4. OPERATIONAL PERIOD (DATE/TIME)
8/13-14/15 0800-0800

5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)

Management Objectives

Firefighter Safety:

- Use the risk analysis process to manage risk and maintain safety of firefighters. Weigh firefighter exposure with the probability of success when implementing suppression actions.

Provide for the safety of the public through a risk assessment process and implementation of actions such as:

- Protect homes, valuable structures and infrastructure from damage or loss.
- Evacuation of Hyampom and surrounding areas where a threat of the fire to their well-being exists.
- Road and area closures.
- Smoke issues - Consider setting up air quality monitors in the town of Hyampom to monitor smoke impacts

Pilot Ridge / South Fork Mountain Archaeological Resources:

- Minimize impacts to cultural resources.
- Assign Line Qualified Archaeologists to Divisions where dozers are working/planned.

South Fork Trinity River:

- This is 1 of only 2 rivers with a Spring Run of the listed anadromous species Chinook and is the largest undammed river in the area. Minimize impacts to water quality to the best extent possible.

Public Information:

- Provide timely, accurate and appropriate information to the public, partners, cooperators and internal organization. Mitigations and intent will be clear and communicated to the affected public and cooperators and assisting agencies.

Minimize the spread of invasive weeds such as spotted knapweed, diffuse knapweed, and yellow starthistle. Knapweed occurrences are not yet widespread on Six Rivers and the South Fork/Pilot Creek (east) is one of the very few areas with occurrences. Occurrence of these within the fire perimeter:

- 2N17 - spotted knapweed (CEMA4), thousands of plants, extends down road.
- 2N18 - diffuse knapweed (CED1), yellow starthistle (CESO3), spotted knapweed (Route 1); various occurrences.

Per Invasive Plant Best Management Practices, when possible:

- Equipment cleaning before coming onto the fire.
- Avoid use of 2N17 and 2N18.
- If avoidance is not an option and equipment is slated to work elsewhere in the area, see Forest staff about equipment cleaning.

Conduct firing operations to minimize high severity fire and the unwanted effects to vegetation and soil.

Control Objectives

For Chance and Johnson Keep Fire:

- East of the Mad River to Board Camp Mountain to Cow Creek
- North of the Mad River and Sulphur Glade Ridge
- West of the South Fork of the Trinity River
- South of Grouse Creek

For Buck Keep Fire:

- East of Swayback Ridge
- North of Shanty Creek
- South and West of the Van Dusen River

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 10	TYPE OF FIRE: Wildland Fire
FIRE NAME: Route Complex	OPERATIONAL PERIOD: Day/Night
DATE / TIME ISSUED: Aug 12, 2015 2000	DATE: Aug 13, 2015 Thursday
UNIT: Six Rivers NF / Mad River	SIGNED:  Drew Smith FBAN So. Cal Team 1

INPUTS

WEATHER SUMMARY: *Stronger Southerly winds this afternoon.*

Daytime: Partly cloudy with hazy conditions. ****Night time See Spot forecast****

Temps: around 70°

RH: = around 33%.. Eye level Wind = Southeast 5 mph.... becoming Southwest 5-8 mph with some stronger gusts..Ridgeline winds from the South up to 18 mph in the afternoon.

ERC = 55

GENERAL:

The fire is burning timber Fuels with some brush and grass intermix. Manzanita, Mixed Pine, Cedar and Douglas Fir are throughout. Live Fuel Moisture = Timber 150% Shrubs 80%. There is mortality in the aerial fuels that will contribute to torching. Rollout has been a significant factor in fire progression.

The fire to date has been primarily topography driven. The predominant factor of fire spread has been consistently surface fire spread backing, flanking transitioning to head fire alignment. Torching and short duration crown fire runs may develop with slope and wind alignment. Low dead fuel moisture contents are the driver behind continuous fuel consumption. Past significant runs were with slope and wind alignment .Sustained crown fire runs were dependent upon the surface fire and slope alignment. Recent fire activity has increased 1100 hrs – 1800 hrs.

Rates of spread: head fire = 3-8ch/hr with backing 1-3 ch/hr.

