portions of the fire will continue to increase in activity as the day progresses and will become active in areas of spotty burning. Continued consumption of subsurface fuels on all divisions resulting in deep holes and possible ash pits. The fire is burning primarily in a fuel model 2, 8 and 10, and generally, there will be a high probability of spotting outside of control lines where slope and fuels align (upslope spread) or downwind of any significant column development. (spotting of .2 miles).

##### Night Shift All Divisions:

Expect active burning through the nighttime hours as poor humidity recovery will enable active spread. Primarily backing fire spread into the Pilot creek drainage (spread rates low <1 ch/hr, and flame lengths will be low <2 feet). Closely monitor the pilot creek drainage for possible upslope runs. Up-slope runs are possible and will produce single to group tree torching should slope and fuels align.

Energy Release Component (ERC) is 59 and is in the 91 percentile, 1000 hour (heavy) fuels are calculated at 8-10%. Live woody is 2/3 cured and is becoming available to burn. Fire will carry through deciduous species when supported by concentrations of ground fuels in exposed areas (except north aspects). **Probability of ignition will be near 88%**

#### Indicators for Increased Fire Activity

**Relative Humidity <19%, Winds >6mph, Temperatures >90F, 1000 fuel moistures <14%,**

#### FIRE BEHAVIOR

##### Day shift

**Division A,** Expect an increase in backing fire spread and be on the look-out for slope reversal in the lower part of the drainage as fire will increase in activity than what has previously been occurring. Expect any upslope spread to aggressively seek ridgelines. Burn out operations should take advantage of downslope winds in the late afternoon evening hours as fuels are at the lowest moistures and humidity's are on the rise. Expect some short range spotting 0.75 miles. Interior portions will continue to burn and produce spotting possibly compromising control lines. Winds will shift and come out of the west around 1500 producing favorable conditions for firing operations.

**Division C,D E:** Expect continued backing fire into the Pilot Creek drainage. Post lookouts and pay attention as any fire established below the dozer line along the division as the fire will aggressively seek ridgelines and you can expect intense surface fire, individual group tree torching and short duration crown runs. Pay particular attention Happy Jack Springs, holm buttes, and Salt Ground areas as modeling indicates that these are the areas that have the highest potential to be impacted. **Ridgetop winds will be favorable, however upslope up valley winds will be the dominating factor until around 1500 when the wind shifts to a more westerly flow.**

**Division F,H,W:** Persistent burning in the heavies will hamper mop-up operations. Un-burned areas in the interior portions of the fire will become active and produce spotting and with the un-favorable winds in the afternoon will cause smoke to drift across control lines. Un-detected spot fires should become evident due to the low humidity and hot temps. If Any spot fire gets established outside of the control line it will become active and have the potential to exceed hand tool capability.

**Division N,P:** Smoldering and creeping in all areas across the divisions as the day progresses. Persistent burning due to the low fuel moistures and heavy fuels may present control problems. Interior portions of the fire will see an increase in fire activity. Spotting potential is high.

#### AIR OPERATIONS:

Moderate inversion will affect air operations, but should begin to dissipate around 1200. Smokey conditions will hamper air operations and should be a bit lighter than the previous day.

**SAFETY DO NOT GET COMPLACENT,** Pay attention to what your fire is doing, how it responds to changing conditions, and anticipate what the fire behavior potential could be!

## Fire Danger Rating Area 130 Energy Release Component

## Fire Danger Rating Area 130 Burning Index

- \* Fire Danger Areas 130
- \* Mad River Ranger District
- \* Six Rivers National Forest
- \* NW CA - Region 5

### Weather Stations Used (NWCG Standards):

- \* 040507 Mad River
- \* 040508 Ruth

### Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 6 mph; RH less than 19%; Temperature over 90; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 46 and when ERC exceeds 48.

### Graph Interpretation, Energy Release Component:

Maximum = Highest ERC by day for 2003-2014  
Average = Shows Peak Fire Season  
60% = 60th Percentile means 40% of days studied had an ERC above 48.

### PAST EXPERIENCE | LOCAL KNOWLEDGE:

Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres). Large fires become more frequent when 1000 hour fuel moistures drop below 14, when BI exceeds 46, and when ERC exceeds 48 (large fires can and do occur at lower indices)

Afternoon winds W/NW along Ruth Lake Corridor greatly influence direction of fire spread in the area.  
South Fork Mountain affects weather in the area: Funnels the wind and influences thunderstorm development and movement.

Other Watchouts not related to weather and indices; dangers associated with marijuana gardens and arson fires.

### Graph Interpretation, Burning Index:

Maximum = Highest BI by day for 2003-2014  
Average = Shows Peak Fire Season  
60% = 60th Percentile means 40% of all days studied had a BI above 46

**Route Complex**  
**Safety Message**  
Tuesday August 18, 2015  
**Driving & Transition**

Driving continues to be the most dangerous risk we take every time we drive on the road. From 1999 to 2009 48% of fatalities were from driving. It is critical that you get there safely. Here are some ways:

- Practice “Defensive Driving” techniques traveling on all roads
- **Always buckle up for safety/wear safety belts**
- **Always use headlights**
- Honk horn to alert personnel when backing
- Be aware of poor visibility from dust and smoke
- Follow 3 second rule of following distance when driving
- Use chock blocks, turn wheels into hill. Use low gears on steep ground.

There is a change coming as we gain more folks into the camp. You may experience new ground and people and longer lines. Patience is a great attribute.

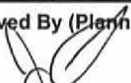

Transition is a constant in the fire equation. Keep up your Situational Awareness. Safety balances change. Slow is fast.

