4. OPERATIONAL PERIOD (DATE/TIME)
8/12-13/15 0800 – 0800

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)

Management Objectives

Firefighter Safety:

- Use the risk analysis process to manage risk and maintain safety of firefighters. Weigh firefighter exposure with the probability of success when implementing suppression actions.

Provide for the safety of the public through a risk assessment process and implementation of actions such as:

- Protect homes, valuable structures and infrastructure from damage or loss.
- Evacuation of Hyampom and surrounding areas where a threat of the fire to their well-being exists.
- Road and area closures.
- Smoke issues - Consider setting up air quality monitors in the town of Hyampom to monitor smoke impacts

Pilot Ridge / South Fork Mountain Archaeological Resources:

- Minimize impacts to cultural resources.
- Assign Line Qualified Archaeologists to Divisions where dozers are working/planned.

South Fork Trinity River:

- This is 1 of only 2 rivers with a Spring Run of the listed anadromous species Chinook and is the largest undammed river in the area. Minimize impacts to water quality to the best extent possible.

Public Information:

- Provide timely, accurate and appropriate information to the public, partners, cooperators and internal organization. Mitigations and intent will be clear and communicated to the affected public and cooperators and assisting agencies.

Minimize the spread of invasive weeds such as spotted knapweed, diffuse knapweed, and yellow starthistle. Knapweed occurrences are not yet widespread on Six Rivers and the South Fork/Pilot Creek (east) is one of the very few areas with occurrences. Occurrence of these within the fire perimeter:

- 2N17 - spotted knapweed (CEMA4), thousands of plants, extends down road.
- 2N18 - diffuse knapweed (CED1), yellow starthistle (CESO3), spotted knapweed (Route 1); various occurrences.

Per Invasive Plant Best Management Practices, when possible:

- Equipment cleaning before coming onto the fire.
- Avoid use of 2N17 and 2N18.
- If avoidance is not an option and equipment is slated to work elsewhere in the area, see Forest staff about equipment cleaning.

Control Objectives

For Blake, Kerlin, Johnson, Hitchcock, Chance Keep Fire:

- East of the Mad River to Board Camp Mountain to Cow Creek
- North of the Mad River and Sulphur Glade Ridge
- West of the South Fork of the Trinity River
- South of Grouse Creek

For Buck/Jack, Tierney Keep Fire:

- East of Swayback Ridge
- North of Shanty Creek
- South and West of the Van Dusen River

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 9	TYPE OF FIRE: Wildland Fire
FIRE NAME: Route Complex	OPERATIONAL PERIOD: Day/Night
DATE / TIME ISSUED: Aug 11, 2015 2000	DATE: Aug 12, 2015 Wednesday
UNIT: Six Rivers NF / Mad River	SIGNED:  Drew Smith FBAN So. Cal Team 1

INPUTS

WEATHER SUMMARY: *Stronger Southerly winds this afternoon.*

Daytime: Mostly cloudy in the morning becoming partly cloudy with hazy conditions. ****Night time See Spot forecast****
 Temps: around 70°
 RH: = around 35%.. Eye level Wind = Southeast 9-12 mph.... becoming Southwest 7-10 mph with some stronger gusts to 15 mph. ..Ridgeline winds from the South 15 -20mph *transitioning*...Southeast around 25 mph in the afternoon.
ERC = 56

GENERAL:

The fire is burning timber Fuels with some brush and grass intermix. Manzanita, Mixed Pine, Cedar and Douglas Fir are throughout. Live Fuel Moisture = Timber 150% Shrubs 80%. There is mortality in the aerial fuels that will contribute to torching. Rollout has been a significant factor in fire progression.
 The fire to date has been primarily topography driven. The predominant factor of fire spread has been consistently surface fire spread backing, flanking transitioning to head fire alignment. Torching and short duration crown fire runs may develop with slope and wind alignment. Low dead fuel moisture contents are the driver behind continuous fuel consumption. Past significant runs were with slope and wind alignment .Sustained crown fire runs were dependent upon the surface fire and slope alignment. Recent fire activity has increased 1100 hrs – 1800 hrs.
 Rates of spread: head fire = 3-8ch/hr with backing 1-3 ch/hr.
 With strong winds ROS of 25-40 ch/hr with head fire with crown involvement.
 Spotting ½ - mile...PIG = 80% day.....10%...Night
 DFM = 10 hr = 5%100hr 7% and 1000hr =10%