With strong winds ROS of 25-40 ch/hr with head fire with crown involvement.

Spotting ½ - mile...PIG = 80% day.....10%...Night

DFM = 10 hr = 5%100hr 7% and 1000hr =10%

SPECIFIC: All Divisions:

Day:

- Increased surface temperature of fuels will allow the fire to be more aggressive today...
- Understory surface fire spread with backing and flanking fire is within the threshold of control to go direct.
- Tree torching will occur today, heads up with wind and sun exposed in the crown.
- **Slope reversal** look for the fire to transition to headfire alignment *Headfire runs will develop today*
- Spotting may develop from wind and plume up to ½- mile... also from and tree's falling over the line.
- Favorable conditions for firing operations backing into the wind

Night

- Rollout can re align this fire to move rapidly with slope.. **WX.. Temp..50...RH80%...Wind 3-5 w/G12 W**
- Winds will create embers from stove piped trees
- Watch identify your fire getting aggressive with increased winds..

AIR OPERATIONS

May be limited due to wind smoke and haze.

Sunrise= 0620 Hrs and Sunset 2018 Hrs.

SAFETY

Validate your time to safety zones.... so know what you fire is doing at all times....

Identify when your fire has the ability re-position itself to run upslope with headfire.

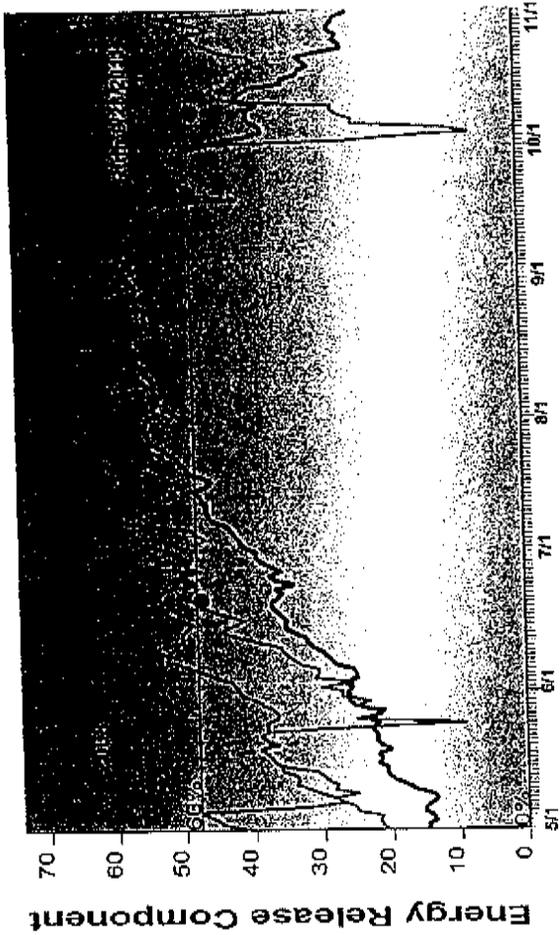

Monitor fire activity tree torching and ember cast can be more prevalent today

STOP.....Stop Think Observe and Predict...

Keep P.A.C.E in you engagement tool kit.. **P**rimary Plan, **A**lternative Plan, **C**ontingency Plan, **E**mergency Plan.