**Medical Emergency Procedures**

Upon occurrence of a "Major Medical" or accident involving significant injury on the fire line, the closest DIVS should respond directly to the scene to take control of the situation and direct necessary actions. If the DIVS is unavailable, the nearest fire line supervisor or leader needs to take charge.

- Route Communications will clear all radio traffic on the Incident Command Channel-use to coordinate response as needed.  
Do Not Use Names. Identify: 1) The on-scene Point Of Contact (i.e. TFLD Smith); 2) Describe the nature of the accident/illness.
- Obtain and facilitate nearest Medical Care Provider to the scene. On Scene IC is in charge of the scene.  
Identify to Communications the name of the On Scene Point of Contact and Medical Care Provider on site.
- Check nature of the problem, # of patients, status, vitals, mechanism of injury & location. (GPS if possible) Request additional resources if needed.
- Report the Severity of the Injury/Illness: Red, Yellow, Green.
- Coordinate and facilitate appropriate transportation for patient(s) according to severity. Medical Care Provider in charge of patient(s).
- Request additional resources / equipment as needed.
- Inform Communications of any changes on scene for Point Of Contact / Medical Care Providers.
- Identify the evacuation location. Remove all unnecessary personnel from the scene. Secure scene, identify witnesses for later investigation. Keep a log.

**LIFE SAFETY IS THE NUMBER 1 PRIORITY ON THIS INCIDENT**

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER: 33</b>	<b>TYPE OF FIRE: Wildland Fire</b>
<b>FIRE NAME: Mad River Complex</b>	<b>OPERATIONAL PERIOD: Day</b>
<b>DATE / TIME ISSUED: Aug 17, 2015 2000</b>	<b>DATE: Aug 18, 2015 Tuesday</b>
<b>UNIT: Six Rivers NF / Mad River</b>	<b>SIGNED: _____</b> <b>Steve Paes FBAN</b>

### INPUTS

#### WEATHER SUMMARY:

Sunny at high elevations, becoming smoky.  
Max. Temperatures: 95-105 valleys, 85-95 ridges.  
Min. Relative Humidity: 7-14% (see fire weather forecast for detailed discussion of RH)  
Wind: Slope/Valley- light and variable in the morning, becoming upcanyon/upslope 5-10mph.  
Ridgetop Winds- Variable 2-4 mph increasing to 7-12 mph with gusts to 18 mph in the afternoon.

#### GENERAL:

-The primary carrier of surface fire is heavy forest litter with a shrub or small tree understory.  
-Fire spread will be primarily topography driven.  
-Fire on steep slopes can transition to crown fire.  
-Smoke over the fire has had a dampening effect on fire behavior. **Clear skies will be an indicator for increasing fire behavior.**

**Rates of spread:** Timber-head fire = 3-14ch/hr (depending on slope), backing fire= 1 ch/hr. Crown fire 20 ch/hr.

Grass (Lassic Fire)- head fire 30-50 ch/hr, backing fire 3ch/hr

**Flame lengths:** Timber-head fire= 9ft., backing fire= 2ft.

Grass (Lassic Fire)- head fire 6ft., backing fire 2ft.

Probability of Ignition (PIG) = 100% Fuels are receptive to spotting.

Short range spotting occurs with light winds and moderate fire activity. Spotting distances of up to ½ mile can occur with crown fire.

Dead fuel moisture contents: 1hr= 2% exposed fuel 5% shaded fuel, 10hr = 4% , 100hr and 1000hr =10%

Live Fuel Moisture: Timber 150%, Shrubs 80%

**ERC=59...91st percentile....trending higher BI=59...94th percentile**

#### SPECIFIC:

-36 GROUP: Expect smoke all shift that will prevent support from Air Ops. Rolling material, snags and fire weakened green trees are hazards in all portions of the fire, including those in patrol status. Steep embankments along Hwy. 36 will be especially hazardous for rollout and a risk for material to get below the road. Spot fires below Hwy. 36 could cause torching if ladder fuels are present.

LASSIC GROUP- **Expect active fire behavior the entire shift**, especially if smoke clears, that includes group tree torching and short crown runs. Islands burning out have the potential for spotting across containment lines. Smoke may prevent support from Air Ops.

-DIV CC: Fire spread will be toward Signal Peak with some backing toward Little Van Duzen River. Spread will be toward the 01S07 Road if fire reaches the west slopes south of Red Lassic. The slopover east of the 1S07 road should have downhill backing fire with interior torching, creating the potential for more spotting. Fire activity has the potential to prevent movement of resources on the 01S07 Road

-DIV JJ/LL: Extreme fire behavior is possible if we get slope reversal by the fire crossing the Little Van Duzen Rv. Uphill headfire would transition to torching, short crown runs, and spotting. Fire activity along the 01S07 Road could prevent the movement of resources to or from your Divisions.

### AIR OPERATIONS

Smoke is predicted to prevent Air Ops, but portions of the fires could clear during part of the shift.

### SAFETY

SOME INDICATORS OF EXTREME FIRE BEHAVIOR:

- Trees crowning out inside the fireline.
- Smoldering fires beginning to burn actively.
- Increased spotting.

**Mad River Complex**  
**Safety Message**  
Tuesday August 18, 2015  
**Transition**

Transition is change. Change is here. Change in location, camp and personnel. When change takes place communication is the key to keep safety on track. Effective communication is a critical backbone of safe and successful operations. Share information, emphasize LCES, Situational Awareness and understand your assignment.

**The five communication responsibilities for all fire fighters**

- Brief others
- Debrief your actions
- Communicate Hazards to others
- Acknowledge messages
- Ask if you don't know

Keep a continuous information flow to prevent guess work, such as, updates on weather, fire behavior, work progress, changes in strategy and tactics, resource changes and solicit feedback.