SPECIFIC:

All Divisions: *The Fire has a higher potential to move today due to wind exposure!!!*

Day:

- Increased surface temperature of fuels will allow the fire to be more aggressive today...
- Understory surface fire spread with backing and flanking fire is within the threshold of control to go direct.
- Tree torching will occur today, heads up with wind and sun exposed in the crown.
- **Slope reversal** look for the fire to transition to headfire alignment *Headfire runs will develop today*
- Spotting may develop from wind and plume up to ½- mile... also from and tree's falling over the line.
- Favorable conditions for firing operations backing into the wind

Night

- Rollout can re align this fire to move rapidly with slope.. **WX.. Temp..50...RH70%...Wind 3-5 w/G25 SE**
- Winds will create embers from stove piped trees
- Watch identify your fire getting aggressive with increased winds..

AIR OPERATIONS

May be limited due to wind smoke and haze.
 Sunrise= 0620 Hrs and Sunset 2018 Hrs.

SAFETY

Validate your time to safety zones.... so know what you fire is doing at all times....
 Identify when your fire has the ability re-position itself to run upslope with headfire.
 Monitor fire activity tree torching and ember cast can be more prevalent today
 STOP.....Stop Think Observe and Predict...
 Keep P.A.C.E in you engagement tool kit.. **P** Primary Plan, **A**lternative Plan, **C**ontingency Plan, **E**mergency Plan.
Time your escape routes...validate as the fire moves.

- * Mad River Ranger District
- * Six Rivers National Forest
- * NW CA - Region 5

Weather Stations Used (NWCG Standards):

- * 040507 Mad River
- * 040508 Ruth

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 6 mph; RH less than 19%; Temperature over 90; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 46 and when ERC exceeds 48.

Graph Interpretation, Energy Release Component
 Maximum = Highest ERC by day for 2003-2014
 Average = Shows Peak Fire Season
 60% = 60th Percentile means 40% of days studied had an ERC above 48

PAST EXPERIENCE | LOCAL KNOWLEDGE:

Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ("Large fires" = 50 acres). Large fires become more frequent when 1000 hour fuel moistures drop below 14, when BI exceeds 46, and when ERC exceeds 48 (large fires can and do occur at lower indices)

Afternoon winds W/NW along Ruth Lake Corridor greatly influence direction of fire spread in the area.
 South Fork Mountain affects weather in the area: Funnel the wind and influences thunderstorm development and movement.

Other Watchouts not related to weather and indices; dangers associated with marijuana gardens and arson fires.

Graph Interpretation, Burning Index
 Maximum = Highest BI by day for 2003-2014
 Average = Shows Peak Fire Season
 60% = 60th Percentile means 40% of all days studied had a BI above 46

HEALTH AND SAFETY MESSAGE

SAFETY starts with **YOU**

We are **ALL** accountable for **SAFE** behaviors

INCIDENT: **ROUTE COMPLEX**

DATE: **August 12-2015** TIME: **Day/night 0800 - 1800**

Major Hazards and Risks:

Driving – This continues to be one of our greatest risks. Drive slower than normal on all incident roads especially during smokey conditions. Drive with headlights and seatbelts on. The speed limit on many incident roads has been significantly reduced and will be enforced. Engines and other large vehicles must use chocks when parked and a spotter when backing.

Wildlife/Livestock– Watch for deer and cattle on incident roads. They have been displaced from their normal routine and may act differently along the roads or if encountered elsewhere. Give them plenty of space.

Validation – Validate your time to safety zones...so know what your fire is doing at all times... Identify when your fire has the ability to re-position itself to run upslope with headfire.

DO NOT engage until solid LCES is established. Ensure that communications is made between adjacent forces and back to ICP Communications. Use human repeaters if necessary. All resources within a Division will use that Division's Tactical radio frequency.

Fire ground Order of the Day: Smokey conditions makes driving difficult, use extra caution.

Watch Out Situation of the Day

The best way to learn to be good to yourself, is to practice being good to others!

“To every person there comes a time in life, that special moment, when they are figuratively tapped on the shoulder and offered the chance to do a very special thing, unique to them and fitted to his or her talent. What a tragedy if that moment finds them unprepared or unqualified for the work which would be their finest hour.”
-Winston Churchill