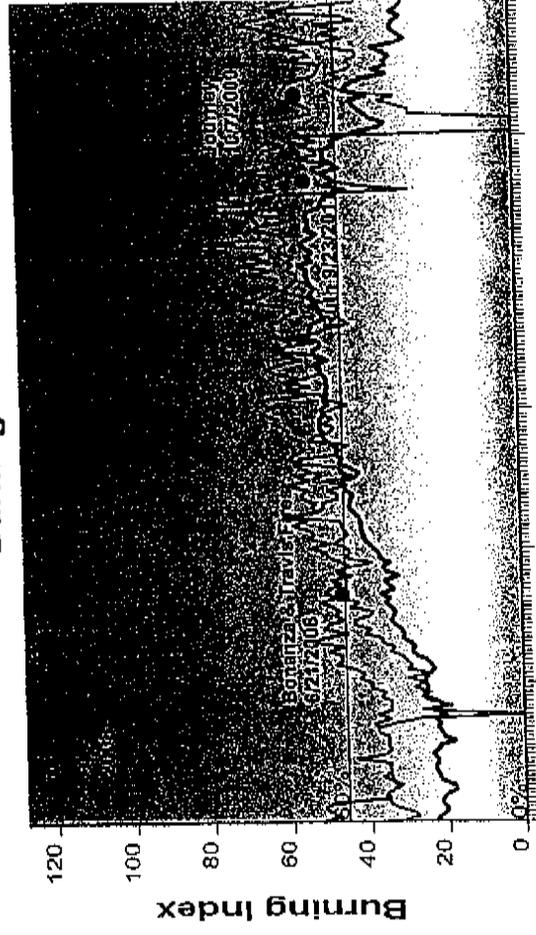

Time your escape routes...validate as the fire moves.

- * Mad River Ranger District
- * Six Rivers National Forest
- * NW CA - Region 5

Weather Stations Used (NWCG Standards):

- * 040507 Mad River
- * 040508 Ruth

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 6 mph; RH less than 19%; Temperature over 90; 1000-hour Fuel Moisture less than 14. Large fires become more frequent when BI exceeds 46 and when ERC exceeds 48.

Graph Interpretation: Energy Release Component
 Maximum = Highest ERC by day for 2003-2014
 Average = Shows Peak Fire Season
 60% = 60th Percentile means 40% of days studied had an ERC above 48.

PAST EXPERIENCE | LOCAL KNOWLEDGE:

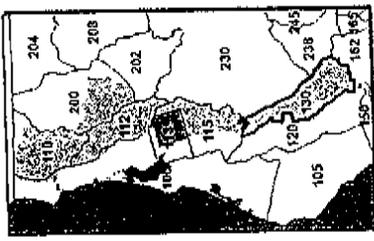

Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility ('Large fires' = 50 acres). Large fires become more frequent when 1000 hour fuel moistures drop below 14, when BI exceeds 46, and when ERC exceeds 48 (large fires can and do occur at lower indices)

Afternoon winds W/NW along Ruth Lake Corridor greatly influence

direction of fire spread in the area. South Fork Mountain affects weather in the area: Funnel the wind and influences thunderstorm development and movement.

Other Watchouts not related to weather and indices; dangers associated with marijuana gardens and arson fires.

Graph Interpretation: Burning Index
 Maximum = Highest BI by day for 2003-2014
 Average = Shows Peak Fire Season
 60% = 60th Percentile means 40% of all days studied had a BI above 46.

INCIDENT: CA-SRF-1476

DATE: 8/13/15

TIME: 0800-0800 DAY/NIGHT

Major Hazards and Risks:

- Falling snags, drought stress trees and bug kill trees.
- Working with and around multiple helicopters and fixed wing aircraft.
- Driving and vehicle operations on all roads to and from fire area.
- Excessive speeds for road conditions.
- Hiking in rough and steep terrain.
- Firefighter fatigue and dehydration in changing weather conditions.
- Rolling material.

Narrative:

S0-Cal IMT Team 1 requires a safety briefing with your crew. Remember to work safely around and under helicopters and fixed wing aircraft. Watch out for rolling material and maintain proper spacing between crew members. Hydrate early and often. While driving to and from the incident, keep headlights on, seatbelts on and speeds down. Human Resource Message

The Fire Community has many varied cultures that work together to bring closure to an incident. These cultures have unique and subtle differences.

We ask all firefighter's to understand and respect these cultures and remember that all of us have a common goal of bringing the fire to closure in a safe and efficient manner.

Just for today

- Do not have expectations about how you should be treated
- Be as friendly as you can to the people around you
- Do not insist that everything you do is perfect
- Be grateful for your health, your work, your family, your country

**When you know who you are;
when your mission is clear and you
burn with the inner fire of unbreakable will;
no cold can touch your heart;
no deluge can dampen your purpose.
You know that you are alive. -Chief Seattle-**
